

ABHAY SINGH

Email: abhaysgh2@gmail.com

Contact: +15016211054

PROFFESIONAL SUMMARY:

- Around **8 years** of **full-stack development** experience in all aspects of the **Software Development Life Cycle (SDLC)**, including **analysis, design, development, implementation, and testing of electronic systems**, as well as **business applications using OOPs, JAVA/J2EE expansions, and a strong exploratory ability**.
- Have a good experience in utilizing **Agile** procedures like **Scrum, Sprint with Waterfall, Test-Driven Development (TDD)** traditional and imaginative programming models for **Agile Software Development** by using **JIRA** Software.
- Expertise in UI design and development using web technologies such as **SASS, HTML5, CSS3, jQuery, Bootstrap, JavaScript, AJAX**.
- Have a clear knowledge and proficiency in creating web applications using various JavaScript frameworks **React JS, Angular JS, Node JS**.
- Have good experience in building reusable **UI** components by using **JavaScript** library **React JS** and worked with **Redux and Flux** architectures.
- Extensive experience in building single page applications (**SPA**) using **Angular** with expertise in creating User Controls, Web Forms and client-side **validations** using **JavaScript, jQuery and Angular**.
- Experience working with **Node.js** to setup **Web API's** using **JavaScript**.
- Proficient in producing and consuming **RESTful** web services using **Rest API** and **NodeJS**.
- Extensive experience using Java technologies: **Core Java, JDBC, Java Message Service, JSP, Servlets, JPA, EJB, Swing, Applets, and JSTL**. Expert in Core Java features **OOPs, Multithreading, Concurrency, Robust features (Exception Handling, File handling, Garbage Collections), IO, Generics and Java collections**.
- Good Utilized experience in Java 8 features like **Lambda expressions, default, static methods in Interfaces, Optional class and Parallel sort in Arrays and Stream API for Bulk data operations on Collections**.
- Strong experience in Spring Framework modules such as **Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Boot, Spring REST, Spring Boot Actuator, Spring Batch, Spring Cloud, Spring Security, Spring Microservices**.
- Proficient in applying **JMS (Java Messaging Service)** for reliable information exchange across Java applications using **Apache Kafka, RabbitMQ, IBM MQ** to communicate from Client to Server.
- Developed projects with **SOAP (JAX-WS, WSDL) RESTful services (JAX-RS, Spring SOAP (JAX-WS, WSDL) RESTful BOOT)** and automated the documentation using **Swagger** and **WADL** for format describing and designing complex REST APIs respectively.
- Skillful in unit-testing with tools like **JUnit and Mockito**.
- Experienced in Middleware persistence frameworks like **Hibernate/JPA** entities for mapping 'Java classes' using **Hibernate Query Language (HQL), HSQL Named Queries, Criteria, Projections**. Developed **DAO** objects and implemented **data access layer** using **JPA-Hibernate** to perform **CRUD** operations.
- Strong Experience in working with relational Databases and non-relational databases like **MYSQL, Oracle DB, SQL-Server, DB2, Microsoft SQL Server, Postgres SQL and NoSQL, MongoDB, Cassandra**. Have good experience in writing stored procedures, functions and triggers using **PL/SQL** in **JDBC, ODBC** and in **WebLogic** server.
- Experienced in using **Amazon Web Services (AWS)** and **Cloud Computing**. Extensive experience focusing on services like **EC2, S3, Elastic Search**.
- Extensive experience on deploying compute and storage in **Azure** cloud.
- Hands-on expertise in testing, deploying, and maintaining applications on web servers such as **IBM Web Sphere, JBoss** and **Apache Tomcat Server**.
- Hands on experience in Implementing **Docker** container service, build pipeline like **Jenkins** for Continuous Integration and Continuous Deployment that can run on the cloud or on-premises.

- Experienced in developing applications using **Visual Studio, Eclipse** (4.x/3.x (Neon, Oxygen, Kepler, Luna, Indigo, Juno)), **Atom, Sublime text editor and IntelliJ**. Have good experience in build tools like **ANT, Maven, Gradle** and logging tools like **Log4J**.

TECHNICAL SKILLS:

Programming Languages	Java 1.8, C, SQL,PL/SQL, Python, Scala
Software Methodologies	Agile, Scrum, TDD, SDLC
J2EETechnologies& frameworks	JSP (2.x), JSTL, Servlets 3.1, EJB, JDBC, Java Beans XSD, JAX-RS, JAX-WS, SOAP, WSDL, Axis, Java Security, JBPM
Web Technologies	HTML, DHTML, AJAX, Bootstrap, JavaScript, jQuery, XML, XSLT, XSL, CSS, JSON, Node Js, AngularJS, Angular 6, React JS
Frameworks	Spring 4.3, Hibernate 4.3, Angular JS 1.0/1.5/2.0, Spring Security 3.2, Spring MVC, Spring Boot, Spring Data, Spring Cloud, Spring AOP, Servlets, Java Swing, Applets, Spark
Web Services	SOAP, RESTful, Oracle SOA, UDDI, WSDL
Design Patterns	Singleton, Data Transfer Object, Data Access Object, MVC.
IDEs	Eclipse, NetBeans 8.0.2, IntelliJ IDEA 2017.1, Spring Tool Suite 3.8.3,ATOM.
Application/Web Servers	Web Logic Server 12c, Apache Tomcat (8.5/8.0), Apache HTTP Server, IBM HTTP Server (8.5)
Relational Databases	Oracle 9i/10g/11g/12c, SQL Server 2012/2014/2016,MySQL, Postgres SQL.
NoSQL Databases	MongoDB, Cassandra, Couch DB.
Build Tools	Maven3.3.9,
Testing Tools	JUnit, Mockito, Log4J
Version and Source Control	GIT, Bit Bucket, CVS, SVN, Rational Rose, GITHUB 2.12.0
Operating Systems	Windows, Unix, Linux, Mac OS
Cloud Technologies	AWS, EC2, Pivotal Cloud Foundry (PCF), Docker, JIRA, Azure
O-R Mapping	Hibernate, JPA
Messaging	JMS MQ, IBM MQ, Rabbit MQ, IBM MQ 8.0

EXPERIENCE:

Client :- CapitalOne

NOV 2023 - PRESENT

Role :- Software Developer

Location :- Wilmington, Delaware

Responsibilities:

- Worked on **Agile Methodology** with bi weekly sprint, and daily scrum meetings with backlogs and story points.
- Developed and configured **Kafka consumers** in **Spring Boot** applications for real-time data streaming and processing.
- Implemented message-driven microservices with **Kafka**, ensuring reliable communication.
- Designed and integrated Apache **Avro schemas** with Kafka topics to ensure efficient serialization and schema evolution in a distributed environment.
- Executed Kafka topic migrations from old to new Avro schemas, ensuring backward and forward compatibility for uninterrupted data flow.
- Designed and implemented schema evolution strategies with Kafka Streams to transform and reprocess data during

topic migrations.

- Updated **Python application** logic to align with new schema requirements, ensuring accurate data consumption and processing from Kafka topics.
- Built a Python-based bypass mechanism to manually handle failed producer data and ensure smooth recovery for downstream processing.
- Integrated **RDS Aurora MySQL** to store validated data after Kafka consumer processing, ensuring reliable and scalable database management.
- Identified and **remediated vulnerabilities** in Java applications by applying security patches and updating dependencies to mitigate risks.
- Utilized **Secure Guardian** to identify, assess, and remediate vulnerabilities in Java applications, ensuring compliance with security standards and best practices.
- Utilized **Checkmarx** to analyze and improve **code quality** by identifying security vulnerabilities and ensuring adherence to best coding practices.
- Developed **Jenkins pipelines** to streamline the build and deployment process for applications in the QA environment, ensuring faster and reliable testing cycles.
- Created and maintained **automated test cases** in Java using **Cucumber** to validate application functionality based on user stories.
- Developed reusable step definitions and test **scenarios in Cucumber** to ensure efficient and consistent automated testing for Java applications.
- Wrote **JUnit** test cases leveraging **Mockito** to mock dependencies, ensuring isolated and reliable testing of Java components.
- Implemented comprehensive JUnit tests with Mockito to validate service-layer logic and improve overall code quality and coverage.
- Utilized **Splunk** to retrieve and analyze application logs, enabling efficient debugging and resolution of issues in real-time.
- Used AWS **CloudWatch** to access and analyze logs for identifying and resolving application issues in cloud-based environments.

Environment: Java, J2EE, Spring-boot, JPA, Cucumber, Junit, AWS, CloudWatch, Splunk, Python, Kafka, Avro-Schema, Secure Guardian, Jenkins, Checkmarx. RDS AuroraMySQL.

Client :- Michaels

MARCH 2022 - NOV2023

Role :- Lead Full-Stack Developer

Location :- Dallas, Texas

Responsibilities:

- Worked on **Agile Methodology** with bi-weekly sprints, and daily scrum meetings with backlogs and story points.
- Used CSS Preprocessors like **CASS**. And implemented **ReactRouter**.
- Using react performed complicated athematic calculation to fulfill the business requirement.
- To enable communication between **React** applications and backend services using **Axios** call.
- Used **React Hooks** like **useState**, **useEffect**, **useRef**, etc. to update the states in react to stop re-rendering the components again and again when it loads.
- Worked with core **java API's**, **Exceptions**, and **Interfaces** to develop java applications.
- Also worked on **Java8** and upgraded to **Java17**.
- Worked with **Core Spring** Features like **Spring MVC**, **Spring DAO**, **Spring Boot**, and **Spring Batch**.
- Used **Spring** Framework's IOC Dependency Injection to inject Service Object using Service Locator Design Pattern into Action Classes.
- Implemented **Spring Boot Micro Services** to divide the application into various sub modules. Used micro-services architecture with Spring based services to integrate user libraries in the application.
- Connected to Data sources and performed operations using Spring Data Framework features like **Spring JPA**.
- Developed **REST Web services** to make web service calls simple and easy for the client to access it with the help of standard HTTP URIs. Developed **micro services** using **Spring Boot** exposed as REST API and integrated with Angular JS based web applications.

- Developed reusable and interoperable Web service modules based on service-oriented architecture (SOA) by using RESTful services. Created GET/PUT request and response using RESTFUL web services.
- Using **Spring Boot** created cron job which is responsible for generating flat files on SFTP serve.
- Handled response data from **RESTFUL** webservices using JSON to update UI Interacted with java controllers.
- We also created **APIs** using **Node.js** with **Express.js**.
- Implemented **Microservices architecture** using **Spring Boot** for making the application smaller and independent.
- Developed stored procedures and triggers using **PSQL** to calculate and update the tables to implement business logic using **PostgreSQL database**.
- Interacted with backend **PostgreSQL** and wrote **Stored Procedures, Functions** and **Cursors** for deleting and inserting using **PSQL**.
- Worked on **PostgreSQL** as the backend database and integrated with spring to retrieve Data Access Objects.
- Performed CRUD operations using **Spring data JPA** and wrote custom queries as well.
- Here we have **cron** job written in **NodeJS** which take the data from the **PostgreSQL** and transfer to **SQL Server** on the manufacturing side for starting manufacturing process.
- Created Python script for capturing the faulty order data which transmitted to the **SQL server** from **PostgreSQL** through **cron job** and perform calculation and provided the correct data which is required to manufacturing frame.
- Wrote the **PSQL script** to capture the data for the other faulty orders which is in one of the following columns as a **jsonb** format.
- Deployed and build the UI application using the pipeline which connect to the **Heroku** to **Bit bucket**.
- Here I collaborated with **offshore team** in **Chain** to guide them through the new integration.
- The other collaboration with the **offshore team** I did with is India's **TCS** team as a newly hired professional I have to guide them through the project as well as need to help the with the new integrations.
- As a lead in I must create and assign the tickets which we receive from the business and need to update my manager regarding the team's update.
- Also need to collaborate with business and get the information about the upcoming deliverables/requirements and assign to the respected team member which includes **offshore** Teams as well.

Environment: Java, J2EE, Spring, JPA, Hibernate, JMS, Tomcat JavaScript, React, React Hooks, Spring Framework, Spring MVC, Spring boot, JSON, IntelliJ, PostgreSQL, HTML, CSS, Microservices, GIT, SQL Server, Couchbase, Maven, Python.

Client :- Givelify

OCT 2020 – FEB 2022

Role :- Full-Stack Developer

Location :- Dallas, Texas

Responsibilities:

- Worked on **Agile Methodology** with bi-weekly sprints, and daily scrum meetings with backlogs and story points.
- Used CSS Preprocessors like **SASS** and **LESS**. And implemented **React Router** to enable navigation from one view to the next as user performs application tasks.
- Implemented client-side endorsements using **React (ReactForms)** to perform formvalidations in both client-side and server-side.
- Implemented **React** Controllers to maintain each view data.
- To enable communication between view components and server and to handle **RESTful** calls, used **React Ajax** module.
- Skilled in leading frameworks as **Node.js** to build high-quality, scalable, and reusable components and Front-end solution.
- Worked with core **java 8 API's, Collections Threading, Exceptions, and Interfaces** to develop java applications.
- Worked with **Core Spring** Features like **Spring MVC, Spring DAO, Spring Boot, and Spring Batch**.
- Designed and developed micro services business components using **Spring Boot**.
- Used **Spring** Framework's IOC Dependency Injection to inject Service Object using Service Locator Design Pattern into Action Classes.

- Used the **Spring IOC** feature to get Hibernate session factory and resolve other bean dependencies also used Spring framework AOP features and **JDBC** module to persist the data to the database for this application.
- Connected to Data sources and performed operations using Spring Data Framework features like **Spring JDBC** and **Spring ORM**.
- Developed **REST Web services** to make web service calls simple and easy for the client to access it with the help of standard HTTP URIs.
- Handled response data from **RESTFUL** webservices using XML and JSON to update UI Interacted with java controllers.
- Used **Spring Integration** for integrating the application with Microservices.
- Developed stored procedures and triggers using **PL/SQL** to calculate and update the tables to implement business logic using **Oracle database**.
- Interacted with backend **Oracle** and wrote **Stored Procedures, Functions** and **Cursors** for deleting and inserting using **PL/SQL**.
- Performed CRUD operations using **Spring data Oracle-DB repositories**.
- Used **Junit, Mockito** and **Power Mock** for writing unit test cases creating mock objects.
- Experience in using **AWS services** such as provisioning **EC2, VPC, Security Groups, S3, SNS**.
- Develop **AWS Lambda** based Microservices interacting with **SNS/SQS** using **AWS SDK** and to trigger the events related to migration of data.
- Developed and deployed restful web APIs in **AWS instances** with **Jenkins, Open shift, and Docker** technology.

Environment: Java, J2EE, Spring, JDBC, Hibernate, JMS, Tomcat in AWS EC2 instances, Docker, OpenShift, WebLogic, JavaScript, React, JSP, Hibernate, Spring Framework, Spring MVC, Spring boot, JSON, Eclipse, Oracle, HTML5, Jenkins, CSS3, Microservices, GIT, SQL Server, Couchbase, Junit, Maven, ANT, JMeter, Mockito, Power Mock.

Client :- Magellan Health

AUG 2019 – SEPT 2020

Role :- Full-Stack Developer

Location :- Dallas, Texas

Responsibilities:

- Involved in analysis, design, and implementation phases of **SDLC** using **Agile** methodology.
- Developed user interface modules using **HTML5, CSS3, JavaScript**, and **jQuery**.
- Designed dynamic and browser-compatible pages using **HTML5, CSS3, Bootstrap, JavaScript**, and **React JS**.
- Built user interfaces using **React.js/Redux**, leveraging state **store, middleware, action creator, reducer, and container**.
- Implemented client-side interfaces using **ReactJS** and **Redux** for single-page application development.
- Developed responsive websites using **React JS** for desktop, tablets, and mobile users.
- Implemented **virtual DOM** using **React JS** for client-side view rendering.
- Utilized design patterns such as **Singleton, Factory, DAO, DTO, prototype**, and **Composite View**.
- Implemented **Lambda expressions, Streams**, and **Predicates** for enhanced functionality in the service layer.
- Integrated business modules using **Spring framework** and **Hibernate** data mapping.
- Leveraged **Hibernate Template, HQL**, and named queries for data access.
- Utilized **Hibernate** framework for **object-relational** mapping and database operations.
- Developed **RESTful** web services using **JAX-RS API** and provided **XML** and **JSON** output.
- Implemented **Microservice architecture** using **Spring Boot, Spring Cloud**, and **Apache Kafka**.
- Integrated **Microservices** using **Apache Camel**.
- Configured and deployed **Microsoft Azure** for various applications, focusing on high availability and fault tolerance.
- Designed and developed **Cloud Service** projects for deployment to **Web Apps, PaaS**, and **IaaS**.
- Troubleshot performance and configuration issues with **MySQL** and **Oracle databases**.
- Utilized **Docker** for achieving continuous delivery in a scalable environment.
- Conducted unit testing, integration testing, and production testing using **JUnit**.
- Used **Maven** for application building and development.
- Employed **Jira** for project management and **GitLab** for issue and bug-tracking.

Environment: Java, Core Java, Spring boot, JSON, React JS, Spring Actuator, Spring Security, Azure, JUnit, RESTful Components, REST API, Hibernate, JMeter, Agile, JavaScript, React, Webservices, HTML, CSS, Oracle, Maven,

Bootstrap, Kafka, GIT, JMS, log4j, Nodejs, RESTful, Jira , GitLab .

Client :- Virtusa Consulting Services

JUNE 2018 – JULY 2019

Role :- Full-Stack Developer

Location :- Chennai, India

Responsibilities:

- Implemented **Agile** methodology and created technical design documents.
- Developed user interface webpages using **HTML5, CSS3, React, and Bootstrap**.
- Utilized **Spring RESTful API** to create **RESTful** Web Services.
- Built reusable components and implemented **React.js** with **Redux** for **front-end UI**.
- Worked with **React Native** app development and testing.
- Worked with **MERN (MongoDB, Express.js, React.js, Node.js)** full stack programming.
- Integrated **XML** and **JSON** interfaces using **REST API**.
- Generated documentation for **REST calls** using **Swagger API**.
- Managed project dependencies and configurations using **pom.xml**.
- Implemented exception handling in **SOAP** and developed **front-end** using **JavaScript, servlets, JSP, and AJAX**.
- Worked on **Mongo DB** for locking, transactions, indexes, replication, and schema design.
- Utilized **Git, JIRA, and Agile** methodology for source control, project management, and software development.
- Used **Eclipse** and **IntelliJ IDE** for application building.
- Improved application performance using **Java 8** features like **Lambda expressions** and **stream API**.
- Configured **Git repositories** with branching and tagging for source code control.
- Configured **Jenkins** with **Docker** for continuous integration.
- Implemented unit test cases using **JUnit, Log4j, Easy Mock, and Mockito**.
- Worked with **Amazon Web Service (AWS) EC2** and **Jenkins** for continuous integration.

Environment: HTML5, CSS3, Angular, React, Redux, Bootstrap, Spring RESTful API, Swagger, node.js, spring boot, angular, SCRUM, MERN, XML, JSON, dependencies, plugins, pom.xml, SOAP, JavaScript, servlets, JSP, AJAX, Mongo db., Git branching, JIRA, Eclipse, IntelliJ IDE, Jenkins, Docker, JUnit, Log4j, Mockito.

Client :- ITC Infotech India Pvt. Ltd.

JULY 2016 – MAY 2018

Role :- Full-Stack Developer

Location :- Bangalore, India

Responsibilities:

- Planned, analyzed, designed, and implemented modules using **Agile (Scrum)** Methodology.
- Participated in Daily **Scrum** meetings, Sprint planning, estimation, retrospective, and sprint demos.
- Worked on optimizing an existing **React** project.
- Developed Single Page Applications using **React** framework and Webpack module loader.
- Demonstrated proficiency in **JavaScript, jQuery** Framework, and **CSS**.
- Developed the presentation layer using **JSP** and client-side validations with **JavaScript**.
- Utilized Core **Java8** for multithreading, concurrency, file handling, generics, data structures, and collections.
- Implemented Java multithreading for cascading changes on multiple records in a transaction.
- Utilized Spring and Struts frameworks for JSP-based web applications.
- Configured and implemented **Spring IoC** container and dependency injection.
- Utilized **Spring MVC** framework for better control over presentation and business aspects.
- Used **Hibernate ORM** for data storage, retrieval, and mapping.
- Developed database procedures using **PL/SQL** for logical unit of work (LUW) operations.
- Implemented asynchronous multi-thread processing using **Java Message Service, Message Driven Beans, PL/SQL, and Triggers**.
- Deployed applications in **Apache Tomcat** server and used **log4J** for logging.
- Experience in running web scale services on **AWS**.
- Responsible for bug fixes, code integration, and version control using **CVS**.
- Conducted **JUnit** testing for components.

Environment: Core Java, J2EE, JSP/Servlet, JDBC, HTML, CSS, JavaScript, JQuery, Ajax, React, Spring, Hibernate 3.0, Web services, AWS, MVC design patterns, UML, XML, Apache Tomcat, JMS, JNDI, Maven, Java beans, RMI, Junit, Toad with Oracle, CVS, My Eclipse IDE, UNIX.

Client :- HSBC

AUG 2014 – JUNE 2016

Role :- Full-Stack Developer

Location :- Agra, India

Responsibilities:

- Implemented OO Design Concepts, Exception Handling, and addressed Memory, Performance, and Transactional issues.
- Developed reports using J-Report Designer, utilizing Core **Java, J2EE, JSP, JSTL, Servlets, and XML**.
- Created mock-ups of different report types in the specified format using Dreamweaver.
- Utilized PDF Renderer Tool to generate PDF-formatted customer invoices.
- Modified the Web Application's UI design based on report parameters.
- Designed and implemented MVC architecture using the Struts Framework.
- Developed Action Classes and Handlers to route requests to JSP.
- Utilized **JSP, JavaScript, HTML5, and CSS3** for manipulating and validating user interfaces.
- Conducted Unit Testing, Sanity Testing, and Integration testing for the reports.
- Implemented data persistency using Hibernate and Spring Framework.
- Utilized **CVS** for version control and collaboration with other team developers.
- Assisted with bug fixing, functional testing, production support, and maintenance using **JIRA**.
- Contributed to writing software specifications based on requirements and functional design.

Environment: JDK, JSP, Servlets, JDBC, EJB, JMS, Spring, Hibernate, AJAX, Oracle 9i, XML, HTML4, CSS, Eclipse, PL/SQL, Junit.
