

SUMMARY

Data Analyst with over 4+ years of experience in leveraging Azure and Aws other advanced data technologies to derive actionable insights and optimize business processes. Proven track record in healthcare and technology sectors, with a strong focus on clinical trial data management and real-time analytics. Skilled in ETL processes, data visualization using Power BI and Tableau, Airflow, and data integration with Azure Data Factory. Proficient in Python, SQL, and Java for automation and analysis. Excellent communicator and team player, adept at managing multiple assignments and collaborating effectively across diverse teams. Detail-oriented, adaptable, and committed to continuous learning and professional growth in dynamic environments.

EXPERIENCE:

Techrakers IT Solutions | Data Engineer

Feb 2024 – Dec 2024

- Created and optimized **over 20 data pipelines, ensuring the timely and accurate flow of data from various sources to Azure Synapse Analytics, resulting in a 30% improvement in data processing efficiency.**
- Worked closely with business and technical teams to identify, integrate, and distribute data across the organization, leading to a 25% reduction in data integration time by streamlining the process.
- Contributed to project squads by adhering to project management best practices and actively participating in scrum ceremonies, which improved project delivery timelines by 15%.
- **Gained an understanding of data usage patterns to design and implement efficient data models in Azure Synapse, ensuring compliance with industry regulations** and reducing query time by 20%.
- Leveraged Databricks, Azure, and AWS services to manage, store, and process data, enhancing system performance and scalability by 35% while maintaining strict adherence to data protection standards.
- Utilized **Databricks Workflows and Apache Airflow** to orchestrate and monitor data pipelines, ensuring seamless integration and data quality, code review, resulting in a 40% increase in pipeline reliability.
- Developed automated testing frameworks **using SQL, Python, and Alteryx**, improving test coverage by 35% and reducing audit validation time by 40%.
- Stayed current with industry **trends, emerging technologies, and regulatory changes**, contributing to the successful adoption of new data engineering best practices in compliance with AML requirements.

CraftAny IT Solutions | Data Analyst

Jan 2023 - Dec 2023

- Utilized advanced analytical techniques to interpret complex data sets and provide actionable insights for decision-making.
- Developed and maintained **ETL processes to ensure data integrity and consistency. Collaborated with cross-functional teams** to define project scope and identify KPIs.
- Conducted data mining, cleansing, and validation for accuracy and completeness. Leveraged **Azure services like Data Factory, SQL Database, and Synapse Analytics for data storage and analysis.**
- Designed and implemented **Power BI visualizations** to effectively communicate insights. Generated ad-hoc reports and dashboards to monitor business performance and track KPIs.
- Conducted exploratory data analysis to **identify trends and anomalies. Translated business requirements into technical solutions** and recommended process improvements based on data analysis.
- Applied project management frameworks to oversee multiple data projects, **ensuring timely completion and stakeholder satisfaction.** Used **Microsoft Office Suite and SharePoint** for documentation and collaboration across business levels.
- Supported multiple assignments and **stakeholders, prioritizing workload to meet deadlines.**

Cyrrup Solutions Private Ltd | Data Analyst

June 2021 - May 2022

- Spearheaded the **development of a critical ETL pipeline**, reducing data processing time by **30% optimization techniques, resulting in improved efficiency** and faster insights delivery to stakeholders.
- Collaborated with a cross-functional team to design and implement data quality checks, resulting in a **20% decrease in data errors and ensuring higher accuracy and reliability of analytics** reports.
- Managed migrating legacy data storage systems to a modern cloud-based solution, resulting in a **40% reduction in storage costs and enhanced scalability to accommodate future data growth.**
- **Enhanced data visualization capabilities by integrating Tableau dashboards** with real-time data feeds, resulting in a **50% increase in user engagement** and actionable insights for business decision-makers.
- Led a project to automate manual data extraction processes using Python scripts, **reducing data extraction time by 50% and enabling faster access** to critical business data for analysis.
- Contributed to the development of a comprehensive documentation repository for data engineering processes and best practices, **resulting in improved knowledge sharing among team members and a 25% decrease in onboarding time for new hires.**

- Analyzed large datasets from various financial sources, including AWS data lakes, and created insightful reports and dashboards that aided senior management in **decision-making, improving forecasting accuracy by 20%**.
- Developed complex financial models to assess performance metrics, project future financial outcomes, and support budgeting and planning, enhancing the accuracy of budget forecasts by 15%.
- Leveraged **AWS services like S3, RDS, and Redshift** to integrate, store, and manage financial data, improving data accessibility and reducing retrieval time by 20%.
- Streamlined reporting processes by automating data extraction, transformation, and **loading (ETL) tasks using AWS Glue**, leading to a 30% reduction in the time required for financial reporting cycles.
- Collaborated with cross-functional teams to **analyze financial risks** and identify cost-saving opportunities, contributing to a 10% .

PROJECTS:

Real-Time Clinical Trial Data Management

- Developed a comprehensive **real-time data management system for clinical trials**, enhancing **monitoring and management** of trial progress, patient enrollment, and adverse events.
- Set up **Azure Data Factory to integrate data from multiple sources**, ensuring real-time updates and data consistency across the clinical trial management system.
- Integrated data from multiple sources using **Azure Data Factory, created real-time Power BI dashboards, automated data workflows with Python**, and managed data in SQL Server.
- Streamlined operations, **reducing data entry time by 30%, improved data accuracy and timeliness, and decreased time to market for new treatments by 15%**.

Financial Health Analytics Platform

- Developed an analytics platform aimed at improving the financial health of users by providing insights into their spending patterns and savings opportunities.
- Utilized Python for data analysis and machine learning, **leveraging open-source libraries such as Pandas, Scikit-learn, and TensorFlow**.
- Designed a scalable architecture using cloud-based services (**Azure Data Factory** for ETL, Azure SQL Database for data storage) and real-time data processing with Apache Kafka.
- Delivered actionable insights through interactive **dashboards in Power BI, helping users make informed financial decisions and improve their financial stability**.

Regional Crash Data Management and Analysis.

- **Collaborated in maintaining and expanding regional databases** by continuously refining **Python and MATLAB pipeline scripts**. This involved integrating new data sources and optimizing existing processes to accommodate evolving data structures and requirements.
- **Engaged in reviewing real-world crash events**, extracting valuable insights to improve injury prediction models, optimize crash detection algorithms, and characterize fleet crash exposure.
- **Conducted comprehensive data analysis using advanced statistical techniques**, contributing to the development of software tools where necessary. Topics of analysis included injury prediction, crash detection optimization, and fleet crash exposure characterization.

TECHNICAL SKILLS:

Languages:- Python, Javascript, C++, SQL, Java, HTML/CSS, R, .Net Frameworks.

Technologies:- AWS, Azure, React, Kafka, MySQL, PostgreSQL, MongoDB, Oracle, Ruby, Spring Framework, Agile Methodology, Angular, Chart.js, NLP, Data Warehousing, Alteryx, GTM, Cloud Infrastructure, Multitasking, SAS, CRM Systems, advanced analytics, Scala, JSON, Hadoop, DBT, Databricks, R&D Processes.

Libraries and Tools:- Jupiter, Fivetran, Docker, Git, Microsoft Excel, Snitch, Swift, Tableau, Microsoft Power BI, ETL, Google BigQuery, Data Hub, and Google Cloud Platform, SAS, Metabase, Snowflake, Looker, BI tools, ERP, Spark Streaming, Amazon Kinesis, Grafana, Elasticsearch.

Soft Skills:- Communication, Problem-solving, People management, Time management, Attention to detail, Data Modeling, Continuous learning, risk management, Adaptability.

EDUCATION:

University of North Carolina, Charlotte,

August 2022–December 2023

Masters in Computer Science; GPA: 3.6/4

CourseWork: Computer Architecture, Algorithm and Data Structures, Intelligence Systems, Computer networks, Cloud Computing, Data Structures Statistics, Mathematics, Economics.

CERTIFICATIONS:-

- I hold certifications in **AWS Cloud Practitioner, Analyzing and Visualizing Data with Microsoft Power BI, and Microsoft Certified Systems Administrator: Data Engineering with Azure**.
