

Sohail Yawer Shaik

213-284-1636 | sksohailyawer@gmail.com | github.com/Sohail-Yawer | USA (Open to relocate)

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, Java, SQL, C#, C/C++

Front-End: Angular, React, Next.js, HTML/CSS

Back-End: Spring Boot, Node.js, Express, FastAPI, Flask, REST APIs

Data/ML: pandas, NumPy, Matplotlib, scikit-learn, PyTorch, TensorFlow, LangGraph

Databases: Oracle SQL, PostgreSQL, MySQL, MongoDB

Cloud/DevOps: AWS, GCP, Oracle Cloud (OIC, OAC), Docker, Jenkins, Git, CI/CD

Testing: pytest, JUnit, Postman, Selenium

Practices: Agile/Scrum, Git workflows, code reviews, JIRA, Confluence

EXPERIENCE

Inspire Brands (via S2 IT Group)

June 2024 – Present

Software Developer

Atlanta, GA

- Built and **owned** scalable full-stack services in **Java** and **Angular (TypeScript)**, powering daily sales and royalty reporting across Dunkin' and Baskin-Robbins.
- Owned the design** of a tiered, threshold-based approval workflow for post-upload sales adjustments, routing negative adjustments through regional approver levels by financial exposure, which removed single-approver bottlenecks and gave franchisees a predictable, auditable correction path.
- Designed and integrated backend services with Oracle Fusion ERP and AR platforms via secure **REST APIs**, improving data consistency, fault tolerance, and synchronization across enterprise systems.
- Drove resolution** of a sales-reporting discrepancy blocking franchise financial reporting, tracing Oracle Integration Cloud (OIC) logs to a portal validation gap on high-value transactions and shipping a **hotfix** that also corrected a latent sales misclassification affecting brand attribution.
- Built and maintained automated test suites using **JUnit** and **Postman** to validate backend endpoints across SIT, UAT, and production environments.
- Supported real-time analytics via OIC and Oracle Analytics Cloud (OAC) dashboards; documented designs and API contracts in Confluence for team-wide alignment.
- Collaborated within a **cross-functional team of 5** in an **Agile/Scrum** workflow with product owners and architects, driving phased rollouts through sprint planning and code reviews.

Easley Dunn Productions Inc

Feb 2024 – June 2024

Software Developer

Los Angeles, CA

- Developed high-performance game logic and backend services for the title Spurpunk using **Unity (C#)** and **JavaScript**, engineering low-latency event handling and state synchronization for real-time responsiveness across devices.
- Tested and validated **REST** and SOAP APIs with **Postman**, catching integration issues early and improving client-server reliability for event logging and game-state sync.
- Designed and maintained **CI/CD** pipelines with **Git**-based workflows to automate build, test, and release cycles, cutting deployment time by 15% and improving release consistency.
- Defined key performance indicators (KPIs) and integrated telemetry dashboards to improve runtime diagnostics and in-game performance monitoring.

University of Southern California

June 2022 – Dec 2023

Software Developer

Los Angeles, CA

- Enhanced the DPS front end with **React**, WordPress, HTML/CSS, and **Python**, improving usability and access to training modules by over 30%.
- Built data pipelines and interactive PowerBI dashboards from real-time crime data, using **Python** (pandas) and **SQL** to surface incident patterns for public-safety resource planning.
- Engineered a data migration of 1000+ users from SolarWinds Help Desk to Jira, scripting custom pipelines to improve data security and long-term maintainability.
- Partnered with department stakeholders to translate reporting needs into responsive dashboards, optimizing query and drill-down performance.

HaRVI Lab, USC

May 2022 – Sep 2022

Graduate Student Researcher, Machine Learning

Los Angeles, CA

- Designed and trained FingerNet, a 17-layer custom **CNN** in **TensorFlow** and **PyTorch** for contactless 3D fingerprint reconstruction, achieving up to 99% accuracy.
- Built robust preprocessing pipelines for normalization and gradient estimation, enabling reliable 3D minutiae extraction from raw fingerprint images.
- Implemented gradient-based 3D reconstruction algorithms and co-authored published research on contactless biometric authentication.

SmartBridge India

May 2019 – Aug 2019

Machine Learning Intern

Hyderabad, India

- Performed exploratory data analysis on 22,000+ superstore transactional records to identify key sales and profit drivers.
- Built and compared regression models (KNN, Linear, Ridge, Lasso, Random Forest, Decision Tree) in **scikit-learn** to predict sales volume for a target profit, reaching 80% test accuracy with a Decision Tree Regressor.
- Serialized the best model with pickle and deployed it locally as a **Flask** web app for interactive sales predictions ([code](#)).

PROJECTS

TaxGPT – Multi-Agent RAG Assistant | *Python, FastAPI, LangGraph, Anthropic API* (Stealth Startup)

- Built a multi-agent tax assistant orchestrated with **LangGraph**, coordinating specialized agents through a ReAct reasoning pattern to decompose and answer complex tax-domain queries.
- Designed retrieval-augmented generation (RAG) pipelines that ground responses in source tax documents, retrieving and injecting relevant context at query time.
- Engineered **FastAPI** backend services exposing the agent workflow through **REST** endpoints, integrating the **Anthropic API** for reasoning and generation.
- Implemented hallucination-mitigation strategies, including context grounding and response validation, to improve answer reliability and traceability.

Yelp Restaurant Search (Web + Android) | *Angular, Node.js, GCP, Java, Android Studio, Yelp API*

- Built a full-stack restaurant-search platform with an **Angular** front end and **Node.js** backend on **GCP** for web, plus a native Android client in **Java** (Android Studio), both consuming Yelp REST/SOAP APIs.
- Implemented keyword search with auto-complete and rating-based sorting to return top matches near the user, surfacing pricing, ratings, and reviews through clean UI components.
- Integrated Google Maps to display restaurant locations and reviews, and added a reservation-booking flow with multi-restaurant validation to prevent scheduling conflicts.

EDUCATION

University of Southern California

Los Angeles, CA

Master of Science in Computer Science

JNTUH College of Engineering

Hyderabad, India

Dual Degree: B.Tech in Computer Science and M.B.A
