SOFTWARE DEVELOPER AUTOMOTIVE | MANUFACTURING

Software Developer with experience in the automotive manufacturing industry, supporting global purchasing and supply chain activities. Brings strong analytical thinking skills.

CORE COMPETENCIES

Application Migrations | Dashboards | Data Tracking Improvement | Mainframes
Application Security Strategy | Database Management | Continuous Document Transfers

PROFESSIONAL EXPERIENCE

GENERAL MOTORS, Roswell, GA

January 2022 - Present

Software Developer, Global Purchasing and Supply Chain

Developed and optimized the Outbound Logistics Application using SQL, implementing table creation and trigger functions for automated activity logging, thus improving data tracking and operational efficiency.

- Utilized Java programming to enhance user experience, increase efficiency, and advance application capabilities.
- Strengthened application security by addressing vulnerabilities through a comprehensive strategy, including upgrading libraries and conducting performance tests for optimal integrity.
- Collaborated with the Mainframe department to integrate Connect Direct into server infrastructure, facilitating continuous document transfers from applications to the mainframe.
- Guided the successful migration of all applications from WebLogic to Tomcat, resulting in a 6% increase in company revenue.
- Innovated by creating a Dynatrace dashboard to monitor and track the performance of all applications across the organization, providing valuable insights for optimization and troubleshooting.
- Played a key role in developing a new application for the organization, utilizing Angular and TypeScript for the front-end and SQL for database management. Contributed to creating the backend with the use of REST APIs, ensuring seamless communication between the front-end and backend systems.
- Contributed to projects in an agile solution environment, ensuring adaptability and efficient delivery of software.
- Used Git to push and pull code to peer review colleagues code
