

Shubham Shailesh Tamhane Data Analyst

shubhamtamhane22@gmail.com | USA | +1(585) 363-9693 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Education

Master of Science, University of Rochester

08/2022 – 12/2023 | Rochester, USA

Data Science (GPA – 3.96/4)

Bachelor of Engineering, University of Mumbai

08/2018 – 05/2022 | Mumbai, India

Information Technology (GPA – 3.74/4)

Technical Skills

- **Languages & Development:** Python, SQL, R, NoSQL, Java, JavaScript, C/C++, React, Django, Flask, Node.js, Typescript
- **Databases:** MS-SQL, MySQL, Redshift, Snowflake, Big Query, PostgreSQL, MongoDB, SparkSQL, SSMS, Redis
- **Data Analysis /ETL tools:** Power BI, Tableau, Microsoft Excel, Jenkins, Azure, Databricks, MS Excel, Google Analytics
- **Frameworks & Tools:** NumPy, Pandas, Scikit-learn, Matplotlib, Flask, Django, Git, GitHub, Docker, CI/CD, Statistics, HTML, CSS, Agile, SAS, Hadoop, Hive, PySpark, VLOOKUP, Macros, VBA, JIRA, Miro, Google Analytics
- **Others:** Azure Synapse, SSIS, Clustering, Machine Learning, Agile Methodology, NLP, Tensorflow, Keras, PyTorch, Kafka

Work Experience

Data Analyst, Indiana University, School of Public Health

03/2024 – Present | Bloomington, USA

- Incorporated Microsoft SQL Server in combination with Python for in-depth analysis of healthcare datasets, exceeding 5M records, to derive insights from Electronic Health Record (EHR) data.
- Leveraged T-SQL to clean and preprocess extensive healthcare datasets, ensuring data integrity for a study on patient outcomes, which was conducted in compliance with HIPAA regulations.
- Performed comprehensive survival analysis to assess disease diagnosis over 10 years of clinical data, integrating demographic and treatment variables to provide detailed reports.
- Developed polynomial regression models in R, analyzing 25 years of previous birth rates and disease spread while factoring in seasonality and other pertinent social variables in USA.
- Conducted a meta-analysis of over 25 studies, including results from A/B testing, and visualized the findings using forest plots to summarize review results.

Data Science Intern, Regeneron Pharmaceuticals

06/2023 – 12/2023 | Tarrytown, USA

- Orchestrated ETL pipelines in Dataiku for time series forecasting on a quarterly interval for a inventory management system stored in Redshift with 30,000+ products.
- Employed a python-dash application invoking MLOps workflow to provide real-time estimations, customer analysis and model maintenance options to end users and stakeholders.
- Implemented ARIMA and ETS family of models in JMP for their clear interpretability, achieving 80% forecasting accuracy, thereby reducing material waste by 30% each quarter.
- Utilized Seeq to design interactive dashboards and alarms by fetching data from OSI PI, thus optimizing workflows and reducing task turnaround time for end users by 20%.
- Investigated predictive maintenance techniques to estimate Remaining Useful Life (RUL) of Mass Flow Controllers.

Data Analyst, Zalliant

09/2023 – 12/2023 | Amsterdam, USA

- Led a team of 3 analysts to systematically code and analyze video data of cow activities using Excel and Boris, focusing on identifying multiple behavioral patterns within the same footage.
- Designed a Tableau dashboard to display key performance indicators (KPIs) on cow behavior using data from Azure Blob, reducing decision-making time with real-time insights.
- Engineered optimization strategies resulting in a 99.6% reduction in sensor data collection frequency, thereby extending sensor battery life by 3 months.

Data Analyst, URMC – Center for Advanced Brain Imaging and Neurophysiology

09/2022 – 06/2023 | Rochester, USA

- Successfully managed and stored 5 TB of medical data on AWS S3, integrating over 1,200 patient records, diagnostic datasets, and 10,000 clinical reports to create a comprehensive data repository.
- Utilized Python (Pandas, NumPy) and SQL to process and clean data, effectively addressing 95% of missing values and outliers, ensuring the integrity and quality of datasets for analysis.
- Enhanced data retrieval and analysis capabilities, achieving a 40% reduction in query execution time, significantly improving overall data management efficiency in clinical research.
- Developed and automated ETL pipelines using AWS Glue and Python, leading to a 30% decrease in data processing time and enabling real-time data integration for timely healthcare decision-making.

Projects

Hospital Data Analysis using Power BI | [Dashboard Demo](#)

- Created an interactive hospital data dashboard in Power BI, integrating over 500,000 records from diverse Source.
- Engineered data models and used DAX for transformation, incorporating flexible filters for strategic insights.

News Data Engineering using Airflow, Snowflake and AWS | [Project Link](#)

- Developed an automated data pipeline using Python and Airflow on an EC2 instance, accessed via Putty, to fetch news articles about Apple Vision Pro from a specified API and transfer it to Amazon S3.
- Adopted AWS Glue and CLI commands to transfer data from S3 to Snowflake for simplifying the ETL pipeline.
