

Yadav Nyoupane

Fort Worth, Texas • yadavnyoupane12@gmail.com • +1 (682) 416-1885

Summary

Data Analyst with 5+ years of experience in SQL, Python, and data visualization using Tableau, Power BI, and Excel. Skilled in data cleaning, transformation, and analysis to deliver actionable insights. Proficient in cloud platforms AWS (S3, Lambda) and data warehousing tools Snowflake and Redshift. Expertise in building interactive dashboards, automating reports, and optimizing workflows. Strong foundation in statistical analysis, data modeling, and time-series forecasting.

Military Service: Army Reserve (Security Clearance: [Secret])

Education

Master of Business Administration
The University of Findlay, Findlay, Ohio

Sep 2016 – Dec 2018

Bachelor of Business Administration
Kathmandu Model College, Kathmandu, Nepal

Jul 2009 – Jul 2013

Skills

- **Programming Languages:** SQL, Python, R, VBA
- **Visualization Tools:** Tableau, Power BI, Excel
- **Data Warehousing:** Snowflake, Redshift, BigQuery
- **Data Modeling:** Kimball, Star Schema
- **Machine Learning:** Scikit-learn, LightGBM
- **Cloud Platforms:** AWS (S3, Lambda, CloudWatch)
- **Analysis & Testing:** A/B Testing, Statistical Analysis

Experience

Northern Trust, USA

Jan 2022 - Current

Data Analyst

- Led client attrition analysis using SQL and Python (Pandas, Scikit-learn) to identify drivers of portfolio underperformance, resulting in a 20% reduction in attrition through targeted retention strategies for high-net-worth clients.
- Developed a real-time financial portfolio dashboard in Power BI (DAX measures, Power Query) to track asset allocation, liquidity metrics, and risk exposure, enabling a 15% improvement in investment decision-making efficiency for stakeholders.
- Conducted predictive analytics to forecast quarterly revenue trends and cash flow patterns, improving budget planning accuracy by 25% and reducing operational variances across departments.
- Automated regulatory compliance reporting using Excel VBA, saving 10+ hours weekly and ensuring adherence to SEC and FINRA audit standards through error-free documentation.
- Performed data quality audits on transactional datasets (e.g., trades, settlements), resolving discrepancies to improve accuracy by 30% for audit-ready financial reporting.
- Collaborated with cross-functional teams to analyze product adoption metrics via A/B testing (Python, SciPy), increasing cross-sell revenue by 10% through optimized campaign targeting.
- Built client segmentation models (K-means clustering) to categorize wealth management profiles by risk tolerance and investment behavior, driving an 18% rise in personalized service engagement.
- Created Tableau dashboards to visualize lifetime value (LTV) of client portfolios, enabling prioritization of high-margin relationships and improving retention efforts.

DXC Technology, USA

Mar 2019 – Jun 2021

Data Analyst

- Analyzed IT infrastructure performance trends across global data centers using Python (Pandas, NumPy) and SQL, improving system uptime insights by 25% and reducing downtime costs.
- Migrated legacy systems to AWS S3 and Snowflake, enhancing scalability for enterprise applications by 40% and cutting cloud storage costs by 20% through optimized resource allocation.
- Designed Tableau dashboards to monitor service delivery KPIs (e.g., SLA compliance, incident resolution rates), reducing stakeholder decision latency by 30% for critical IT operations.
- Cleaned and transformed log data from structured/unstructured sources (CSV, JSON) using Python (Pandas) and SQL, improving incident resolution workflows by 25% through streamlined data pipelines.
- Forecasted system resource demand (CPU, memory) using time-series models, optimizing infrastructure procurement and reducing shortages by 15% across 50+ servers.
- Optimized Snowflake queries for real-time analytics pipelines, improving query speeds by 30% and enabling faster insights for client-facing IT performance dashboards.
- Automated IT operational reports (e.g., server health, ticket volumes) using Power BI and VBA, saving 10+ hours weekly in manual effort and improving cross-team transparency.

Verisk Information Technologies, Nepal

Aug 2014 – Dec 2015

Data Analyst

- Built 15+ Tableau dashboards to track risk assessment metrics, actuarial trends, and claims severity patterns, enabling leadership to prioritize underwriting strategies for high-risk segments.
- Conducted policyholder cohort analysis using SQL (window functions, aggregations), refining risk segmentation for 12+ customer personas and improving pricing model accuracy.
- Automated claims processing reports with Tableau-calculated fields and Excel Power Pivot, reducing reporting delays by 50% and improving adjuster productivity through real-time data access.
- Analyzed call center data (Python, SQL) to optimize claims response workflows, cutting peak-hour wait times by 30% and enhancing customer satisfaction scores.
- Partnered with risk modeling teams to establish benchmarks for service expansion, supporting the rollout of 10+ new risk assessment frameworks across regional branches.
- Refined policy renewal strategies using Excel Power Pivot and advanced functions (VLOOKUP, INDEX-MATCH), increasing customer retention rates by 15% through targeted loyalty incentives.
