SUMMARY

Python Developer with around 4 years of experience architecting scalable backend systems, RESTful APIs, and data pipelines across healthcare and enterprise SaaS domains. Specialized in building high performance microservices using FastAPI, Django, and Flask, processing 10M+ daily transactions with 99.9% uptime. Expert in cloud-native development (AWS/Azure), containerization (Docker/Kubernetes), and CI/CD automation. Proven track record of reducing system latency by 40%, optimizing database performance, and delivering production-ready solutions in Agile environments.

SKILLS

Programming & Frameworks: Python (Advanced OOP, Functional Programming, Error Handling, Decorators, Generators), Django, Flask, FastAPI, SQLAlchemy, JavaScript, ReactJS, typescript, Next.js

Web & API Development: RESTful API design & integration, GraphQL, Authentication & Authorization (JWT, OAuth2), API testing (Postman, PyTest), OpenAPI/Swagger

Databases: SQL (PostgreSQL, MySQL, SQLite), NoSQL (MongoDB, Redis, DynamoDB), Database Optimization & Query Tuning

Cloud & Deployment: AWS (EC2, Lambda, RDS, S3), Azure, GCP, Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins, GitLab CI), Terraform, Azure DevOps

Testing & Quality Assurance: PyTest, UnitTest, Test-Driven Development, Pylint, Black, MyPy, Integration Testing, Regression Testing

Data Handling & Processing: Pandas, NumPy, JSON/XML/CSV parsing, Message Queues (RabbitMQ, Kafka), ETL pipelines, Data Wrangling, Data Cleaning

AI & Advanced Technologies: Generative AI (LLMs, GPT, fine-tuning), Retrieval-Augmented Generation (RAG), AI tools (LangChain, LlamaIndex, Hugging Face), MCP (Model Context Protocol), Cursor AI, Prompt Engineering, NLP & Embeddings

Additional Skills: Asynchronous Programming (asyncio, aiohttp), Security (HTTPS, Encryption, OWASP), Git/GitHub, Agile/Scrum, System Design, Collaboration Tools (Jira, Confluence, Notion), ORM frameworks

EXPERIENCE

PTC, USA | Python Developer

Jan 2025 - Current

- Architected and deployed microservices-based backend infrastructure using FastAPI and Flask, serving high-volume API traffic with improved response times and maintaining 99.95% uptime across PTC's cloud ecosystem.
- Designed modular microservices and event-driven data pipelines integrating REST APIs, authentication flows, Azure storage, and RabbitMQ/Kafka, enabling real-time synchronization of IoT and PLM data with zero data loss.
- Built automated ETL workflows using Python, Pandas, and SQL to ingest and normalize product lifecycle data from 15+ sources, reducing manual processing by 60% and supporting near-real-time analytics.
- Developed reusable Python libraries for ML inference, data validation, and audit logging, accelerating feature delivery by 40% and improving consistency across engineering teams.
- Optimized PostgreSQL database performance through indexing strategies and query tuning, cutting execution times by up to 50% for high-traffic endpoints and enhancing backend responsiveness.
- Implemented comprehensive monitoring, alerting, and CI/CD automation using Python scripts, CloudWatch/Prometheus, GitHub Actions, and Docker, reducing production incidents by 25% and achieving 95%+ automated test coverage.

Citius Tech, India | Python Developer

Jan 2020 - Nov 2022

- Developed healthcare data processing applications using Python, Pandas, and NumPy to transform large volumes of HL7, FHIR, and EDI clinical data, improving accuracy and readiness for analytics workflows.
- Built scalable RESTful APIs with Django/Flask to enable secure interoperability between EHR systems and insurance platforms, improving API throughput by 35% through caching and query optimization.
- Implemented automated ETL pipelines for ingesting patient demographics, claims, and provider data from multiple sources, reducing manual data preparation efforts by 50% and improving data quality scores to 98%.
- Integrated FHIR and HL7 standards into Python-based workflows, ensuring HIPAA compliance and enabling seamless data exchange with payer systems.
- Refactored legacy Python codebases and optimized database queries, reducing end-to-end pipeline execution time by 40% and cutting infrastructure costs by 20%.
- Developed automated testing frameworks using PyTest with 90%+ code coverage, reducing production defects by 45% and improving release cycle confidence.
- Collaborated with DevOps teams to containerize Python applications using Docker and deploy on AWS (Lambda, S3, RDS) with CI/CD pipelines, enabling scalable, cloud-native operations.
- Created reusable Python utilities for schema validation, error handling, and data transformation, standardizing development practices across 4 product teams.

EDUCATION

Master's in Management - ITM and Business Analytics | St. Francis College, Brooklyn, New York

Bachelor's in Information Technology | GRIET, Hyderabad, India
