Fullstack and Data Engineer

Early-career software engineer with a foundation in backend development, cloud services, and data workflows. I completed a software engineering certificate at Holberton School and have built projects using Python, SQL, AWS, and CI/CD pipelines. My experience includes designing APIs, working with databases, and automating infrastructure through Terraform and Docker. I'm eager to grow into roles across **Data Engineering, Fullstack Development, or DevOps**, bringing curiosity, adaptability, and a strong commitment to learning modern tools and best practices.

Technical Skills

- **Programming Languages:** Python, JavaScript/TypeScript, SQL
 - **Backend & APIs:** REST APIs, FastAPI, Flask, Spring Boot, Node.js
 - **Frontend:** Introductory React and Angular
 - **Databases:** PostgreSQL, MongoDB, Redis; exploring Snowflake and DynamoDB
 - **Cloud Platforms:** AWS (EC2, RDS, S3, Lambda, CloudWatch)
 - **Infrastructure & Automation:** Terraform, GitHub Actions
-

Project Experience

Expense Tracker API – *Spring Boot, PostgreSQL, Terraform* (May 2025 - Present)

- Developed backend services to track categorized expenses
- Implemented secure data access, validation, and exception handling
- Deployed infrastructure using Terraform and automated CI/CD with GitHub Actions
- Documented system behavior and deployment steps for reproducibility

Spotify Bot – GUI Automation & Data Extraction *Python, OpenCV, Tesseract OCR* (Sept - Oct 2025)

- Built a small automation script to interact with Spotify's desktop interface.
- Practiced using **OCR (Tesseract)** and **image recognition** to extract playlist and playback data.
- Simulated user actions to test reproducibility and validated extracted metadata.
- Documented the workflow and explored how it could connect to **NLP-based playlist recommendations**.

Inbox Automation & Orchestration (Internship) – *Python, AWS EC2, GitHub Actions* (Ago - Sept 2025)

- Built asynchronous workflows for email parsing and task routing using Redis pub/sub
- Deployed services to AWS EC2 and documented architecture for team onboarding
- Relevant to scalable design, cloud deployment, and backend service development

Education

Holberton School - Certificate, Computer Science & Software Engineering

(Feb-Nov 2024)

Universidad Interamericana - BA, Popular Music

(May-2014)
