

Gopi Dodda

Ph: +1 331-425-3248

Email: gopid2025@gmail.com

PROFESSIONAL SUMMARY

- **5+ Years of IT Experience in Data Analytics and Cloud Solutions:** Extensive expertise in implementing Big Data solutions, ETL pipelines, and data integration strategies across industries such as Supply Chain and Insurance. Skilled in leveraging cloud-native services, data orchestration tools, and analytics platforms to drive business insights.
- **Expert in Azure Cloud and Big Data Technologies:** Specialized in Azure Data Factory, Azure Databricks, Spark Streaming, Delta Lake, Logic Apps, and Azure Log Analytics for designing and implementing scalable, high-performance data pipelines. Proficient in Medallion Architecture and Delta Live Tables to streamline data integration. Strong background in using Power BI for dynamic reporting and data visualization.
- **Advanced Programming and Scripting Skills:** Proficient in SQL, PL/SQL, Python, PySpark, Scala, and Hive QL for data processing and transformation. Expertise in scripting with Shell and Python, and utilizing regular expressions for data validation and manipulation.
- **Spark and Data Processing Expertise:** Experienced with Spark components including RDDs, Spark SQL (Data Frames and Datasets), and Spark Streaming for both real-time and batch data processing. Skilled in designing optimized data pipelines to handle large datasets efficiently.
- **Cloud Infrastructure and Automation:** Hands-on experience with Azure cloud services, including Azure Logic Apps and Azure Key Vault for workflow automation and secure management of secrets and credentials. Built and managed data pipelines for seamless data flow and integration in cloud environments.
- **Database Management and Migration:** Experienced in working with various relational and NoSQL databases such as Oracle, Azure SQL, MySQL, SQL Server, HBase, MongoDB, and Azure Synapse DB. Skilled in migrating databases to Azure platforms and managing large-scale datasets in distributed systems.
- **CI/CD and Version Control:** Proficient in using Git, Azure DevOps, and implementing CI/CD pipelines for automated testing and deployment of cloud-based applications, ensuring continuous integration and delivery for efficient development cycles.
- **Monitoring and Logging:** Implemented and configured Azure Log Analytics to monitor, troubleshoot, and optimize cloud-based solutions. Provided actionable insights into system performance and security using real-time logging and metrics.
- **Data Orchestration and Workflow Management:** Designed and deployed Databricks Workflows to automate complex data processing and machine learning tasks, ensuring smooth orchestration of tasks across multiple cloud services for scalable and efficient data operations.

EDUCATION

Lewis University, IL – MS in Business Analytics

(Jan 2025 – Aug 2026)

JNTU Kakinada, India – BS in Aerospace Engineering

(Jul 2012 – Apr 2016)

TECHNICAL SKILLS

- **Big Data Technologies:** Azure Data Factory, Azure Databricks, Kafka, Apache Spark, Spark Streaming, HDFS, Hive, Power BI, SSIS (SQL Server Integration Services)
- **Programming Languages:** SQL, PL/SQL, Python, PySpark, Scala, Hive QL, Shell, Python Scripting, Regular Expressions
- **Spark Components:** RDD, Spark SQL (Data Frames and Dataset), Spark Streaming
- **Cloud Infrastructure:** Azure, Azure Logic Apps, Azure Key Vault
- **Databases:** Oracle, MySQL, SQL Server, NoSQL Database (HBase, MongoDB), Azure Synapse DB
- **Version Control:** GIT, Azure DevOps, CI/CD pipelines
- **Monitoring & Logging:** Azure Log Analytics
- **Data Orchestration & Automation:** Databricks Workflows

WORK EXPERIENCE

Accenture: MARS — Senior Data Engineer

Oct 2022 – Dec 2024

- Designed and implemented Azure Data Factory (ADF) pipelines, leveraging Linked Services, Datasets, and activities to automate and optimize ETL processes for data extraction, transformation, and loading from diverse source systems. Configured both full and incremental data loads to ensure efficient data integration.
- Proficiently profiled structured, unstructured, and semi-structured data, instituting data quality metrics and implementing necessary queries or Python scripts as per the data source.

- Configured and managed Azure DevOps Repos for Azure Data Factory and Databricks, ensuring efficient version control and implementing the Git flow branching strategy for streamlined collaboration.
- Designed and implemented an Azure Data Factory pipeline to invoke SSIS packages stored in Azure SQL Database, automating data extraction, transformation, and loading (ETL) processes for efficient cloud-based data integration.
- Created and scheduled Databricks jobs to process Delta Tables within a Medallion Architecture, automating data transformations and ensuring seamless data flow across bronze, silver, and gold layers for enhanced analytics readiness and scalability.
- Designed and deployed a real-time data processing pipeline by integrating Delta Live Tables with Kafka, enabling seamless ingestion, transformation, and storage of streaming data while maintaining schema enforcement and reliability.
- Developed and deployed SSIS packages to perform ETL operations and integrated them with Azure Data Factory (ADF) using the SSIS runtime, enabling seamless execution and scheduling of workflows for efficient data processing and transformation.
- Optimized PySpark jobs by tuning configurations and harnessing cluster computing, substantially boosting data processing speed for near real-time insights.
- Automated data refresh processes in Power BI using PowerShell scripting.
- Provided mentorship to junior engineers, imparting expertise in CI/CD pipelines and cloud-native architectures.
- Prepared a comprehensive technical solution document to serve as a reference guide for future endeavors.
- Offered substantial assistance throughout the production rollout and provided ongoing support during the post-deployment period, including warranty support.
- Orchestrated Databricks data preparation and loading into SQL Data Warehouse using Azure Data Factory. Led data ingestion from Data Lake to Data Warehouse, leveraging Azure services.
- Engineered Spark applications for data validation, cleansing, transformation, and custom aggregation. Employed Spark engine and Spark SQL for data analysis, aiding data scientists' subsequent analyses.
- Configured Azure Log Analytics to monitor Azure Data Factory instances and set up automated failure notifications, enabling real-time alerts and proactive issue resolution across multiple data factory pipelines.
- Proficient in DAX for creating complex calculations in Power BI and optimizing Power BI reports for improved performance and responsiveness.

Infosys: AXA — Data Engineer

Jan 2020 – Oct 2022

- Collected business and technical requirements from stakeholders to guarantee a comprehensive understanding of the project's demands.
- Utilized APIs for extracting data from insurance systems, external databases, and fraud detection tools.
- Developed comprehensive ETL pipelines using Azure Data Factory (ADF) and Databricks to seamlessly integrate and process a variety of data sources.
- Established a mechanism for alerting on pipeline failures by implementing a Logic App in the workflow. This ensures timely notification and intervention in case of pipeline issues.
- Utilized Azure Key Vault for secure storage of secrets, enhancing overall security measures.
- Implemented a Git repository to manage version control for the project, ensuring effective tracking and collaboration throughout the development process.
- Undertook the responsibility of monitoring ADF pipeline executions, re-executing pipelines in the event of failures, and conducting cleanup activities as part of the troubleshooting process.
- Engaged in troubleshooting ADF (Azure Data Factory) pipelines, promptly identifying and resolving failures to ensure seamless data flow and pipeline functionality.
- Created configuration files and regularly maintained them to align with the day-to-day execution of pipelines, ensuring accurate and up-to-date settings.
- Following issue resolution, I contributed to the knowledge base by documenting detailed articles. These documents serve as a valuable resource for future reference, aiding in the efficient resolution of similar issues.
- Employed stored procedure activities to interact with database tables, crafting stored procedures to handle the ingestion, updating, and deletion of records within SQL tables.
- Facilitated client access at a specific folder level by implementing differentiated permission levels through Active Directory (AD) groups.

CERTIFICATIONS

- Microsoft Certified: DP - 900 Azure Data Fundamentals
- Microsoft Certified: DP - 203 Azure Data Engineer Associate
- Hacker Rank Certified: Microsoft SQL (Advanced)
- Databricks Certified Data Engineer Associate
- Databricks Certified Data Engineer Professional
- Microsoft Certified: Power BI Data Analyst Associate
