PROFESSIONAL SUMMARY

Data Analyst with 3+ years of experience transforming complex datasets into actionable insights for improved operational efficiency and customer engagement. Expertise in data collection, cleaning, validation, and advanced SQL querying for data extraction and manipulation. Proficient in developing interactive dashboards and reports using Tableau and Power BI, along with conducting exploratory data analysis using Python (Pandas, NumPy) and R. Skilled in optimizing data processes and delivering data-driven solutions to enhance decision-making across diverse project initiatives.

TECHNICAL SKILLS

Spreadsheet Tools: Excel, Excel Pivot Tables, Excel Formulas, VLOOKUP, INDEX/MATCH, Conditional Formatting
Databases & Querying: SQL, MySQL, PostgreSQL, SQL Server, MS Access, SQL DDL, SQL DML, SQL Stored Procedures, SQL Joins, SQL Subqueries, SQL Query Optimization, CTEs, Window Functions
Programming & Libraries: Python, R, VBA, Pandas, NumPy, Matplotlib, Seaborn
Business Intelligence & Reporting: Tableau, Power BI, Looker, Excel Charts

WORK EXPERIENCE

Cirkul, Inc, Data Analyst Oct 2024 to Present

- Analyzed customer purchase patterns and subscription data using SQL to identify key trends in beverage flavor preferences, directly supporting new product development efforts and decision-making.
- Developed interactive dashboards using Tableau, visualizing key sales performance and customer retention metrics to provide actionable insights for business stakeholders.
- Cleaned and preprocessed large datasets from multiple sources using Python with Pandas, maintaining data quality for robust analytical reports and models.
- Generated weekly and monthly reports focusing on marketing campaign effectiveness, extracting necessary data from the CRM system using SQL to inform strategic adjustments.
- Built data models in Looker to support A/B testing analysis for new product features and website optimizations, contributing to an improved user experience.
- Performed ad-hoc data investigations using SQL and Python to answer specific business questions about customer behavior and product usage patterns.
- Visualized complex data insights with Matplotlib and Seaborn in Python, presenting findings on customer engagement trends to product development teams.
- Monitored key performance indicators for e-commerce operations, reporting on subscription growth and order fulfillment data using Power BI for operational oversight.
- Assisted in designing data collection strategies for new product launches, ensuring relevant customer feedback was gathered for subsequent analysis with SQL.
- Generated predictive insights on potential customer churn using Python statistical libraries, helping refine customer retention strategies for the personalized hydration platform.

Auxiant, Data Analyst Jun 2022 to Nov 2023

- Managed diverse data loads, including EDI files and eligibility feeds, ensuring accurate intake into the adjudication system through complex SQL queries for data integrity.
- Performed critical data extractions for PPO and PBM eligibility, delivering essential information for client benefit plans and compliance using advanced SQL queries.
- Developed custom operational and client-facing reports, providing actionable insights into claim processing and eligibility data using Excel and VBA scripts.
- Analyzed large datasets to identify trends and anomalies in claim adjudication, improving data quality and system performance through in-depth SQL analysis.
- Collected, cleaned, and validated structured and unstructured insurance claim datasets using Python with Pandas to ensure data quality for subsequent analytical processes.
- Designed and developed interactive dashboards using Tableau and Power BI to visualize key performance indicators for insurance operations and risk assessment.
- Performed exploratory data analysis on claims data to identify patterns and statistical trends, supporting actuarial insights and informing critical risk management strategies.
- Built foundational data models and performance metrics to track claim processing efficiency and identify areas for operational improvement within the insurance platform.
- Supported senior data analysts by generating precise data extracts and preliminary analysis, contributing to comprehensive reports for key stakeholders in insurance operations.
- Documented data collection and transformation processes, maintaining robust data integrity standards within relational databases like SQL Server for auditability and compliance.

EDUCATION

Master of Science in Information Technology December 2025
Webster University, Missouri GPA:3.8

CERTIFICATIONS

Microsoft Technology Associate – Introduction to Programming Using Python
Database Foundations - Introduction to Database
AWS Certified Cloud Practitioner (CLF-C02)
ChatGPT prompt Engineering Certificate
Databricks Accredited Generative AI Fundamentals – Databricks Academy (Feb 2026)
AI in Project Management - (Feb 2026)
