Data Analyst Engineer

PH: 913-295-7187

PROFESSIONAL SUMMARY

Results-oriented **Data Analyst and Data Engineer** with over **4+ years of experience** in building scalable data solutions, developing ETL workflows, and performing advanced analytics across cloud and on-prem environments. Skilled in **data modelling, predictive analytics, BI reporting, and data visualization** using tools like **Tableau, Power BI, and SSRS**. Experienced in leveraging **Python, SQL, and Big Query** for complex data analysis and automation.

Strong background in **Google Cloud Platform (GCP), AWS, and Azure** for designing and deploying high-performance data pipelines and analytics systems. Adept in **data warehousing, performance tuning, and database optimization** across relational and NoSQL databases including Oracle, SQL Server, and MongoDB.

Recognized for translating complex datasets into **actionable business insights**, improving decision-making processes, and collaborating cross-functionally in **Agile and fast-paced enterprise environments**.

TECHNICAL SKILLS

- Big Data Ecosystem: Hadoop, Map Reduce, Azure, HDFS, HBase, Zookeeper, Hive, Pig, Sqoop, Cassandra, Oozie, Flume and Talend.
- Databases: Microsoft Access, Oracle 11g, MySQL, DynamoDB, MongoDB
- ETL Tools: Informatica, Alteryx, Talend, DataStage, Pentaho
- Programming: Python, SQL, R, Scala, Java
- BI and Visualization: Tableau, Power BI, Cognos, QlikView, SSRS.
- Cloud: AWS, Microsoft Azure, Google Cloud (GCP).
- Microsoft Tools: SSIS, SSAS, SSRS, Excel, Visio.

PROFESSIONAL EXPERIENCE

BNY Mellon, Pittsburgh, PA.

Jan 2025 – Present

Data Analyst Engineer

Responsibilities:

- Designed and developed Tableau dashboards from scratch to generate actionable insights and solutions for client services. Unified dashboard showcased implementation stages, sales opportunities, customer usage trends, live customer counts, and persona breakdowns.
- Built and published customized interactive reports and dashboards with action filters, parameters, and calculated sets, leveraging Tableau Server for scheduling and seamless distribution.
- Created and managed databases and schema objects, including tables, indexes, and constraints, and developed stored procedures, user-defined functions, and triggers to support robust database operations.
- Designed, developed, and implemented BI solutions for Sales, Product, and Customer KPIs while optimizing database schemas for improved reporting throughput.
- Utilized Google Cloud Platform (GCP) services such as BigQuery for large-scale data analysis, Cloud Storage for raw data ingestion, and Dataflow for real-time ETL pipelines to transform and load data into analytical databases.
- Developed data pipelines using GCP BigQuery and Cloud Functions for fetching and processing employee data used in HR Predictive Modeling to identify trends in attrition and retention rates, visualized using Tableau dashboards.
- Build data pipelines in airflow in GCP for ETL related jobs using different airflow operators.
- Experience in GCP Dataproc, GCS, Cloud functions, Bigquery.
- Used cloud shell SDK in GCP to configure the services Data proc, Storage , BigQuery.
- Integrated GCP Cloud SQL and BigQuery with Tableau for interactive reporting and seamless visualization of data insights.
- Re-designed databases into de-normalized schemas to enhance data retrieval and throughput for reporting and visualization purposes.
- Worked in both Waterfall and Agile Methodologies to ensure timely delivery of high-quality solutions.
- Troubleshoot report processing, subscription, delivery, and configuration issues for dashboards and analytics platforms.
- Performed day-to-day database maintenance tasks, including monitoring, backups, and optimizing space and resource utilization on both traditional and cloud-based environments.
- Implemented predictive analytics in Tableau, using pre-processed data from GCP, Python to create insightful dashboards and stories.

- Created advanced SSRS reports using Report Designer and Report Builder, delivering parameterized and ad-hoc reports for critical business insights.
- Designed and documented workflows, creating linked diagrams between systems using Microsoft Visio and integrating with Excel for reporting needs.
- This integration showcases how GCP services were leveraged to enhance data processing, analysis, and reporting capabilities

Environment: Matplot, Oracle 11G, SQL Server Reporting Service, MS Access SQL, Python, BigQuery, cloud Storage, Data flow, Cloud Functions, ETL, Data Pipeline Data Modeling,, Tableau, Power BI, Microsoft Visio,

CVS PHARMACY, MN.

July 2024 – Dec 2024

Data Analyst Engineer

Responsibilities:

- Worked through all the phases of Software Development Life Cycle (SDLC) including Requirements Gathering, Analysis, Design, Development, Testing, Production and Post-production Support.
- Developed Stored Procedures and User Defined Functions for providing input feed for front end applications.
- Created complex Stored Procedures, Triggers, Functions, Indexes, Tables, Views, and joins.
- Designed and worked on Extraction, Transformation and Loading (ETL) process by pulling up large volume of data from various data sources using SSIS.
- Developed a 360-business dashboard in Tableau with multiple panels and parameters for Salesforce team.
- Map sources to targets using Excel Macro functions, SQL scripts, including BusinessObjects Data Services/BODI.
- Design and develop ETL processes. Establish coding standards, perform Peer review, and automate the health of the platform.
- Develop mapping / sessions / workflows.
- Developed complex SQL queries using stored procedures, common table expressions (CTEs), temporary table to support SSRS reports.
- Actively involved in developing Complex SSRS Reports involving Sub Reports, Matrix/Tabular Reports, Charts and Graphs.
- Worked on the data warehouse design and maintained different dimension and fact tables.
- Installed/configured SQL Server in Virtual Environments using VMWare.
- Reduced the timeline of individual migration projects by several months through optimization and documentation.

Environment: Microsoft Server Integration Services, MS Excel Macros, SSRS, VMware.

I Bing Software Solutions Private Limited Hyd India

Aug 2020 – June 2023

Data Analyst

Responsibilities:

- Participated in requirement gathering session with business users and sponsors to understand and document the business requirements.
- Created Power BI reports from scratch, getting requirements, data modelling and reporting.
- Worked on Power BI reports with new visualizations and adding more data sets into the reports.
- Designed Data Stage ETL jobs for extracting data from heterogeneous source systems, transform and finally load into the Data Marts.
- Involved in Managing Data modelling project from Logical design and implementation of Sybase Database
- Worked on Changing the visualization and look over of all the old reports so that all the Power BI reports look consistent throughout the company.
- Worked on DAX table functions including FILTER, ALL, VALUES, DISTINCT and RELATEDTABLE.
- Involved in developing reports and dashboards in Power BI.
- Worked on One Drive for storing different versions of Power BI report.
- Created different visualization (Stacked bar Chart, Clustered bar Chart, Scatter Chart, Pie Chart, Donut Chart, Line & Clustered Column Chart, Map, Slicer, Time Brush etc.) in Power BI according to the requirements.
- Worked on creating hyper link views on SharePoint site content table which would help user in the Power BI reports to get them to the web links that needed.
- Worked on automating the schedule refresh of Power BI reports using gateways.
- Used DAX (Data Analysis Expressions) functions for the creation of calculations and measures in the Power BI.
- Generated data source filters while handling a huge volume of data from Databases.
- Involved in developing parameterized, linked, matrix, drill down and aggregation reports with various parameters and filters using SSRS.

- Expert in creating Power pivots, Power Views and SSRS reports using Tabular Model (DAX), Cubes (MDX) and SQL queries.
- Used Power BI Data Gateway to keep the Dashboards and Reports up-to-date.
- Created Hierarchies and KPIs for better insight into the data and applied Z-order to the visualizations in the report.
- Worked on Conversion SQL Query code into DAX code for reports.
- Installed and Configured Enterprise Gateway and Personal Gateway in Power BI Services.
- Worked on tuning of the datasets (queries) which takes long time to refresh on Power BI web.
- Create the Calculated columns and measures with the use of DAX Expressions.
- Involved in effectively used data blending, filters, actions feature in Power BI.
- Created the Row Level Security in Power BI.
- Designed and developed T-SQL stored procedures to extract, aggregate, transform, and insert data.
- Worked with the Reporting Analyst and Reporting Development Team to understand Reporting requirements.
- Used forward engineering approach for designing and creating databases for OLAP model
- Used Teradata utilities such as Fast Export, MLOAD for handling various tasks
- Developed, and scheduled variety of reports like cross-tab, parameterized, drill through and sub reports with SSRS.
- Developed SQL scripts for loading data from staging area to confidential tables and worked on SQL and SAS script mapping.
- Identify & record defects with required information for issue to be reproduced by development team.
- Flexible to work late hours to coordinate with offshore team.

Environment: MS SQL Server, Visual Studios, Power BI, DAX, Agile, T-SQL, Microsoft Teams, GIT, MS Excel, Windows
