EDUCATION

California State University, Fullerton

Fullerton, CA

Bachelor of Science in Computer Science — GPA: 3.22

Jan. 2022 – May 2026

- Relevant Coursework: Algorithms, Files and Database, Object Oriented Programming, Software Engineering, Data Structures, Data Analysis, Linear Algebra, Calculus II, Mathematical Statistics

JOB EXPERIENCE

Data Engineering Intern, RB Global | *Python, SQL, Snowflake, CI/CD, PowerShell* June 2025 – Aug. 2025

- Automated SSL/TLS certificate generation and verification pipelines, eliminating roughly 90% of manual effort and improving operational efficiency by over 100%, with near-zero human intervention.
- Designed and deployed scalable ETL pipelines using Python and Snowflake APIs to automatically log and retrieve certificate data, reducing query response times by 40% and ensuring secure, centralized data access across teams.
- Developed and deployed Python/PowerShell ETL workflows using CI/CD pipelines, collaborating with engineers to ensure stable and efficient operations, reducing deployment time by 30%.

Operations and Marketing Coordinator, ARA Inspections Services Jan. 2018 – June 2024

- Built and maintained Excel-based operational dashboards and PivotTables to track \$250K-\$300K in annual revenue, improving forecasting and reporting accuracy by 25%.
- Designed workflows to digitize inspection scheduling and compliance documentation for 25+ recurring clients monthly, reducing administrative errors and ensuring complete safety records.

PROJECTS

FBM - Mock E-Commerce Website | *Python, DjangoDB, JavaScript, Caching* Aug. 2024 – Dec. 2024

- Developed a mock E-Commerce website inspired by Amazon using Python and DjangoDB to manage backend operations, implementing optimized queries and automated caching that reduced average backend response times by an average of 45% while efficiently handling product and transaction data.

Minecraft Mod Creation | *Lua, Java, Forge (Client)* Jan. 2024 – Present

- Developed contributions to multiple Minecraft mods, including "EasyTransfer", a personal mod in development utilizing Java, and "CC: Tweaked" utilizing Lua.
- CC: Tweaked: Added new peripherals, custom APIs, and improved the Lua scripting environment.
- EasyTransfer: Developing an intuitive item, fluid and gas transfer system to simplify resource management.

Tuffle (Wordle Clone) | *C++, HTML/CSS* Nov. 2022 – Dec. 2022

- Developed Tuffle, a Wordle back-end clone in C++, applying algorithms and optimized data structures to handle word matching, game state, and player interactions.

LEADERSHIP & ACTIVITIES

Association for Computer Machinery, CSUF

Sep. 2022 – Present

Student Chapter Member

- Collaborated with like-minded peers, enhanced public speaking and presentation skills, and strengthened my ability to work in team settings.
- Competed in three ACM hackathons, applying skills in Object Oriented Programming, Algorithms, Software Development, and Data Management, earning runner up award for 'Best Game' in Spring 2023, and 'Most Technical' in Spring 2024.

TECHNICAL SKILLS

Languages: Python, SQL, Java, C++, JavaScript, Lua

Data Engineering & Analytics: Snowflake, Pandas, NumPy, FastAPI, Flask, ETL Pipelines, Data Modeling

DevOps & Cloud: Git, CI/CD, Microsoft Azure, Linux, PowerShell

Other Skills: Microsoft Excel, Problem Solving and Analytical Thinking, Communication, Adaptability
