EDUCATION

Master of Science in Computer Software Engineering

Dec 2025

Northeastern University, Boston, MA

GPA 3.9

Coursework: Object Oriented Design, Design Patterns , Data structures and Algorithms, Web Design and UI/UX, Data Management and Database Design, Network structures and Cloud Computing, Agentic AI

TECHNICAL SKILLS

Languages	Java, C#, Python, SQL, JavaScript, TypeScript
Frontend	ReactJS, Redux, AngularJS, HTML5, CSS3, SASS, Kendo UI, Material UI, Figma
Backend	Node.js, Express.js, Django, REST APIs, .Net Core, MVC, Spring boot
Databases	Oracle Database, MS SQL Server, MySQL, PostgreSQL, Mongo DB, Redis
Cloud & DevOps	AWS, Azure, Azure DevOps, GitHub Actions, Terraform, Docker, Kubernetes, Jenkins, CI/CD, Dynatrace
Tools and Platforms	GitHub, Git, Postman, Swagger, MS Test, Cypress, PowerShell, Linux/Unix, VS Code, GitHub Copilot
Certifications	Microsoft Certified Azure Fundamentals - AZ900, Power platform fundamentals - PL900

WORK EXPERIENCE

Software Development Engineer | XR Extreme Reach, Boston, USA

Jan 2025 - May 2025

- Engineered and deployed scalable **.NET** and **Angular** features for a high-volume order entry system, collaborating with product owners and architects to reduce overall page loading time by 40% and improve user experience
- Developed and optimized **C#** RESTful **APIs** to expose new backend functionality, reducing API execution time by 15%
- Optimized backend performance by 30% by refactoring legacy **LINQ** code to leverage ServiceStacks **OrmLite**, resulting in more efficient data transactions with **MS SQL Server**
- Increased **MS unit test** code coverage by 36% and automated end to end UI testing with **Cypress**, utilizing mocking and stubbing to improve reliability and reduce regressions

DevOps Engineer | Accenture, Bengaluru, India

Dec 2021 - Jul 2023

- Spearheaded transformation initiatives, implementing **Azure Logic Apps** to automate daily monitoring and alert systems for critical infrastructure components, catalysing a 30% decrease in monitoring incidents reported
- Automated manual database refreshes using **Azure DevOps** pipelines to replicate production data for UAT and support teams, reducing downtime for issue resolution and saving 2 hours of manual work per refresh
- Streamlined **post-deployment** validation protocols and refined incident resolution workflows, ensuring smooth feature rollouts and reducing critical **production incidents** by 40%
- Led team of 3, conducting competitive **root cause analysis** for application performance using **Dynatrace** and Azure logs, leading to targeted code optimizations and 35% improved application performance
- Mentored** new developers by conducting over 50 **code reviews**, created comprehensive onboarding resources on confluence and provided hands-on training that accelerated new developer productivity

Associate Software Engineer | Accenture, Bengaluru, India

Nov 2020 - Dec 2021

- Refactored** legacy code into reusable components and implemented **NgRx** for predictable state management, significantly improving application responsiveness and reducing UI latency by 18%
- Authored deployment plans and orchestrated **production rollouts**, coordinating UAT execution and business alignment, minimizing post deployment issues by achieving 100% compliance with scheduled timelines
- Configured** and **tested** packaged software updates, supporting 2 weekly release cycles with zero downtime

KEY PROJECTS

Customer Support System [Agentic AI, Python, LLM, NLP, LangChain] [Link](#)

Aug 2025

- Architected a hybrid multi-agent customer support chatbot in **Python**, integrating **RAG** search and LLM-based intent classification to provide scalable and efficient automation
- Designed an Agentic AI system with **LangChain** and **Pydantic** for robust error handling and efficient task execution

AWS Cloud-Native Web App [AWS, NodeJS, MySQL, Terraform, Packer, CI/CD] [Link](#)

Dec 2024

- Developed a secure back-end NodeJS user registration system with token-based authentication, enabling users to perform CRUD operations, utilizing Terraform to automate **AWS** infrastructure(**S3, RDS, EC2, KMS, CloudWatch, ACM, Route53, Lambda**)
- Deployed on an autoscaling **ALB**-facing **EC2** instance using custom **AMI** built with packer. Utilized lambda serverless function for email verification and **CI/CD** pipelines using GitHub Actions to automate image builds, template validation, integration tests and deployments

GlobeMediWatch [React, Express JS, MongoDB, NodeJS, RESTApi] [Link](#)

Apr 2024

- Engineered a full stack application with a robust backend system and enhanced functionality of **CRUD** operations, boosting data processing speed by 40% with **MongoDB**
- Implemented key features, including **JWT** Authentication, **Mailgun** for notifications and **Stripe** for payments
