EDUCATION

Northeastern University, Boston

Master of Science in Software Engineering

Expected May 2024

GPA: 4.0

University of Pune, Pune, India

Bachelor of Engineering in Computer Engineering

Aug 2018 - May 2022

GPA: 3.6

TECHNICAL SKILLS

Languages: Kotlin, Java, JavaScript, HTML/CSS, XML, JSON

Frameworks: Android, Android Architecture Components, Jetpack Compose, Node.js, Express.js, Apache Tomcat

Android Libraries: Retrofit, Room Database, Dagger-Hilt, Picasso, Glide, Gson, Moshi, Volley, Airbnb Epoxy, BillingClient

Tools: Git, AWS, GCP, Firebase

WORK EXPERIENCE

Shivendu Infotech

Jun 2020 - Dec 2020

Android Developer Intern

- Revamped an educational app for internal usage, merging both user and admin interfaces and resulting in a 20% increase in customer satisfaction KPI
- Coordinated with the backend team to improve the response time of the app by 100ms

PROJECTS

NoteWorthy | NodeJS, ExpressJS, MongoDB, Dagger-Hilt, Kotlin, Cyclic

Google Play

- Designed a full-stack application with **Node.js**, **Express.js**, and **MongoDB**, implementing user authentication and securing API routes for **CRUD** operations using JSON Web Token (**JWT**). Deployed backend on **Cyclic.sh**
- Built an Android app using **MVVM** design pattern and **Dependency Injection** in **Kotlin**, incorporating **Android architecture components** and **Jetpack libraries** to enhance the separation of business logic and UI controls
- Improved app performance by 25% by leveraging Kotlin **Coroutines** to handle long-running tasks efficiently

SecurePass | Android, RoomDB, Proguard, AES Encryption

- Devised a highly secure password management app, utilizing **NDK**, two layers of **AES 128-bit encryption**, and **Proguard** resulting in securely storing credentials
- Implemented **Single-Activity Architecture**, utilizing **Android Navigation Components** for seamless navigation
- Incorporated offline support through **RoomDB** and employed **Dagger-Hilt** for dependency injection

Pied Piper | Firebase, Kotlin Coroutines, Material Design

- Created a maintainable and testable audio streaming application. Employed **Firebase** as **BaaS** to scale the application eliminating the need to create APIs
- Utilized Firebase **Firestore** as a **NoSQL** database to store the metadata of the songs and **Firebase Storage** as an **object-storage service**. Incorporated **Exoplayer** to access Android's native media player to stream audio
- Programmed foreground service to display a **real-time notification** to see and control the currently playing song and achieved clean UI with Google's **Material Design**

EduNexus | Java, Firebase SDK, Android Studio

- Constructed an Android app using Java that enhances communication and transparency in educational institutions through efficient and real-time data sharing by administrators
- Exercised **RecyclerView** to display the data resulting in efficient resource allocation

LEADERSHIP and ACHIEVEMENTS

- Ranked 1st in India during the Google Devfest'21 Android Development Quiz
- Conducted training sessions on Kotlin and Android development and encouraged students in learning android development | <https://youtu.be/52DgX7m2LJ4>
- Initiated an Android Community of 120+ people in the college
