Prospect, KY 40059 | [shailjav@worktechmail.com](mailto:shailjav@worktechmail.com) | (210) 201-4946 | [linkedin.com/in/sv2345/](https://www.linkedin.com/in/sv2345/)

## SUMMARY

Financial Data Analyst with 5+ years of experience specializing in advanced Data Analytics and financial modeling for risk mitigation. Expertise in architecting and optimizing ETL Pipelines and performing Time Series Analysis using Python (Pandas, NumPy) and SQL across cloud platforms (AWS, Azure Data Factory). Proven ability to leverage Predictive Modeling and Statistical Testing (ANOVA) to enhance Revenue Forecasting accuracy by 15% and deliver high-impact Profitability Analysis via Tableau/Power BI, contributing directly to over \$2M in optimized capital allocation.

## SKILLS

**Languages:** Python (NumPy, Pandas, Matplotlib, seaborn), R, SQL, SAS

**Data Analytics:** Predictive Modeling, Regression Analysis, Time Series Analysis, Descriptive & Inferential Statistics, Statistical Testing (ANOVA), Exploratory Data Analysis, Data Wrangling, Data Integrity, Master Data Management, ETL Pipelines, SSIS, IBM SPSS

**Financial Analytics:** Financial Modeling, Financial Planning & Analysis, Ratio Analysis, Budgeting & Forecasting, Variance Analysis, Cash Flow Analysis, Profitability Analysis, Risk Scoring, KPI Design, Fraud Detection, Revenue Forecasting

**Databases:** SQL Server, MySQL, PostgreSQL, PL/SQL, MongoDB, Amazon DynamoDB

**Visualization Tools:** Tableau, Looker, Power BI (DAX, Power Query), Qlik, Advanced Excel (Pivot Table, VLOOKUP, KPIs)

**Cloud & Deployment:** AWS (S3, EMR, Athena, Lambda), Azure Data Factory, Docker, Kubernetes

**Other Skills:** Agile/Scrum, JIRA, Git, GitHub, A/B Testing, Hypothesis Testing, MapReduce, REST APIs

## EXPERIENCE

### Unum, United States

January 2025 – Present

#### Financial Data Analyst

- Developed an AWS Lambda-based solution for automated daily extraction and initial cleansing of Master Data Management (MDM) and implemented a Time Series Analysis model in Python (Statsmodels) to forecast insurance claim payouts, improving the accuracy of Revenue Forecasting by 15% and reducing variance against actuals.
- Designed and managed robust ETL Pipelines on AWS (S3, Athena) to ingest and clean high-volume financial transaction data, resulting in a 45% reduction in data processing latency for downstream Financial Modeling.
- Engineered a sophisticated Risk Scoring model using Regression Analysis in R to assess policyholder risk, and implemented rules for Fraud Detection that successfully flagged 20% more suspicious transactions before payout.
- Performed rigorous Descriptive & Inferential Statistics and Statistical Testing (ANOVA) on portfolio data, ensuring Data Integrity and compliance for regulatory submission with 99.9% accuracy.
- Collaborated with Financial Planning & Analysis (FP&A) teams to develop detailed annual Budgeting & Forecasting models, utilizing advanced Excel functions (Pivot Table, VLOOKUP) to reduce forecast error (MAPE) by 10%.
- Created interactive Power BI dashboards leveraging complex DAX to visualize KPIs related to claim processing efficiency and financial performance, enabling executive decision-making within 24 hours.
- Containerized core analytical scripts using Docker and automated their execution via AWS Lambda, ensuring scheduled execution and consistent data refresh for all financial models.

### Adons Softech, India

January 2019 – February 2023

#### Financial Data Analyst

- Performed extensive Data Wrangling and transformation on client financial records from MySQL and MongoDB using Python (Pandas), cleaning and standardizing over 300 GB of heterogeneous data for analysis.
- Conducted in-depth Profitability Analysis and Ratio Analysis for 10+ client accounts, identifying critical margin erosions that, when addressed, led to an average 12% increase in client operating income.
- Designed and executed Hypothesis Testing protocols and supported A/B Testing for product pricing strategies, using SAS and SQL to provide statistically significant results that informed market strategy.
- Developed and maintained ETL Pipelines using SSIS and custom PL/SQL procedures in SQL Server to ensure reliable data flow, improving data availability for analytical reports by 30%.
- Modeled future Cash Flow Analysis scenarios and performed detailed Variance Analysis against historical performance, providing early warning signals to the management team regarding liquidity constraints.
- Utilized Hadoop and MapReduce techniques to process massive log files and integrate them with structured data, enabling Exploratory Data Analysis on previously inaccessible unstructured data sources.
- Built comprehensive Tableau and Qlik dashboards for client reporting, focusing on visualizing trends in Master Data Management and data quality metrics, reducing client reliance on manual spreadsheets.

## EDUCATION

### Master of Science in Computer Science

Lindsey Wilson College, Columbia, Kentucky

March 2023 – December 2024

### Bachelor of Engineering in Computer Engineering

Gujarat Technology University, India

September 2016 – May 2019
