

RAM THAKORE

Full Stack Engineer | Java & Node.js | AWS | Distributed & Scalable Systems

Dallas, TX | +1 (469) 227-0670 | ramdthakore2000@gmail.com | [LinkedIn](#)

SUMMARY

Full Stack Engineer with 2+ years building high-scale Node.js, React, and AWS platforms that process tens of thousands of requests per minute under sub-100ms latency. Specialized in distributed microservices, event-driven pipelines, and SQL/NoSQL performance tuning with measurable 3–5× improvements. Skilled in delivering fault-tolerant, cost-efficient systems using Kafka, Redis, and automated CI/CD pipelines.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, SQL, Bash

Frontend: React, Next.js, Redux Toolkit, React Query, Tailwind, Material UI, Atomic Design, Jest, RTL

Backend: Node.js, Express.js, FastAPI, Spring Boot, REST, GraphQL, Django, OAuth2, JWT, Kafka, Web Sockets (Socket.io)

Databases: PostgreSQL, MySQL, MongoDB, Redis (caching, rate-limiting), DynamoDB

Cloud & DevOps: AWS (EC2, S3, Lambda, API Gateway, RDS, DynamoDB), Docker, Docker Compose, Kubernetes, GitHub Actions, GitLab CI, Jenkins

System Design: Microservices, API design, load balancing, horizontal scaling, caching strategies, event-driven systems

Tools: npm/yarn/pnpm, Postman, Swagger/OpenAPI, Git, Vite, Webpack, TurboRepo

EXPERIENCE

Full Stack Engineer | UnitedHealth Group, USA

Sep 2024 – Present

- Built and optimized Node.js microservices using Express and Redis caching, reducing average response time from 480ms to 95ms and sustaining 45,000+ requests per minute during peak loads.
- Architected event-driven workflows leveraging Kafka for messaging, AWS Lambda for compute, and Amazon S3 for storage, automating claims data processing and reducing operational overhead by 75%.
- Rebuilt UI flows using React, Redux Toolkit, and React Query, cutting frontend latency by 45% and increasing Lighthouse performance scores to 95+.
- Implemented secure authentication with OAuth2 and JWT, preventing unauthorized access and aligning with internal compliance and audit requirements.
- Deployed Dockerized services on AWS ECS and Kubernetes, enabling horizontal auto-scaling and achieving 99.9% uptime across mission-critical applications.
- Created end-to-end CI/CD pipelines using GitHub Actions, Docker, and automated test suites, reducing deployment time from 12 minutes to under 2 minutes with full vulnerability scanning.
- Tuned PostgreSQL performance through indexing, table partitioning, and connection-pool optimization, improving heavy-query execution times by 50–60%.

Software Engineer | Nevina InfoTech, India

Jun 2021 – Jul 2022

- Developed high-traffic REST and GraphQL APIs using Node.js and FastAPI, supporting ERP workflows for 30,000+ active users under strict performance SLAs.
- Designed Java- and Node.js-based microservices for orders, billing, and inventory using Kafka event flows, boosting system throughput by 4.2× and eliminating cross-service bottlenecks.
- Engineered performant frontends with React, Next.js, and Material UI using modular component architecture and server-side rendering, reducing bundle size by 32% and improving page load time by 45% across key user flows.
- Engineered a high-performance data access layer using PostgreSQL and MySQL query batching, prepared statements, and Redis caching, reducing P99 latency from 900ms to 180ms and boosting throughput by 3.5×.
- Automated CI/CD pipelines with Jenkins, GitHub Actions, and Docker caching layers, cutting regression defects by 50% and enabling daily, zero-downtime deployments.
- Implemented enterprise-grade API hardening using rotating JWTs, HMAC request validation, IP throttling, and Redis-driven rate limiting, stabilizing the system during 35,000+ requests per minute traffic spikes.

PROJECTS

Real-Time Collaboration Platform — Node.js | WebSockets | Redis | React | AWS

- Built a horizontally scalable real-time engine using Node.js, Socket.io, Redis Pub/Sub, and sharded channels, supporting 15,000+ concurrent sessions and 65,000 events/min with 70ms P95 latency under sustained load.
- Deployed the distributed collaboration stack on AWS ECS Fargate with ALB and CloudWatch automation, enabling auto-scaling, zero-downtime releases, and achieving 99.97% uptime across real-time features.

Distributed UDP Processing Service — Java | Multithreading | Datagram Socket | Redis | Kafka

- Built a multithreaded Java UDP ingestion service handling 50,000+ packets per minute with P95 latency under 20ms, achieving a 3.2× throughput boost over the single-thread design.
- Integrated Redis for fast device-state caching and rate limiting, reducing redundant lookups by 65% and stabilizing performance during burst-heavy traffic.

EDUCATION

Master of Science in Information Technology, University of Texas at Dallas, USA

Aug 2022 - May 2024

Bachelor of Technology in Information Technology, Dharmsinh Desai University, India

Jul 2018 - May 2022
