

RAJA SHEKAR

Cloud DevOps Engineer

Contact No: 475-265-2328

Email ID: rajashekarreddyyelati1998@gmail.com

PROFESSIONAL SUMMARY:

- 5 years of IT experience in all phases of Software Development Life Cycle (SDLC) such as Planning, Analysis, Design, Implementation, Testing and Maintenance of Web Based, Client - Server in all domains.
- Experience working with AWS Cloud platform and its features which includes lambda, ECS, EC2, S3, IAM, VPC, EBS, ELB, Auto-scaling, RDS, RDB, DynamoDB, RedShift, Route 53, Cloud watch, Elastic Beanstalk and Aurora. Deployed applications fronted by Route53 and configured health checks.
- Experience on technologies and platforms including JAVA, Node.js, Terraform, Jenkins, Git, Unix/Linux, windows server, VMWare, Docker, Ansible, Chef, Kubernetes, AWS, across Financial and Healthcare sectors.
- Implemented Terraform to provision and manage AWS and Azure resources, resulting in consistent and repeatable deployments.
- Proficient in installing and managing various services, including LDAP, NFS, DHCP, HTTP, FTP, SSH, and DNS.
- Expertise in improving build & deployment tools in DevOps through automation using scripting languages such as JavaScript, Power Shell, Bash, JSON, Ruby, Groovy and Python.
- Experience with system administration and troubleshooting operating system (Linux and/or Windows) and networking (HTTP/s, TCP/IP, DNS, OSI model, routing, switching, firewalls, LAN/WAN, traceroute, iperf, dig, CURL or related).
- Implemented security best practices in AWS including multi factor authentication, access key rotation, encryption. Using KMS, firewalls- security groups and NACLs, S3 bucket policies and ACLs, mitigating DDOS attacks etc.
- Extensive experience and knowledge of Configuration Management of CI/D tools like AWS Code Build, Code Commit, Code Deploy, Jenkins etc.
- Used Amazon Route53 to manage DNS zones globally & to give public DNS names to ELB's and Cloud Front for Content Delivery
- Design for high availability and business continuity using self-healing-based architectures, fail-over routing policies, multi-AZ deployment of EC2 instances, ELB health checks, Auto Scaling, and other disaster recovery models.
- Created CI/CD pipelines for .NET and python apps in Azure DevOps by integrating Bitbucket, SonarQube, and Nexus repository.
- Designed and implemented GitOps workflows using Argo CD to synchronize Kubernetes.
- Design, build and manage the ELK (Elasticsearch, Logstash, & Kibana) cluster for centralized logging and search functionalities for the App.
- Integrated ServiceNow with external tools and systems using REST APIs and web services.
- Created Ansible playbooks for automation purposes like file copy, permission changes, configuration changes, path specific folder creation, etc. Wrote playbooks for provisioning, orchestration, packages, services, configuration, and deployments.
- Experience in working with container-based deployments using Docker, Docker images, Docker file, Docker Hub, Docker Compose Docker registries and OpenShift.
- Experience with monitoring and logging tools like Dynatrace and Splunk, Datadog.
- Utilized monitoring tools like Prometheus, Grafana, or New Relic to closely monitor the behavior and performance of both Blue/Green environments.
- Actively participated in Agile, Kanban and Scrum methodologies, contributing to sprint planning, and stand-ups.

PROFESSIONAL EXPERIENCE:

Cigna Healthcare, Bloomfield, CT

Jan 2023- Till date

Role: Sr. AWS DevOps Engineer

Roles & Responsibilities:

- Developed Lambda scripts for automation using Python Boto3, including access key rotation, and tagging AWS resources.
- Made sure AWS Config Rules were set up to keep things compliant and secure.
- Worked closely with development teams to make sure applications ran efficiently and could scale well on AWS.
- Created and managed IAM policies and roles for controlled access to AWS services and resources.
- Wrote Terraform scripts for architectural changes at the root level of applications deployed on the AWS Cloud platform.
- Proficiently utilized AWS Secret Manager to securely manage and store sensitive credentials and API keys.
- Implemented HTTPS ingress on AWS using Application Load Balancer (ALB) to serve as a reverse proxy.

- Implemented a high-performance application load balancer for efficient traffic distribution.
- Utilized Docker and Ansible playbooks for continuous deployment and Infrastructure as Code (IaC).
- Created Jenkins CI/CD Pipeline to schedule turn off/on of non-production environments across multiple AWS Accounts.
- Integrated Apache Tomcat with GitLab CI/CD pipelines to enable automated and seamless deployment of applications after successful builds.
- Implemented ETL pipelines using AWS Glue to extract, transform, and load data from various sources into AWS data lakes and data warehouses.
- Integrated Trivy into CI/CD pipelines to ensure that container images are scanned for security issues automatically during the development process.
- Setting up Jenkins Credentials with AWS Secrets Manager for storing Application configuration data all App Settings changes.
- Managed major Kubernetes project, setting up production environments with two EKS clusters in different availability zones.
- Provided streamlined command-line access to the EKS cluster using Docker, kubectl, and AWS CLI on a Linux subsystem.
- Utilized Data Dog to gain insights into auto-scaling behaviors and resource utilization patterns.
- Created alarms in CloudWatch to monitor sudden cost increases of AWS resources and analyzed billing reports.
- Successfully optimized costs across AWS accounts using services like Trusted Advisor, Cost Explorer, and Cloud Check.

Environment: IAM, CloudWatch, CloudFormation, AWS Secret Manager, AWS Code Pipeline, Elastic Container Registry (ECR), Elastic Kubernetes Service (EKS), Terraform, Ansible, Docker, Jenkins, GitLab, GitHub, GIT, SonarQube, Nexus Repository Manager, Trivy, Apache Tomcat, ELK Stack, Prometheus, Grafana, Datadog, ServiceNow, JIRA.

Careator Technologies Pvt Ltd, India

Nov 2019 - Jul 2021

Role: AWS DevOps Engineer

Roles & Responsibilities:

- Established complete CI/CD pipelines to ensure that each developer commit goes through a standardized software lifecycle process and thorough testing before reaching production.
- Developed serverless REST APIs on AWS Lambda, leveraging languages such as Node.js, Python, or Java.
- Created AWS Virtual Private Cloud (VPC), public and private subnets, NACLs, route tables, Elastic Load Balancer, security groups, and EC2 instances using terraform modules.
- Migrated new projects to Jenkins and assisted developers in refactoring Maven Pom.xml to use Artifactory.
- Extensive experience in enhancing security best practice for Networking, Access Control and Encryption of resources.
- Created and configured GitHub Actions workflows to automate application builds for Java, .NET, and Progress applications, enabling seamless continuous integration across multiple technology stacks.
- Integrated GIT with Jenkins pipelines to trigger automatic builds and deployments upon code changes.
- Created Ansible inventory for continuous deployment and wrote playbooks using YAML scripting.
- Managed Ansible playbooks and roles, deploying web applications on Apache, and automating server configuration and management.
- Utilized Maven as a build tool for Java projects, publishing artifacts into the Nexus repository, and integrating with Git for project management and deployments.
- Configured EKS to manage the Kubernetes management infrastructure, implemented different scheduling options. and enforced security on EKS.
- Implemented and maintained Chef Configuration management across VMware and AWS cloud environments.
- Managed WebSphere software upgrades and patches, ensuring that the environment was up to date with the latest fixes and security updates.
- Solution, migrate and support SQL and NoSQL databases/caches in the cloud, including MongoDB, PostgreSQL, Redis, MySQL, Amazon RDS, AWS DynamoDB, and Amazon Aurora.
- Responsible for day-to-day builds and deployments in pre-production and production environments.
- Implemented Continuous Integration and Continuous Delivery using Jenkins, Puppet, and Shell Scripts.
- Integrated SonarQube for code coverage and Selenium for automated tests.
- Utilized Docker and container orchestration tools like Kubernetes to streamline application deployment.
- Implemented and maintained monitoring and alerting of production and corporate servers using AWS CloudWatch.

Environment: Jenkins, Maven, Artifactory, GIT, Docker, Azure, Puppet, CloudWatch, Chef, VMware, AWS, SonarQube, Selenium, WebSphere, Dynatrace, Nexus, JFrog, Kubernetes, Nagios XI, Prometheus, Grafana, Splunk, New Relic, Bash, Shell Scripting, JIRA.

Role: DevOps Engineer**Roles & Responsibilities:**

- Managed continuous delivery, deployment, and monitoring processes in Azure DevOps.
- Developed ARM templates with nested templates and shared templates to facilitate the deployment of all Azure infrastructure.
- Worked on various Azure services, including Compute, App Services, Blobs, Resource Groups, Azure Data Lake, Azure Data Factory, Azure SQL, and ARM Services.
- Implemented Serverless Cloud Services using Azure Functions with application insights.
- Led the migration of on-premises resources to Azure Cloud using Azure Site Recovery.
- Implemented Azure Active Directory for seamless single sign-on access to cloud SaaS applications.
- Automated Azure IAAS VMs using Terraform modules and set up Kubernetes clusters with automation via Ansible playbooks.
- Utilized GIT repository for version control of Terraform files and integrated cloud formation during Terraform deployments.
- Automated the provisioning of hybrid solutions, connecting Azure to on-prem resources through Infrastructure as Code, Azure Express Route, and Azure Hybrid Connections.
- Integrated Nginx with Jenkins CI/CD pipelines to automate the deployment of web applications and configurations.
- Integrated SonarQube to the CI/CD pipeline for sonar scans, improving code quality.
- Developed and maintained a centralized artifact repository using tools like Nexus, and JFrog.
- Deployed microservice applications on Azure Kubernetes using Azure Kubernetes Service (AKS) and Kubernetes Cluster for cluster management.
- Implemented Nginx load balancing to distribute incoming traffic across multiple backend servers, ensuring high availability and scalability of web applications.
- Worked with Azure Monitoring tools, including Azure Network Watcher, and Azure Service Health, to diagnose issues and minimize service degradation.
- Used Jira for defect/issues logging & tracking and documented all work using Confluence.

Environment: Azure DevOps, Azure Services, ARM templates, Azure SQL, Azure Active Directory, Cosmos DB, Terraform, Ansible, Jenkins, GIT, Bitbucket, Python, Docker, SonarQube, Azure Databricks, Azure Kubernetes Service (AKS), Azure Container Registry (ACR), Azure Key Vault, Azure Pipelines, Nginx, Prometheus & Grafana, Jira, Confluence.

TECHNICAL SKILLS:

Cloud Platforms	AWS, Azure
Configuration Management Tools	Terraform, ARM templates, Cloud Formation, Ansible.
CI /CD Tools	Jenkins, Azure DevOps Pipelines, AWS Code Pipeline, GitLab CI/CD, GitHub Actions.
Build Tools & Repository Manager	Maven, Gradle, JFrog, Nexus.
Containerization Tools	Docker, Docker Swarm, Kubernetes, AWS ECS.
Version Control & Bug Tracking Tools	GIT, GitHub, GitLab, Bitbucket, SVN, Jira, Remedy.
Logging & Monitoring Tools	CloudWatch, Azure Monitor, Prometheus, Grafana, Splunk, ELK Stack, Data Dog.
Scripting & Programming Languages	Shell Scripting, PowerShell, YAML, Python, Groovy, .Net, Node.js, java.
Databases	My SQL, Azure SQL, PostgreSQL, MongoDB, DynamoDB.
Application/Web Servers	Web logic, Web sphere, Apache Tomcat, Nginx, .
Operating Systems	UNIX, Linux, Windows, CentOS, UBUNTU and RHEL.

EDUCATION:

- Masters in Information Technology from Wilmington University.
