

MS BI Developer

Sravani Sampelli

Email: sravanisampelly63@gmail.com

Mobile: 9139375529

Professional Summary:

- Over **4+** years of IT experience in Database Design, Development, Implementation in **SQL Server**, and providing **ETL/Business Intelligence** solutions using Microsoft Tools.
- Well-qualified Business Intelligence Developer with experience in designing, developing, and implementing data and analytical solutions. Exceptional skills in Data modeling, **ETL** Process, Data Warehousing, Data mining, Database management, and Data Analysis/Reporting with **Power BI**, UI/UX experience, and excellent communication skills.
- Highly proficient in all areas of **RDBMS** concepts, used **T-SQL** for developing complex Stored Procedures, Triggers, Tables, User Defined Functions, views, indexes, user profiles, Relational Database models, Data integrity, and query writing.
- Excellent **T-SQL** development skills to write complex queries involving multiple tables, great ability to develop and maintain stored procedures, triggers, and user-defined functions.
- Experience in designing, developing, and maintaining **Business Intelligence (BI)** database applications using **MS SQL Server** 2019, 2017, and 2016 in Development, Test, and Production Environments.
- Adept at working with data from different sources, creating data models, developing custom visualizations, and writing **DAX** code to create calculated columns and measures.
- Proven ability to collaborate with stakeholders to understand their data analysis needs and deliver solutions that provide actionable insights.
- Involved in complex data mapping, modeling data, and understanding business data relationships.
- Highly proficient in the use of **T-SQL** and **ETL** for developing complex Stored Procedures, indexes, Tables, Views, User Defined Functions, Relational Database models, Data integrity and **SQL** joins
- Expertise in writing advanced **SQL** queries and Stored Procedures based on business requirements, building a data warehouse using **SSIS (ETL tool)** packages to blend data from multiple sources, and developing interactive **Power BI** and **SSRS** data visualizations.
- Knowledge of programming languages such as **C# .NET, Python, R, JavaScript, and HTML**
- Experience with iterative and incremental approaches of agile environment for developing project solutions.
- Experience in creating database objects such as Functions, CTE, Indexes, Tables, Views, and Triggers using **T-SQL** and performing tuning and optimization of queries for **ETL** Packages and **SSRS** reports.
- Proficient in **SQL Server Integration Services (SSIS)** to design **ETL** Packages that extract data from various data sources and databases, and transform and load data into a staging database and data warehouse.
- Skilled in performing data transfer between different heterogeneous systems (Excel, Flat Files, XML file, **JSON, OLTP DB**) and **SQL** servers as part of Data migration and data maintenance.
- Experience in data modeling, development, and maintenance of database applications using **SQL Server** 2019/2017, **SSIS/SSRS/SSAS** in **OLTP/OLAP/BI** environment.
- Experience in **BI Solutions (ETL & Reporting)** using **SSIS, SSAS, SSRS**, and **T-SQL** Programming using **DDL, DML, and DCL** commands for various business applications.
- Strong knowledge of Data Warehousing Concepts and Data Modeling Techniques like Dimensional Data Modeling, Star Schema Modeling, and snowflake modeling.
- Experienced in **Microsoft Business Intelligence Suite (Power Pivot, Power View, Power Query, Power Maps, Power BI Desktop, Power BI Service, Power BI Mobile App)** and **DAX** functions.
- Proficient Knowledge in dealing with **RDBMS** including **E/R Diagrams, Normalization, Constraints, Joins, Keys, and Data Import/Export**.
- Ability to work well independently with minimal supervision, and remain flexible in a dynamically changing environment to meet shifting organizational demands with an attention to detail-oriented mindset.
- Hands-on experience on **SQL SERVER** 2016 new features like Query store, IN memory **OLTP**, and database stretching to **Azure** platform.

TECHNICAL SKILLS:

RDBMS	MS SQL Server 2019/2017/2016/2014/2012/2008/2008R2, MS Access, Sybase Server
Programming Languages	C, C++, Java, T-SQL, Oracle, VB scripts
Tools & Packages	SQL Server Management Studio, Enterprise Manager, Profiler, Business Intelligence Development Studio (BIDS), DTS, ETL, Visual Studio .NET, TOAD
BI Tools	SQL Server Reporting Services (SSRS), SQL Server Integration Services (SSIS), Data Transformation Services (DTS), SQL Server Analysis Services (SSAS), MS Visio, Power BI
Application Packages	Microsoft Office Suite, MS Outlook, Microsoft Office SharePoint Server (MOSS) 2007, Microsoft Performance Point Server 2007, ProClarity
Operating Systems	Windows 10/8.1/8/7/XP, Windows Server 10/8.1/8/7/XP
Web Technologies	HTML, JavaScript, XML, XPath
Hardware and Operating Environments	Windows XP, Windows VISTA, Windows 7M, Windows 10, IBM 20XX, MAC OS, Linux (Mint, Ubuntu).

EDUCATION:

Masters in Computer Science from the University of Central Missouri, USA.

Professional Experience

Client: Nomi Health- Orem, UT

March 2024- Present

Role: SQL/Business Intelligence Developer

Responsibilities:

- Designed and developed custom business intelligence solutions using **Power BI**, including data modeling, ETL processes, and report development.
- Analyzing customer, transaction, market, and other internal data sources to identify trends, risks, and opportunities.
- Developed and managed secure data solutions on **Azure SQL** Database and **Azure Data Lake Storage (ADLS)** to store and process large healthcare datasets, ensuring **HIPAA** compliance and data privacy.
- Built end-to-end ETL pipelines using **Azure Data Factory (ADF)** to ingest and transform healthcare data from various sources, optimizing data flow for real-time processing and reporting.
- Designed and maintained data warehouses using **Azure Synapse** Analytics to support scalable, high-performance analytics for patient records, billing, and clinical data.
- Implemented data transformation workflows with Databricks and **PySpark** on **Azure**, enhancing performance for large-scale health data analytics and machine learning model training.
- Secured healthcare data assets with **Azure Active Directory (AAD)** and **Azure Key Vault** to control access and protect sensitive information, complying with industry regulations like **HIPAA**.
- Conducted real-time analytics with **Azure Stream** Analytics to monitor health data streams for immediate insights, enabling proactive responses to patient care and operational needs.
- Designed physical database model on SQL Server 2016 **RDBMS** and created database objects using DDL commands and implementing Constraints to maintain Data Integrity for database development.
- Create insightful **BI**-based reports to monitor and highlight contributing factors to financial and operational variances and anomalies helping the executives in key decision making.

- Developed Data Source and Data Source View to create a logical view of the data to be placed in **OLAP** Cubes using SQL Server Analysis Services (**SSAS**) projects.
- Designed **ETL** packages dealing with different data sources (SQL Server, Flat Files, FTP, XML, etc) and loaded the data into target data sources by performing different kinds of transformations using SQL Server Integration Services (**SSIS**).
- Performance-tuned long-running lengthy **SSRS** reports and optimized rendering time by 10 times the actual time.
- Created Data Flow Diagrams (**DFD**) to migrate data from legacy databases MS-Access, and Oracle to the SQL Server Database and load them into appropriate tables using **SSIS** Packages
- Designed, maintained, and supported operational reports such as dashboards, charts, and **KPI**-based scorecards using **SSRS**, **Power BI**, and Report Builder connecting to various data sources, importing data, and transforming the raw data to meet the business requirements.
- Extensively used **SSIS** transformations such as Lookup, Derived column, Data conversion, Aggregate, Conditional split, **SQL** task, Script task Send Mail task, etc.
- Wrote **DAX** queries to analyze the business data and Implemented row-level security on data along with an understanding of application security models in **Power BI**.
- Analyze and present data to help the company make important decisions by performing DAX queries using **Power BI** tools.
- Defined Data Source and Data-Source views based on views in Data Source and set logical Primary keys on tables to support the relationship between Fact and Dimensional tables in **Snow flex** schema
- Developed Tables, Views, and Stored Procedures using **SQL Server Management Studio**.
- Conducted and automated the **ETL** operations to Extract data from multiple data sources, transform inconsistent and missing data into consistent and reliable data, and finally load it.
- Wrote various **T-SQL** queries for constructing database objects such as Tables, Stored Procedures, CTEs, Temp Tables, User-defined Functions, Views, and Indexes based on business requirements.
- Created and produced standardized and custom reports for the business as needed using SQL Server Reporting Services (**SSRS**).
- Extensively used **DDL/DML** commands in **T-SQL** to define Databases, Tables, and Views.

Environment: MS Azure Stack, Power BI Desktop/Service, MS SQL Server 2019, SSRS, SSIS, SSAS, Microsoft SQL Server Management Studio, Visual Studio 2019, GIT

Client: Guardian Life Insurance, Holmdel, NJ

Jan 2023 – Feb 2024

Role: SQL/Power BI Developer

Responsibilities:

- Designed, developed, and implemented data models to generate insights and delivered analytical data visualizations to business users using **Power BI** reports.
- Created **ETL** Packages, cleansed data, and worked on system integration and data migration to bulk load data from multiple sources into the **CRM**.
- Demonstrated outstanding communication skills to gather business requirements from end-users and translate them into a meaningful visual product.
- Developed analysis reports and visualization using **DAX** functions like table function, aggregation function, and iteration functions.
- Effectively communicated and interacted with business and technical personnel to solve complex, data-related business and technical problems.
- Used **DAX** function to compute calculated columns and measures. Implemented Row Level Security (RLS) and troubleshoot **Power BI** reports by identifying poorly performing measures, relationships, and Visuals.
- Designed and developed different types of reports, including drill-through reports, sub-reports, and drill-down reports based on business requirements using **SSRS**.
- Configured SSIS packages to extract, transform, and load (**ETL**) data from different sources into destination targets such as data warehouse, flat file, Excel, and OLE DB, using SQL Server Integration Services.
- Created stored procedures, views, triggers, and constraints to implement database consistency and integrity.

- Imported data from SQL Server DB, and **Azure SQL DB** to Power BI to generate reports.
- Created Dax Queries to generate computed columns in **Power BI**.
- Used **Power BI**, and Power Pivot to develop data analysis prototype, and used Power View and Power Map to visualize reports.
- Created complex **SSAS** cubes with multiple fact measures groups, and multiple dimension hierarchies based on the OLAP reporting needs.
- Creating reports using SQL Reporting Services (**SSRS**) for customized and ad-hoc Queries.
- Generated monthly reports and budget analysis to drive forecast production plans with SQL Server Reporting Services (**SSRS**).
- Used various **SSIS** tasks such as Conditional Split, Derived column, data validation checks, etc. during staging, before loading the data into various sources.
- Successfully migrated **SSIS** packages from development to test and production environment using SSIS Configuration files and development wizard.
- Published **Power BI** Reports in the required originations and Made Power BI Dashboards available to Web clients and mobile apps.
- Generate internal reports using **MS SQL** and Salesforce Application to provide analysis and periodic feedback for strategic use by management.
- Created Power BI Reports and Dashboards using different types of Slicers and Visualizations like Bar Charts, Line Charts, Graphs, Pie Charts, etc. to make it more attractive and explore data in a variety of ways across multiple visualizations.
- Performed **DAX** queries and created **KPIs** with clear objectives for business needs.
- Enhanced and deployed the **SSIS** Packages from the development server to the production server.
- Used various sources to pull data into Power BI such as **SQL Server**, **Oracle**, **SharePoint** Online, **Excel**, CSV, etc.

Environment: MS SQL Server 2016/2014/2012, SSIS/SSAS/SSRS, ETL, T-SQL, Visual Studio 2019, SQL Server Profiler, Dashboard, DAX, Power BI, SQL Server Management Studio, SQL Server Data Tools (SSDT), Power BI.

Client: Clover Infotech, Mumbai, India

Mar 2019 - Nov 2021

Role: MSBI Developer

Responsibilities:

- Used SQL Server Integration Services (**SSIS**) to extract, transform, and load (**ETL**) data to the data warehouse from different sources like CSV, Excel, TXT, and database sources such as **SQL Server** database.
- Gathered business requirements from Actuarial, Claims, Accounting, and Database Marketing departments on new projects.
- Involved in database design and creation of tables, stored procedures, indexes, database check constraints, and business rules using **T-SQL**, and responsible for performance tuning and optimization of SQL queries and indexes.
- Created complex **SSAS** cubes with multiple fact measure groups and multiple dimension hierarchies based on the **OLAP** Reporting needs
- Designed and developed **ETL/SSIS** Packages and Stored Procedures to load Dimension and Fact tables.
- Created Master ETL Package to call child ETL packages and deployed them on **MSDB** in the Integration Services Server.
- Used **ETL** to implement the Slowly Changing Dimension Transformation to maintain Historical Data in the Data warehouse.
- Developed complex calculated measures using Data Analysis Expression language (**DAX**).
- Designed and developed **ETL** packages to extract, transform, and load data to **OLAP** database using SQL Server Integration Services.
- Created complex Stored Procedures, Triggers, Functions (UDF), Indexes, Tables, Views, and other SQL code and SQL joins for applications.

- Developed and optimized database structures, stored procedures, Dynamic Management views, **DDL** triggers, and user-defined functions.
- Creating reports using SQL Reporting Services (**SSRS**) for customized and ad-hoc Queries.
- Generated monthly reports and budget analysis to drive forecast production plans with SQL Server Reporting Services (**SSRS**).
- Designed and developed Fact and Dimension tables in **OLAP** system using **T-SQL**.
- Hands-on experience on SQL SERVER 2016 new features like Query store, IN memory **OLTP**, and database stretching to Azure platform.
- Configuring Azure services **PaaS/IaaS** and migrated database from on-premise to Azure.
- Experience in creating and maintaining **Azure SQL** databases using the right tiers
- Migrated on-premise **SQL** databases to **AZURE** Portal.
- Created **SQL Database** on **Azure** based on DTU as per client's requirements.
- Monitored Azure databases on a weekly basis to cut costs on a DTU basis.
- Created **SSIS** package for file transfer from one location to another using **FTP** task.
- Created ETL package in **SSIS** with error handling and worked with different methods of logging in SSIS.
- Used **SQL Server** to schedule ETL package executions and troubleshoot job failures.
- Developed and implemented reporting, analytics, and Data visualization solutions with Power BI.
- Developed SSIS Packages to Extract, Transform, and Load (ETL) data into the **Data warehouse** from SQL Server.
- Involved in automating **SSIS** Packages using SQL Server Agent Jobs. Generated Parameterized reports, Sub reports, Drill down, and Drill through reports using SQL Server Reporting Services (**SSRS**) working along with **MDX** queries.
- Embedded **Power BI** reports on the SharePoint portal page and also managed access to reports and data for individual users using Roles.
- Familiar with Dimensional Modeling, **ER Modeling**, Data Marts, **Star / Snowflake Schema**, FACT, and Dimensional tables.
- Design and Implement reporting solutions using Reporting Services, **Power BI**, or other data visualization tools.
- Created reports using **SSRS** while modifying various report models with different source fields and model objects.
- Integrated **Power BI** with **Microsoft Azure** and SharePoint to provide a seamless user experience.

Environment: MS SQL Server 2016/2014/2012, SSIS, SSAS, SSRS, Power BI, DAX Visual SourceSafe, ETL, T-SQL, TFS, BITS, MS Excel, Windows 7.
