Summary

Detail-oriented Data Analyst with 3+ years of experience in analyzing financial and operational data to drive business decisions. Proficient in Python, SQL, and Tableau, with hands-on experience automating data extraction, developing dashboards, and improving data accuracy. Strong background in working with parking revenue systems (JMS, JDE) to ensure precise financial reporting and operational efficiency.

Education

Metropolitan State University, BSc in Computer Science

- GPA: 3.81/4.0
- **Google Data Analytics** [Certificate Link](#)
- **Coursework:** Statistics, Discrete Mathematics, Probability, Calculus I and II, Database Management, OOP, Algorithm and Data Structures, Discrete Structures, , Operating Systems, Networks and Security

Technologies

Languages: Python (Pandas, NumPy, Scikit-learn), SQL, Java

Tools: Tableau, Power BI, PostgreSQL, PowerMySQL, JDE, Canva

Work Experience

Data Analyst, ABM

Dec 2021 – Present

- Analyzed and reconciled parking revenue data using **SQL** and **Oracle PL/SQL**, ensuring accurate financial reporting and data integrity.
- Created interactive dashboards in **Tableau** to visualize key performance indicators (KPIs), revenue trends, and operational efficiency for stakeholders.
- Automated data extraction from **JMS (Janus Management System)** using **Python** and Excel, significantly improving reporting speed and accuracy.
- Maintained and optimized **relational databases** to support data integration, compliance, and financial audits.
- Leveraged **JD Edwards (JDE)** to manage financial transactions, operational data, and reporting workflows.
- Collaborated cross-functionally with finance, operations, and IT teams to develop actionable, data-driven business insights.
- Presented clear, visual storytelling using data to support decision-making at the leadership level.
- Participated in **Agile** workflows, performed system testing, and tracked project tasks using **Jira**.
- Demonstrated strong communication, curiosity, and problem-solving skills in a dynamic, fast-paced environment.

Software Engineer Intern, A2SV

Jan 2021 – Mar 2021

- Developed Atrons App, a cross-platform application using **Vue.js (web)** and **Flutter (mobile)**.
- Designed and implemented the backend infrastructure using **Node.js**, **Express.js**, and **MongoDB**.
- Optimized code similarity detection in a large codebase, reducing computation time from $O(n^2)$ to $O(n \log n)$.

Projects

Optimal Character Recognition Model

- Developed an OCR system using **Python** on the EMNIST dataset.
- Experimented with CNN, SVC, and KNN, identifying CNN as the most accurate.

Memegram

- Developed an Android app using **Kotlin**, integrated with Firebase for real-time data storage.
- Implemented a custom machine learning model for meme recognition, enhancing user experience.
