

Rupesh Suragani

Data Analyst

Location: Ohio, USA | Mail: rupeshsuragani2140@gmail.com | Ph.: +1 (216)395-7424 | [LinkedIn](#)

PROFESSIONAL SUMMARY:

- 5+ years of experience as a Data Analyst with a comprehensive background spanning financial services, e-commerce and insurance, adept at leveraging advanced analytics, machine learning and robust data engineering to solve complex business challenges, optimize operations and ensure regulatory adherence.
- Proficient in optimizing ETL/ELT pipelines using tools like Alteryx, Apache NiFi, Talend, SSIS, Airflow & PySpark, ensuring seamless data flow and integrity across Oracle, SQL Server, Google BigQuery & Azure Synapse Analytics.
- Expert in applying statistical modeling and machine learning techniques, including XGBoost, Random Forest, Isolation Forest, ARIMA, GARCH, Prophet, K-Means clustering, hierarchical clustering and logistic regression, for credit risk assessment, fraud detection, time series forecasting and comprehensive customer segmentation (RFM, cohort analysis).
- Skilled in developing dynamic dashboards and automated reporting solutions using Tableau, Microsoft Power BI, Google Data Studio and Excel Power Pivot, translating complex data into actionable insights for executive decision-making and regulatory reporting (Basel III, CCAR, DFAST, SOX 404, FATCA, AML-BSA, SEC, Federal Reserve, IRDAI).
- Leverages strong programming skills in SQL, Python (Pandas, NumPy, Scikit-learn, SciPy, MLlib), R (forecast, tidyverse) and VBA to conduct in-depth data analysis, root cause analysis and implement data validation rules.
- Experienced with CRM and web analytics platforms such as Salesforce, Zoho CRM, HubSpot, Google Analytics, Adobe Analytics & GA4, driving insights for campaign performance, user journey optimization & conversion rate enhancement.
- Committed to driving efficiency, enhancing model accuracy and empowering data-driven strategies that directly impact business performance and regulatory compliance.

TECHNICAL SKILLS:

Programming Languages:

Python (Pandas, NumPy, SciPy, Scikit-learn, Statsmodels, Matplotlib, Seaborn), R (tidyverse, forecast, caret, ggplot2), SQL (T-SQL, PL/SQL, MySQL, PostgreSQL)

Data Manipulation & ETL Tools:

Alteryx, Talend, Apache NiFi, SSIS, PySpark, ODBC, Oracle Data Integrator

Databases & Warehousing:

Oracle, SQL Server, Azure Synapse Analytics, Google BigQuery, Snowflake

Data Visualization & Reporting:

Tableau, Microsoft Power BI, Google Data Studio, Excel (Power Pivot, VBA Macros), Jupyter Notebook

Machine Learning & Modeling:

XGBoost, Random Forest, Isolation Forest, Logistic Regression, Decision Trees, ARIMA, GARCH, Prophet, K-Means, Hierarchical Clustering, Monte Carlo Simulation

Big Data & Streaming:

PySpark (MLlib), Apache Kafka, Hadoop Ecosystem

Cloud & DevOps Platforms:

Azure Synapse Analytics, Google Cloud Platform (BigQuery), AWS (EC2, S3), Apache Airflow (for orchestration)

Web & Digital Analytics:

Google Analytics 4 (GA4), Adobe Analytics, Heatmaps, Shopify, Magento, WooCommerce

CRM, ERP & E-commerce:

Salesforce, Zoho CRM, HubSpot, ERP Systems (Custom & Off-the-Shelf), Product Information Management (PIM) Systems

Regulatory & Risk Compliance:

Basel III, CCAR, DFAST, SOX 404, AML-BSA, FATCA, IRDAI

Statistical & Risk Analysis:

A/B Testing, RFM Segmentation, Scenario-based Stress Testing, Forecasting, Anomaly Detection, Risk Segmentation, Credit Scoring Models, KPI Analysis, Scenario Planning

Workflow Automation & Scheduling:

Apache Airflow, SSIS, VBA Macros, Job Scheduler Tools

Version Control & Agile Tools:

Git, GitHub, Jira, Confluence

Model Evaluation Metrics:

AUC-ROC, Precision, Recall, F1 Score, Lift, RMSE, MAE

Project Methodologies:

Agile (Scrum), Waterfall, Sprint Planning, Backlog Grooming, Daily Stand-ups.

PROFESSIONAL EXPERIENCE:

Data Analyst | JPMorganChase – OH

August 2024 – Present

- Conducted root cause analysis on data inconsistencies in Basel III regulatory datasets, implementing data validation rules and exception handling logic in SAS Enterprise Guide and SQL for audit readiness.
- Collaborated with internal audit and compliance teams to ensure all models and data pipelines met governance and regulatory standards including SOX 404, FATCA and AML-BSA obligations.
- Improved data pipeline efficiency by 42% by optimizing complex SQL queries, indexing strategies and ETL workflows across Oracle and SQL Server environments, enhancing system performance for daily batch processing.
- Automated financial reporting workflows in Excel using Power Pivot, VBA macros and ODBC connections to deliver daily P&L summaries, variance alerts and exception reports to trading desks and controllers.
- Automated CCAR and DFAST stress testing report generation using SSIS, Apache Airflow and Azure Synapse Analytics, ensuring accurate regulatory filings in alignment with SEC and Federal Reserve reporting standards.

- Performed Monte Carlo simulations and scenario-based stress testing on consumer and commercial loan portfolios using R (forecast, tidyverse) to evaluate capital adequacy and ensure compliance with Basel III risk frameworks.
- Enhanced credit risk model accuracy by 23% through implementing XGBoost classifiers, leveraging segmentation features such as Loan-to-Value (LTV), Debt-to-Income (DTI) ratio & FICO credit scores for improved underwriting decision-making.
- Reduced fraudulent transaction rate by 17.6% by developing and deploying ensemble machine learning models (Random Forest and Isolation Forest) to detect anomalies and suspicious patterns across high-risk accounts.
- Developed scalable fraud detection pipelines in PySpark using MLlib and Kafka streaming, integrating Anti-Money Laundering (AML) and Know Your Customer (KYC) data to support real-time transaction monitoring.
- Built advanced time series forecasting models (ARIMA, GARCH, Prophet) to project revenue, interest income and loan loss reserves, enabling proactive liquidity and balance sheet management.
- Designed interactive Tableau dashboards for senior executives and risk committees to visualize key risk indicators (KRIs), asset quality metrics, delinquency trends and macroeconomic stress test scenarios.

Data Analyst | Accenture – India

August 2021 - August 2023

- Engineered robust ETL/ELT pipelines using tools like Alteryx, Apache NiFi and Talend to integrate disparate data sources, including clickstream data (Google Analytics, Adobe Analytics), Product Information Management (PIM) systems and supply chain databases, ensuring seamless data flow and accuracy.
- Developed and optimized complex SQL queries on cloud-based platforms like Google BigQuery to extract, transform and analyze high-volume transactional data from e-commerce platforms (Shopify, Magento, WooCommerce) and ERP systems, ensuring scalability and performance.
- Integrated and harmonized CRM data from platforms like Salesforce, Zoho CRM and HubSpot to analyze campaign performance, customer engagement metrics and sales attribution, providing actionable insights for cross-functional teams.
- Conducted in-depth cohort analysis, RFM (Recency, Frequency, Monetary) segmentation and A/B testing using Python libraries (Pandas, NumPy, SciPy) to identify high-value customer segments and optimize promotional strategies for Indian e-commerce platforms.
- Leveraged Google Analytics 4 (GA4), Adobe Analytics and heatmaps to analyze user journey funnels, reduce cart abandonment rates & optimize conversion rates across desktop and mobile channels for Indian e-commerce marketplaces.
- Implemented advanced machine learning algorithms, including K-Means clustering, hierarchical clustering and propensity modeling, to segment customers based on purchasing patterns, browsing behavior and demographic data, driving hyper-targeted marketing campaigns.
- Built and deployed predictive models for customer churn, lifetime value (CLTV) and demand forecasting using machine learning techniques (logistic regression, random forests, XGBoost) in Python and R, enhancing retention strategies and inventory planning.
- Designed and deployed advanced, interactive dashboards using Microsoft Power BI and Google Data Studio to visualize critical KPIs such as sales trends, inventory turnover, customer acquisition costs and basket size metrics, enabling data-driven decision-making for Indian retail and e-commerce stakeholders.
- Drove a 20% increase in Gross Merchandise Value (GMV) by leveraging customer segmentation, personalized product recommendations and dynamic pricing strategies tailored to Indian market dynamics.

Data Analyst | HCLTech – India

June 2019 - July 2021

- Partnered with cross-functional teams—claims assessors, field investigators and underwriting—to identify critical data points, validate business rules and ensure data integrity in the fraud analytics ecosystem.
- Utilized Python (Pandas, NumPy, Scikit-learn) and SQL for large-scale claims data extraction, cleansing and analysis; executed pattern recognition & anomaly detection to flag suspect claims for motor, health and life insurance portfolios.
- Conducted in-depth exploratory data analysis (EDA) to detect latent fraud indicators, correlations, outliers and segment-wise risk factors across multiple insurance product lines.
- Enhanced fraud detection accuracy by 20% through the engineering and integration of advanced features sourced from policyholder transactional behavior, policy data & historical claim activity, tailored to meet IRDAI compliance standards.
- Designed and implemented statistical models and machine learning pipelines within insurance-specific platforms to assess claim legitimacy, supporting fraud mitigation strategies according to Indian regulatory and business requirements.
- Designed, developed and deployed supervised machine learning models (including Random Forest, XGBoost and Decision Trees) to proactively detect and predict fraudulent insurance claims, resulting in a measurable 15% decrease in fraudulent payouts within the initial quarter.
- Automated end-to-end fraud scoring workflows by developing interactive Power BI dashboards, reducing manual review time by 30% and enabling real-time monitoring of key fraud risk indicators for business stakeholders.
- Assessed and reported model performance using insurance-relevant metrics, such as precision, recall, F1-score, AUC-ROC and lift, to inform leadership and optimize model retraining cycles.
- Performed comprehensive root cause analysis on detected fraudulent claims to uncover patterns, process loopholes and recommend actionable process improvements that align with organizational loss prevention goals.
- Actively contributed to Agile project management workflows, including sprint planning, backlog grooming and daily stand-ups, ensuring rapid delivery of data-driven solutions to business and risk management teams.

EDUCATION:

Masters of Business Analytics - Kent State University at Kent, OH, USA

Bachelor of Commerce - Osmania University, Telangana, India
