SUMMARY

Machine Learning & Data Science enthusiast with hands-on experience in AI and data science, gained through internships with leading research and technology organizations. Demonstrated expertise in developing tools to enhance operational efficiency. Equipped with a strong foundation in machine learning models and optimization techniques, with a focus on contributing to advanced ML solutions.

SKILLS

Languages: Python, C/C++, SQL

Tools: Git, Google Cloud, Tableau

Machine Learning & Data Analysis: Pandas, NumPy, TensorFlow, PyTorch, Scikit-learn, Seaborn, Matplotlib, LangChain, LLM

Certifications: Neural Networks and Deep Learning by Andrew Ng; Microsoft Learn AI Skills Challenge issued by Microsoft; VLSI Design for Artificial Intelligence & Machine Learning issued by Global Academy of Technology

WORK EXPERIENCE

Artificial Intelligence Engineer (Python, Git, LLM)

March 2024 - April 2024

Radical AI

Remote, USA

- Developed a **chat bot** offering coaching and mentorship using **OpenAI**, **VertexAI**, and TensorFlow, incorporating principles of data modeling, algorithms, and deep learning

Data Science Trainee (Python, PyTorch, TensorFlow, Linux)

January 2022 - May 2022

Sravathi AI

Bangalore, India

- Designed and deployed a platform using **Graph Neural Networks (GNNs)** to train and generate molecules from SMILES input, applying knowledge in machine learning and data structures.
- Devised **metric scoring** for 16 different models and evaluated NCE project, demonstrating an accuracy of **73%**, showcasing expertise in statistics, probability, and deep learning evaluation techniques

Solution Consultant (C#, C++, Excel Macros)

February 2021 - August 2021

Hewlett Packard Enterprise

Chennai, India (Remote)

- Developed a tool that automated data entry and verification in SAP for the Order Processing team
- Coordinated with automation team to develop a .NET Framework-based order booking framework using SAP database, boosting workflow efficiency by 30%

EDUCATION

Master of Science in Electrical Engineering (Machine Learning & Data Science)

May 2024

University of Southern California, Los Angeles

GPA: 3.71/4

Key Courses: Probability, Linear Algebra, Machine Learning (Supervised & Semi-Supervised), Deep Learning, Computing Principles using C++, Statistics

Bachelor of Engineering in Electronics and Communications

May 2021

RV College of Engineering, India

GPA: 8.48/10

Key Courses: Data Structures, Algorithms, Signal Processing

PROJECTS

FAQ Generator (Python, Tensorflow, Beautiful Soup) [\[GitHub\]](#)

March 2024 - May 2024

- Fine-tuned **QLoRA PEFT Llama-3 8b**, **Llama-2 7b**, **Mistral 7b**, **T5**, and **BART** to generate FAQs
- Scrapped MS in CS admission requirements from the top 150 US universities, storing the data in a JSON file
- Improved the accuracy and relevance of generated FAQs by **10%** compared to a baseline T5 transformer model.

Gemini Quizify (Python, Pytorch, LangChain, GCP) [\[GitHub\]](#)

March 2024 - April 2024

- RAG** based project provided by Radical AI to develop ReX, a quiz bot using **Google Gemini**
- Generated a quiz algorithm by using **VertexAI** embeddings and Chroma DB for data pipeline with Streamlit UI for **data ingestion**
- Improved quiz generation quality by prompt engineering, increasing the success rate to **80%**

American Sign Language Recognition using CNN (Python, Pytorch, NumPy) [\[GitHub\]](#)

March 2023 - April 2023

- Implemented custom CNN models from scratch, integrating transfer learning to discern superior model by assessing F-1 scores
- Achieved **100%** accuracy on familiar dataset and **71%** accuracy rate on unfamiliar dataset characterized by abstract features

Enhancing Interpretability in Mushroom Classification (Python, Numpy, Seaborn) [\[GitHub\]](#)

March 2023 - April 2023

- Conducted comprehensive analysis and feature engineering on UCI mushroom dataset using **UFS**, **RFE** and **PCA**
- Compared supervised models, achieving **99%** accuracy with SVM, demonstrating strong data analysis and modeling skills.

Machine Learning over Encrypted Medical Data (Python, Numpy, Pytorch)

September 2020 - December 2020

- Designed a framework using dummy Client-Server-Receiver Model for medical data analysis without user awareness of data contents
- Accomplished Homomorphic Encryption and Diffie-Hellman-Merkel Key Exchange, achieving maximum data security and privacy with an error rate of **3.71e-11**
