SUMMARY

Business Analyst with experience in data analysis, requirements gathering, process improvement, stakeholder collaboration, and business reporting. Skilled in translating business challenges into data-driven insights using SQL, Python, Excel, Power BI, Tableau, Power Query, and VBA. Experienced analyzing large multi-source datasets, documenting business logic, identifying inefficiencies, and delivering executive-ready summaries that support operational decisions and process improvements.

EDUCATION

Indiana University, Bloomington, Indiana, USA

May 2025

Master of Science in Data Science

University of Mumbai, Maharashtra, India

May 2023

Bachelor of Technology in Electronics and Telecommunications Engineering

TECHNICAL SKILLS

- **Business Analysis:** Requirements Gathering, Business Process Analysis, Process Improvement, Gap Analysis, Business Logic Documentation
- **Data Analysis & Reporting:** SQL, Python, Excel, Power BI, Tableau, KPI Reporting, Executive Reporting, Data Storytelling
- **Automation & Data Quality:** Power Query, VBA, Data Validation, Data Reconciliation, Reporting Automation, Root-Cause Analysis
- **Stakeholder Delivery:** Cross-Functional Collaboration, Stakeholder Communication, Documentation, Presentation Development, Decision Support

PROFESSIONAL EXPERIENCES

Electric Power Engineers, Allentown, Pennsylvania, USA

September 2025 – April 2026

Business Analyst

- Partnered with business and technical stakeholders to gather requirements, clarify business questions, document reporting logic, and deliver data-driven outputs aligned with operational decision-making needs.
- Analyzed large multi-source operational datasets to identify trends, inefficiencies, anomalies, process gaps, and opportunities for reporting or workflow improvement.
- Built Power BI and Excel dashboards, KPI summaries, and stakeholder-ready reports to communicate business performance, data quality findings, risks, and recommended actions.
- Automated validation and reconciliation workflows using SQL, Python, Excel, Power Query, XLOOKUP, VLOOKUP, and VBA, reducing manual review effort by 30–50%.
- Created business process documentation, issue logs, executive-style summaries, and root-cause analysis materials to support project reviews, decision-making, and process improvements.

Indiana University Kelley School of Business, Bloomington, Indiana, USA

May 2024 – September 2025

Data Analyst | Dr. Andrew Butters

- Analyzed longitudinal academic datasets using Python, Pandas, RegEx, SQL, Excel, and Qualtrics outputs, consolidating 10+ semesters of records to identify trends and decision-support insights.
- Processed and structured 2M+ multi-format research documents into relational datasets, improving data organization, quality control, searchability, and downstream reporting reliability.
- Developed reproducible preprocessing workflows, analytical summaries, data quality checks, and technical documentation to communicate assumptions, findings, and limitations to faculty stakeholders.

MyEdMaster LLC, Leesburg, Virginia, USA

May 2024 -August 2024

Data Science Intern

- Created SQL-based reports and dashboards to analyze user activity, product engagement, and platform behavior, helping stakeholders identify trends, usage patterns, and improvement opportunities.
- Cleaned, transformed, and analyzed product/user interaction datasets using SQL, Python, Excel, AWS RDS, and GCP-supported workflows to support reporting, feature evaluation, and data-driven recommendations.

PROJECTS

Human Reference Atlas (HRA) Portal Usage Dashboard Development - [link](#)

- Built a Power BI dashboard using 192K+ Google Analytics records, visualizing engagement KPIs, usage trends, and performance metrics to support stakeholder reporting and process improvement.

ECommerce Performance and Shipping Cost Analytics Dashboard in Tableau - [link](#)

- Designed interactive Tableau dashboards to analyze \$1.55M in eCommerce sales and predict shipping costs per SKU, uncovering SKU-level trends, regional performance, and logistics insights for data-driven marketing and supply chain decisions.

Forecasting Bank Term Deposit Acquisitions

- Built predictive models using Python, Scikit-learn, Random Forest, GridSearchCV, and SMOTE to identify customer subscription patterns, achieving 96% accuracy and supporting business decision-making through visualizations and statistical analysis.

CERTIFICATION

SAS Certified Specialist: Base Programming Using SAS 9.4 — SAS Institute
