

Shobika Ravichandran

Senior Developer - Java Full Stack

+1 916 673 7369 shobikaravichand@gmail.com

Over **8** years of experience and expertise in software Analysis, Design, Development, maintenance, integration and deployment of Distributed Web and Client-Server Applications in Banking, Finance and Public Domain.

- Proficient in Design, Development and implementation of Enterprise Applications in **Java and J2EE Technologies**
- Experience in utilization of various J2EE packages and associated technologies such as **Spring, Hibernate, Junit, JDBC, JMS and Rest Services**
- Experience in Use Cases, Sequence Diagrams and Class Diagrams using **UML** and Design Patterns
- Expertise in **Spring framework**, extensively used **Spring MVC, Spring DI, Spring AOP, Spring JDBC templates and Spring Boot**
- Expertise in **Hibernate**, using Entity Class Associations, Criteria Queries and Projections
- Experience in Web Based GUI's using **JSP, HTML5, CSS, Angular, JQuery and Ajax**
- Experience working with **Spring Boot** to build **Restful Web Service** and designing **Micro services**
- Experience in using Version Control Tools **GitHub, SVN** and **Maven** based project structure
- Proficient in Database development using **Oracle and My SQL Server** in various
- Experienced in methodologies like Iterative, **Agile Scrum** and **waterfall**
- Effective communication skills and coordination between globally located teams
- Quick learner with ability to adapt to changes and ability to learn new concepts and technologies with sound analytical and problem solving skills

CORE SKILLS

<i>Programming Languages</i>	:	Java/J2EE, SQL/ PL SQL, Python, C++
<i>Technologies & Service API's</i>	:	JSP2.3, JSF2.3, JDBC, Servlets, JPA, JMS, Rest Service
<i>Development Framework</i>	:	Spring, Hibernate, EJB, RESTFUL2.0, Angular 4, Bootstrap
<i>Databases</i>	:	Oracle (8i/9i/10g/11g/12c), PL/SQL, My SQL, SQL Server
<i>Application Servers</i>	:	Apache Tomcat 8, JBoss5.X, Glassfish
<i>Web Services</i>	:	REST, JAX-RS, AXIS, Swagger, Postman
<i>Operating Systems</i>	:	Windows 10/8.1/7, UNIX/LINUX, MAC
<i>Apache Tools</i>	:	Log4j, Maven and ANT
<i>Integrated Development Tools</i>	:	Eclipse4.5, Net Beans, IntelliJ, Rational Application Developer
<i>Testing Tools</i>	:	JUnit, Mockito, Log4j
<i>User Interface Technologies</i>	:	HTML5, CSS3, Java Script, AJAX, XML, XSLT
<i>Version Control</i>	:	CVS, SVN, Github, Clear Case, Jenkins
<i>SDLC Methodologies</i>	:	Agile Scrum, Waterfall and Iterative model

EMPLOYMENT HISTORY

- Cognizant Technology Solutions, India – 2013 to 2018
- Bank Of America Continuum India – 2018 to 2019
- Department of Justice, State of California – 2021 to 2024

Professional Experience

Career Break – Parental Leave / Childcare

April 2024 – Present

- Took a planned break to care of child and personal development
- Stayed current with Java ecosystem developments, including Java 21, Spring Boot, and cloud-native best practices
- Completed online coursework on microservices architecture and AWS fundamentals
- Contributed to small personal and open-source projects to maintain hands-on coding skills

Department of Justice, State of California

IT Specialist I – Sr. Java Developer/ System Analyst

2021 to 2024

Technology: Java/J2EE, Hibernate/ JPA, Spring MVC, Spring Batch, Spring Security, Spring Boot, Rest Services (Micro Service), OAuth 2.0 , HTML5, CSS3, Angular 4, Junit, , MySQL, Oracle, Log4J2

Tools: Maven, GIT, ANT, Eclipse, Tomcat, Jenkins, Kubernetes, Jasmine, JMeter

Project Title: FSDU- Application Development Portfolio

Project Summary:

The Bureau of Firearms serves the people of California through education, regulation, and enforcement actions regarding the manufacture, sales, ownership, safety training, and transfer of firearms. The Firearms ADB application team supports by providing firearms expertise and information to law enforcement, legislators, and the general public in a comprehensive program to promote legitimate and responsible firearms possession and use by California residents. The California Firearms Application Reporting System (CFARS) is a web-based application that will allow an individual to report their firearms to the Department of Justice (DOJ) using California Reporting Information System (CRIS) reporting forms, as outlined in California firearms laws and regulations.

Responsibilities:

- Actively involved in analysis, design, development, system testing, and user acceptance testing
- Implemented new batch jobs leveraging Spring Batch, that allow users to load the files directly from different applications for review and processing
- Used Http services and JMS for asynchronous validations for the input fields of forms with data
- Developed and Maintained Java applications integrated with SQL for managed relational databases, including MySQL ensuring data consistency and security

- Utilized Java features, such as the HTTP Client API and Local-Variable Syntax for Lambda Parameters, to enhance the performance and efficiency of Java applications
- Leveraged continuous integration and continuous deployment (CI/CD) pipelines to create and maintain multi-stage deployment processes using Jenkins and Git
- Gained significant understanding and proficiency in utilizing Maven build tool for effectively managing project dependencies, generating build artifacts, and deploying complex applications
- Written the JUNIT Test to run the Spring Batches. Used Spring Batch to process the CSV files
- Developed objects using Spring Data JPA for integrating with database and to perform CRUD
- Used Single Sign-On (SSO) solutions using Spring Security and OAuth 2, providing a seamless authentication experience across applications
- Monitored server logs to support logs to support production activities with the help of log4j and also experienced in monitoring logs in developer portal
- Designed and executed automated functional, integration, and regression tests for Java applications using Selenium WebDriver
- Utilized Selenium Grid for parallel execution of tests on different browsers.
- Used JIRA for tracking bugs and managing pull requests, utilized Confluence for collaboration and sharing essential information, and employed either Bitbucket for maintaining source control reliability of the application

Bank of America Continuum India

Application Development – Sr. Java Developer

2018 to 2019

Technology: Java/J2EE, Hibernate, Spring Boot, Rest Services (Micro Service), Angular 4

Tools: Postman, ANT, Maven, Eclipse, IntelliJ, Tomcat, Jenkins

Project Title: Client Money and Protection System

Project Summary:

In the course of BofAML conducting designated investment business, there are situations where BofAML may hold client cash or custody assets. The Client Money system calculates how much client cash BofAML hold, enabling the firm to ensure that:

1. These funds are protected and held in segregated accounts
2. The funds are not used by the firm for our own investment purposes

The project involved making enhancements to the Client Money system to change the normal approach to Client protection process which is managed on a daily basis by using an excel macro process controlled by the regulatory reporting team. This is an extremely manual process involving multiple spreadsheet from various sources and therefore prone to error. The aim is to de-risk this process through automation and by onboarding it onto the Client Protection application as the 'AMRS FCM' Client Protection system.

The project involved designing a spring batch for processing an input feed file with the list of recipients. The batch would also read the file and convert it to an XML that can be read by Rest Services for generating the corresponding letters to be sent to recipients. The generated communication would then

be sent via one of the delivery methods depending on the notification preference of the recipient – Email, Text, Fax or Postal mail. The reports can be viewed on a dashboard built leveraging the Angular and UI technologies, which access the required data through the deployed Micro Services.

Responsibilities:

- Involved in defining user stories, assisted with product backlog and test case definition
- Worked on JIRA, Jenkins for Continuous Integration and Deployment
- Involved actively as a team member in designing requirements, developing system prototypes, state diagrams and work flow charts
- Worked on angular4 http services to call restful services to fetch data required to build the dashboard
- Designed APIs based on the Micro Service architecture and Implemented restful services leveraging Spring Boot capabilities

Cognizant Technology Solutions / Client: JP Morgan Chase

Application Development – Sr. Java Developer

2015 to 2018

Technology: Java/J2EE, Hibernate, Spring MVC, Web Services, HTML5, Angular

Tools: ANT, Maven, Eclipse, Tomcat

Project Title: Strategic Legal/Spend and Matter Management (ELM Passport)

Project Details: ELM Passport

JPMC utilizes a system called Passport to manage their legal spend. Law firm invoices services rendered and submitted electronically by the law firms. Invoices are tracked and routed through JPMC approver. Once approved, invoices are fed into JPMC account payable system. When invoices are submitted, they undergo automated testing to verify the firm abided by the billing rules set by JPMC. If they do not, the invoice is rejected & sent back to the firm for correction. If they do, the invoice is passed into Passport for JPMC approval. This was an existing tool and for our client we had to customize based on their business requirements.

Responsibilities:

- Interacted with the client team directly to understand the requirements
- Started working on Passport application with zero knowledge but now successfully implementing all customization changes without the help of Product Owner(ELM)
- Learned Groovy and Drools for this project
- Identified areas of improvement and provided long term fixes to the application across functional and performance related aspects
- Development, Unit testing and deployment was done for the customization in application. This includes adhering to release process through staging environments for zero defect releases
- Proactively fixing the change requests
- Documenting the application maintainability related steps for easy reference for self and team

- Ensured 100% production support during the peak season and handled the load and job failures including Weekend On-Call Support

Project Title: Compensation Planning and Analytics (CPA)

Project Details:

Compensation Planning and Analytics (CPA) needs to be rewritten and on-boarded onto the new framework that is currently leveraged by Comp Connect Utilities (CCUtils) rewrite project. Along with CPA rewrite, we have a few Database optimization work.

Responsibilities:

- Played role as a key developer to migrate from the old technology(CSF) to Spring
- Involved in Analysis and Design of the application modules in an effective manner in order not to miss any business functionality
- CPA needed to be rewritten using new light weight framework using Spring, HTML5 / Angular / JQuery

Cognizant Technology Solutions

Application Development – Java Developer

2013 to 2014

Technology: Java/J2EE, JSP, Servlets, EJB, MySQL

Tools: Eclipse, Tomcat, Wavemaker

Project Title: Management of Shift Scheduler

Project Details:

Develop a tool that forecasts and schedules the shifts with various algorithms for the projects that work in shifts to provide support.

Responsibilities:

- Analyzed the forecasting algorithm such as Time Series Decomposition Linear Additive App, Time Series Decomposition Linear Multiplicative App, Time Series Decomposition Exponential Additive App and Time Series Decomposition Exponential Multiplicative App and scheduling shifts implemented in java
- Played role as a key developer to provide java services and module owner in various areas of the application
- Involved in Analysis and Design of the application modules in an effective manner and coordinated various testing activities in the application within the team

Educational Qualification

Bachelor of Technology - Information Technology, Sri Ramakrishna Engineering College, Coimbatore
Affiliated with Anna University, Chennai (India)
