

SQL/Oracle Database Administrator

Sindhuja K
980-500-9816
ksindhuja880@gmail.com

SUMMARY

- Over **5 years** of extensive experience in database design, development with MS SQL Server versions 2017/2016/2014/2012 using SSIS ETL.
- Highly proficient in the use of T-SQL for developing complex stored procedures, triggers, tables, user functions, user profiles, relational database models and data integrity, SQL joins and query writing.
- Hands on experience in creating indexed views, complex stored procedures, effective functions, and appropriate triggers to assist efficient data manipulation and data consistency.
- Designed and implemented complex queries using PL/SQL for data extraction, transformation, and reporting.
- Conversant with all phases of the Software Development Life Cycle (SDLC) especially involving business process analysis, requirements gathering and analysis, detailed design, development, testing and post implementation support.
- Good knowledge of Normalization/De-normalization, data design methodology and building Referential Integrity.
- Integrated PL/SQL procedures with front-end applications and ETL processes to support seamless data flow.
- Developed and maintained ETL processes using Oracle SQL Loader and Data Pump for efficient data migration and transformation.
- Experienced in generating data reports using Stored Procedures, data migration, SSIS packages, cubes.
- Hands-on experience in T-SQL, writing complex queries, performing tuning and query optimization.
- Highly proficient in creating database objects like tables, indexes, views, user defined functions, stored procedures, triggers, cursors, data integrity and constraints.
- Maintained detailed documentation of database configurations, changes, and procedures, including records of backups, security modifications, and performance tuning activities. Participated in creating Drive Capacity Management reports and other documentation.
- Experienced in implementing and maintaining High Availability and Disaster Recovery solutions using technologies like Log Shipping, SQL Server Replication, Database Mirroring, SQL Server Clustering, and Always-On Availability Groups.
- Highly skilled in configuring and creating SSIS solutions for ETL and Business Intelligence Process for Data Integration and Migration services and managing Event Handlers, Package Configurations, Logging, System and User-defined Variables for SSIS Packages.
- Created and maintained PL/SQL scripts for data validation, integrity checks, and automated batch processing.
- Implemented robust backup strategies to safeguard data, regularly testing backup integrity. Conducted disaster recovery exercises to validate recovery plans, minimizing downtime and ensuring data availability during emergencies.
- Used VB scripts in the script task in SSIS packages.
- Developed dashboards and key Performance Indicators (KPI) with SQL Server Reporting Services (SSRS) and Power BI.
- Worked on Power BI and prepared dashboards using Tableau to make it more attractive. Writing stored procedures and developing reports using SSRS, Crystal reports.
- Expertise in using Business Intelligence Development Studio (BIDS) Graphical User Interface (GUI) to design SSIS packages for Data Management applications.
- Highly knowledgeable in Designing, Developing, and deploying various kinds of reports using SSRS using relational data.
- Worked on Data Analysis Expressions for accessing data directly from tabular SSAS database.
- Scheduled & distributed reports in multiple formats using SQL Server Reporting Services (SSRS) in Business Intelligence Development Studio.

- Experience in Reporting services, Power BI (Dashboards Reports), Crystal Reports, SSRS using MS SQL Server and in supporting services MDX technology of the analysis services.
- Experienced in managing IT service desks by following ITIL guidelines, ensuring quick resolution of user issues and maintaining SLA compliance.
- Organized, self-motivated and punctual with excellent oral and written communication skills, quick learner, can adapt quickly to a new technology, with ability to take new roles in minimum time and little training.
- Managed and resolved ServiceNow incidents, providing 24x7 support for critical production systems, including participating in on-call rotations, ensuring minimal downtime and quick resolution of incidents with SLAs.

Education:

Masters in Information Systems and Technology

Technical Skills:

Operating Systems	Windows, Linux
Databases	MS SQL Server 2019/2017, Azure SQL DB, Oracle, MS Access
Scripting/Programming	Transact SQL (T-SQL), PL/SQL, Python, R, HTML, XML, CSS, jQuery
Cloud	Microsoft Azure (Azure SQL DB, Azure Synapse, Azure Data Factory)
BI/Reporting	SQL Server Reporting Services (SSRS), SQL Server Integration Services (SSIS), SQL Server Analysis Services (SSAS), Power BI, Tableau.
Database Tools	SQL Profiler, SQL Query Analyzer, Management studio Index Analyzer, DTS Import/Export, Backup Server, Replication server, SQL Agents, SQL Alerts, SQL Jobs.
Tools and Packages	SQL Server Management Studio (SSMS), Enterprise Manager, Business Intelligence Development Studio
Other Tools	MS Visio, Visual Studio, Azure DevOps, JIRA.

Professional Experience:

Client: VectorUSA – Charlotte, NC

April 2024 – Till Now

Role: SQL Server Database Administrator

Responsibilities:

- Effectively managed Microsoft SQL Server environments to ensure peak performance, security, and reliability across production, test, UAT, and development databases.
- Managed ServiceNow alerts related to disk space, job failures, I/O issues, and high CPU and memory utilization.
- Handled troubleshooting and resolution of various database issues, such as integrity, performance, blocking/deadlocking, connectivity, and replication challenges.
- Checked backups, error logs, and SQL logins, addressing failures or alerts and creating trouble tickets to collaborate with technicians from other departments.
- Engaged in the quarterly Drive Capacity Management report, documentation creation, and regular reviews.
- Experienced in managing indexes and statistics, which involves creating, modifying, and optimizing indexes to boost database performance and query efficiency.
- Utilized ITIL Change Management principles to coordinate and execute system upgrades while minimizing business disruption.
- Developed and maintained ETL processes using Oracle SQL Loader and Data Pump for efficient data migration and transformation.
- Enhanced indexes through defragmentation and rebuilding, leading to improved database performance and a 30% reduction in query execution times.
- Created stored procedures to trigger email notifications for SQL Server issues, cutting response time to critical alerts by 50%.

- Experienced in implementation and maintenance of High Availability (HA) and Disaster Recovery (DR) solutions, as well as conducting complex query tuning and performing routine database maintenance tasks such as index rebuilding, query optimization, and performance tuning.
- Having hands on experience in HADR processes including Log Shipping, SQL Server Replication, Database Mirroring, SQL Server Clustering, SQL Server Always-On Availability groups
- Worked on Oracle performance tuning, analyzing execution plans, using hints, and optimizing PL/SQL code to improve query efficiency
- Good understanding of writing SQL queries and pulling data from SQL server.
- Managed Oracle databases, performing installations, upgrades, patches, and routine maintenance for high availability and reliability.
- Proactively analyzed, troubleshooted, and addressed real-time database issues, providing thorough solutions and improving system stability.
- Applied row-level security to data and possess a solid understanding of application security layer models in Power BI.
- Designed and optimized PL/SQL stored procedures, functions, triggers, and packages to improve database performance and ensure data integrity.

Client: Equiscript LLC –North Charleston, SC

January 2023 – April 2024

Role: SQL Developer/PowerBI

Responsibilities:

- Architected and designed relational databases with a focus on performance, scalability, and reliability.
- Created, modified, and enhanced SQL Server Agent jobs and maintenance plans to automate routine tasks, ensuring consistent database health and performance.
- SQL Server Deployments and administrations includes backup and recovery and optimization
- Utilized Dynamic Management Views (DMVs) for proactive monitoring SQL Server health and performance Optimization, identifying potential issues before they impacted production.
- Created tables, views, stored procedures, functions, CTE and triggers on regular basis.
- Responsible for managing the lifecycle of the SQL Server database platform across DEV, Test, Stage, UAT, and Production environment.
- Performed regular database maintenance activities, including backup and recovery, replication management, and index rebuilding/reorganization to ensure optimal database performance and reliability.
- Coordinated with cross-functional teams to deploy large-scale systems, aligning with business objectives and technical requirements to deliver robust solutions.
- Optimized indexes through defragmentation and rebuilding, improving database performance and reducing query execution times by 30%.
- Monitored and analysed database performance metrics, providing actionable recommendations that led to significant improvements in system performance and resource utilization.
- Worked on troubleshooting and resolving various database issues, including integrity, performance, blocking/deadlocking, connectivity, and replication problems.
- Worked on continuous process improvement initiatives to align IT services with business goals using ITIL frameworks.
- Created, Maintained & scheduled various reports in Power BI like Tabular Reports. Explore data in a variety of ways and across multiple visualizations using Power BI.
- Involved in complete SSIS life cycle in creating SSIS packages, building, deploying, and executing the packages in both the environments (Development and Production).
- Designed and built high performance ETL packages to migrate and manipulate data from MS Excel and SQL Server by using SSIS.
- Transforming and Loading (ETL) data from Excel, Flat file, Oracle to MS SQL Server by using SSIS services.
- Extensively used Joins and Sub-Queries to simplify complex queries involving multiple tables.
- Used Indexing strategies and query optimization techniques to optimize Stored Procedures and long running queries.

Environment: SQL Server, Power BI, Business Intelligence Studio, T SQL, Erwin, MDX, ERWIN, MS Excel.

Client: Star Health Insurance, Hyderabad, India

January 2019 – December 2021

Role: MSBI Developer

Responsibilities:

- Installed, configured, and managed SQL Server High Availability solutions, including SQL Server Clustering (Active-Active, Active-Passive) and SQL Server Always-On Availability Groups, resulting in 99.99% uptime and enhanced disaster recovery capabilities.
- Leveraged strong technical knowledge in Microsoft SQL Server administration to manage and maintain the SQL Server database estate, ensuring high availability and optimal performance.
- Analysed database requirements and recommended appropriate design strategies. Developed and implemented solutions as per customer expectations while maintaining comprehensive documentation.
- Experienced with Windows Server environments and Active Directory management, ensuring proper disk configurations and system stability.
- Specialized in query optimization, enhancing the performance of complex SQL queries by implementing indexing strategies, rewriting T-SQL queries, and analysing execution plans to achieve significant reductions in execution time by up to 50%.
- Applying patches (SPs, CUs, SUs, Hot fixes) both on stand-alone and cluster installations.
- Implemented robust data protection and data security measures, ensuring compliance with industry standards to safeguard sensitive information and prevent data breaches.
- Managing release and Change Management tickets for production server changes and deployments.
- Worked on ServiceNow alerts for Disk space, job failures, I/O, CPU, memory high utilization.
- Managed SQL Server Replication, ensuring data consistency and availability across multiple servers. Handled replication setup, monitoring, and troubleshooting.
- Working on quarterly Drive Capacity management report and Documentation creation and periodic review.
- Involved with Query Optimization to increase the performance of the Report. Analyzed and troubleshoot performance tuning SQL and complex SSIS packages.
- Experienced in working with DAX commands to pull up more calculated data out of the tables.

Environment: MSBI, SQL Server, SSIS, SSRS, Visual Studio, T-SQL, Excel, Access, Windows.
