

Summary

Dynamic and results-driven Full Stack Developer with over 3 years of experience in architecting and delivering scalable web applications and optimizing data processing systems. Proficient in cutting-edge technologies, including Java, Spring Boot, and ReactJS, with a robust understanding of AWS and cloud solutions. Demonstrated expertise in data analysis and machine learning, enabling the development of secure, high-performance applications that drive business success. Adept at leveraging innovative approaches to solve complex problems and enhance user experiences, while consistently delivering high-quality code and maintaining best practices in software development. A collaborative team player with a passion for continuous learning and a commitment to excellence in every project.

Skills

Programming Languages: Java, SQL, JavaScript
Web Technologies: HTML, CSS, JavaScript, Material, Bootstrap, Angular JS, React JS, Node JS
Back-End Technologies: Spring Framework, Hibernate
Cloud and DevOps: Amazon Web Services (AWS), Containerization, CI/CD, S3, HDFS, Kafka, Hive, RedShift, Spark, Apache Airflow
Visualization Skills: Tableau, Power BI, D3.js, Looker
Machine Learning: Sentiment Analysis, Data Modeling, Neural Networks, Classification, Clustering
Other Skills: Data Structures and Algorithms, Statistics, Spring Framework, Hibernate, Containerization and Orchestration, API Development, Postman, Building Data Pipelines, LangChain, Version Control, Technical Documentation, Agile Methodologies, Unit Testing, Cloud Technologies, Microservices Architecture

Education

Master of Science - Data Science University of Maryland - Baltimore County	May 2024 CPA 3.44
Bachelors in Electronics and Communication Engineering Anurag Group of Institutions - India	Aug 2021 CPA 3.66

Work Experience

Morgan Stanley – Full Stack Developer	Feb 2024 – Present
--	---------------------------

- As a Full Stack Java Developer, I have successfully contributed to the development and deployment of dynamic web applications, leveraging my skills in both front-end and back-end technologies.
- Key role in the development, deployment, and design of scalable online applications, guaranteeing the smooth interaction of the front-end and back-end parts. I used React.js to create responsive user interfaces with Java Spring Boot for back-end services.
- Used Java Spring Boot for back-end services and React.js for front-end interfaces, I helped design, build, and implement scalable online apps.
- RESTful APIs were created and integrated, guaranteeing effective data transfer between the client and the server and putting security measures in place to secure data.
- Database management involves creating and refining MySQL databases, running intricate queries, and guaranteeing data accuracy and speed.
- To produce high-quality software in a dynamic setting, team members worked together using Agile approaches and took part in sprint planning, daily stand-ups, and retrospectives.
- Consistently performed code reviews to ensure code quality and promoted productive teamwork by utilizing Git for version control.
- Applied responsive design concepts to improve user interfaces.

Tata Consultancy Services - Full Stack Developer - India	Jul 2021 – Jul 2022
---	----------------------------

- Spearheaded the design, development, and deployment of scalable web applications using Java Spring Boot for back-end services and Angular for front-end development, enhancing user engagement and functionality.
- Used Git for version control, facilitating productive teamwork and preserving code quality via consistent code reviews and observance of best practices.
- Oversaw API testing projects using Postman to find and fix serious vulnerabilities, which improved system performance for financial software solutions by 25% and the response time of the API.
- User Experience Enhancement: By putting responsive design ideas into practice and carrying out usability testing, user satisfaction and engagement increased significantly. This was achieved by creating intuitive user interfaces.
- Performance Optimization: Performed application performance tuning and optimization, leading to better load times and responsiveness, which improved the user experience all around.
- Constant Learning and Adaptation: Devoted to the advancement of professional skills through active participation in workshops and training sessions, keeping abreast of industry developments and the newest technological advancements.
- Advised and guided junior developers, encouraging a cooperative team atmosphere and knowledge exchange to boost team output.

Full Stack Java Developer - Sri Hanuman Traders - India	Feb 2020 – Dec 2020
--	----------------------------

- Managed and optimized MySQL databases, performing advanced queries and ensuring data integrity, which resulted in improved application performance and reliability.
- Utilized Git for version control, fostering effective collaboration among team members and maintaining code quality through regular code reviews and adherence to best practices.
- Devoted to personal and professional development; regularly participating in workshops and training sessions to hone skill sets; keeping up of emerging technology and market trends.
- Developed a collaborative team atmosphere by encouraging knowledge sharing and offering advice and mentoring to junior developers. This increased team output overall.
- Worked closely with clients to obtain requirements and provide specialized technological solutions that improved client satisfaction and ensured alignment with business goals.
- Collaborated with cloud architects to deploy applications on cloud platforms like AWS or Azure, leveraging scalable infrastructure and managed services to enhance application resilience and reduce operational overhead.
- Implemented security best practices, such as input validation, authentication, and authorization mechanisms, to protect applications from potential vulnerabilities and ensure data confidentiality.

Java Developer Intern - Cognizant Technology Solutions	India Jan 2021 – Jun 2021
---	----------------------------------

- Gained proficiency with Git version management, facilitating productive teamwork among developers.
- Improved analytical and problem-solving abilities thanks to practical code optimization and debugging expertise.
- Improved communication and teamwork abilities through tight collaboration with cross-functional teams made up of QA testers, product managers, and designers.
- Contributed to the creation and implementation of RESTful APIs based on Java Spring Boot, enabling seamless interchange between client-side and server-side applications.
- I developed and managed databases using MySQL, crafting complex SQL queries to retrieve and alter data while preserving data integrity and maximizing effectiveness.
- Participated in daily stand-up meetings, sprint planning, and retrospectives as part of Agile development procedures to support project planning and execution.
- Performed code inspections to ensure that coding standards and best practices were

Projects

Doctor-patient Portal

- The Doctor-Patient Portal project is designed to enhance the interaction between healthcare providers and patients through a digital platform. Below are detailed aspects of the project, including its features, modules, advantages, and disadvantages.
- To gain secure access to their medical records, patients must register on the site.
- Patients can look up doctors by name, location, and specialty.
- Users are able to see the available times and schedule appointments online for the time and day of their choice.
- Patients have access to and control over their medical history, which is kept safe in a database.
- Patients are able to comment on their interactions with physicians.
- Email confirmations are sent out following a successful appointment reservation.

- Patients can cancel appointments through the portal.
- The cost of appointments is automatically calculated by the system.

Fitness Tracking App

- The Fitness Tracking App project aims to provide users with tools and features to monitor their physical activities, nutrition, and overall health. Below are detailed aspects of the project, including its features, advantages, and challenges.
- Users can keep track of their workouts, examine their past results, and examine their performance over time to spot patterns and enhancements.
- Users can create customized fitness objectives and get alerts and prompts to help them stay on course.
- Using the app, users may keep track of their caloric intake, register their meals, and get personalized diet programs according to their fitness objectives.
- Users can use their mobile devices to track their nutrition and exercise at any time, anywhere.
- Customized exercise and nutrition regimens improve user efficacy and engagement.
- Users are encouraged to stick with their fitness objectives by social elements and gamification.
- Based on their tracked actions, users receive insightful feedback that helps them make well-informed decisions regarding their exercise regimens.

Celebrity Bot

- The Celebrity Bot project focuses on developing AI-driven chatbots that emulate the personalities of celebrities, allowing fans to interact with their idols in a personalized manner. Below are detailed aspects of the project, including its features, challenges, and recent developments.
- The chatbot mimics the distinctive voice, mannerisms, and tone of the celebrity, resulting in real-time conversations.
- Fans may interact with the chatbot whenever they want, getting prompt answers and feeling like they're still in touch with the star.
- Content Sharing: To increase fan interaction, the bot can provide personal tales, behind-the-scenes photos, and exclusive updates.
- By allowing users to pose questions and receive customized answers, the interaction becomes more intimate and significant.
- By connecting the chatbot to the celebrity's social media profiles, more fans can be engaged and communicated with.
- Users may be encouraged to engage with the bot more regularly by features like challenges and prizes.

Course

Full Stack Java Developer Program	FutureSkills Prime
Large Language Models and Generative AI	Coursera
Data Science with Python	Simplilearn
