

Navya Vejalla

Education

Master of Science in Information Technology Jan 2024 – May 2025

University of North Carolina at Charlotte, NC GPA: 4.0

Technical Skills

Languages: C#, Java, Python

Frontend/Backend: HTML, CSS, JavaScript, React, Angular, Node.js, Spring Boot, .NET, Kafka, Hibernate, REST APIs

Databases: MySQL, Cassandra, MongoDB, PostgreSQL, PL/SQL

DevOps & Tools: Docker, Jenkins, Git, GitHub, AWS, GCP, Azure, Kubernetes, Jira, CI/CD Pipelines

Testing: JUnit, Mockito, Mocha, Chai

AI Integration: Recommender systems, behavior-based analytics

Certifications: Certified Solutions Architect (SAA-C03)

Professional Experience

Associate Software Engineer *June 2025 – Present*

What Pumpkins , Charlotte,NC

Developed and deployed

Java Spring Boot microservices

on

AWS EC2

, ensuring reliable RESTful API communication across distributed systems

Configured and maintained

AWS services

such as

EC2, S3, CloudFront, IAM, and VPC

to support secure, high-performing web applications.

Monitored and optimized application performance using

AWS CloudWatch

, implementing alerts and logs to minimize downtime and enhance stability.

Graduate Teaching Assistant *August 2024 – May 2025 University of North Carolina at Charlotte , Charlotte,NC*

Contributed to the development and enhancement of

Hire-A-Niner

, the university's on-campus job search and career services platform, partnering with faculty and student teams to deliver new features.

Built and maintained

backend services

using

Java, Spring Boot, and microservices

, enabling scalable support for job postings, applications, and employer–student interactions.

Designed and implemented

REST APIs

for seamless communication between modules and external systems.

Integrated

Kafka

to handle real-time data streams, improving event-driven communication and system responsiveness.

Applied

Spring Security

for authentication and role-based access, ensuring secure handling of student and employer data.

Utilized

SQL

for efficient data management, reporting, and query optimization.

Mentored students by reviewing code, explaining backend concepts, and guiding them in implementing features on the Hire-A-Niner platform.

Software Development Engineer *January 2023 – January 2024 Pearson, Chennai, India*

Designed and implemented

scalable modules

for Connexus and Buzz LMS using

Java, Spring Boot, and microservices

, streamlining content management workflows for

100K+ students and teachers

.

Built

high-performance backend services

with

RESTful APIs

and

Cassandra DB

, supporting

millions of transactions per week

with low latency.

Applied

Spring Data JPA

for database interactions across relational systems such as

PostgreSQL/MySQL

, improving data consistency and reducing query response times by

20%

.

Engineered

cloud-native solutions

on

Azure

using

App Services, Blob Storage, and Key Vault

, achieving

99.9% application availability

.

Strengthened quality by writing

unit and integration tests

with

JUnit and Mocha

, raising automated test coverage to

85%

and reducing regression defects by

30%

.

Enforced code quality gates with

SonarQube

and optimized pipelines with

Jenkins

, improving release cycle efficiency by

15%

.

Partnered with cross-functional teams in an

Agile environment

to design new LMS features, contributing to a

12% YoY increase in platform-driven revenue

.

Software Development Engineer *September 2021 – January 2023*

Wipro Technologies, Bangalore, India

Developed the

GDSN Connector

, a backend solution using

Java, Spring Boot, and event-driven microservices

to collect and classify supplier data across

25+ countries

, improving data availability for internal teams.

Built

scalable APIs

and implemented efficient data storage with

MySQL

, reducing supplier onboarding time by

30%

and manual classification by

40%

.

Developed reusable

React.js components

to visualize supplier data—including nutrient info and compliance attributes—in a clear, user-friendly format for store teams.

Improved

system performance

by optimizing

SQL queries

and implementing

caching strategies

, reducing data fetch time by

40%

.

Integrated

Spring Security

for authentication/authorization and applied

JUnit/Mockito

for automated test coverage, improving pipeline reliability and cutting post-release defects by

25%

.

Containerized services with

Docker

and gained exposure to

Kubernetes (GKE)

for orchestrated deployments.

Integrated

Kafka

for real-time supplier data streaming, enhancing traceability and supporting operational

decisions that boosted catalog-driven revenue.

Projects

Personal Budget Application *August 2024 – December 2024*

Designed and developed a

responsive budgeting tool

using

React

and

Material-UI

to help users track expenses and gain actionable financial insights.

Integrated

D3.js visualizations

to display real-time income and spending trends, improving user decision-making and engagement.

Secured user data through

Firebase OAuth 2.0

and

multi-factor authentication

, enhancing trust and preventing unauthorized access.

Implemented an

AI-driven categorization system

to analyze spending behavior and recommend personalized budget optimizations.

Photo Sharing Application *January 2024 – May 2024*

Built a

scalable photo-sharing platform

using

React

for the front end and

Node.js/Express

for backend services, enabling smooth and responsive user experiences.

Developed

RESTful APIs

and implemented a

Master-Detail UI pattern

for intuitive navigation across user profiles and photo galleries.

Experimented with

AI-driven content tagging

to auto-suggest photo tags, improving searchability and content organization.

Secured user data with

password hashing and salting

, while enhancing engagement through interactive features like

likes, activity feeds, and personalized user profiles

.
