DATA ENGINEER

Contact no: 913-735-5911

Linkedin id: [linkedin.com/in/thrishul-k](https://www.linkedin.com/in/thrishul-k)

PROFESSIONAL SUMMARY

- **Experienced data engineer** with around **5 years** of hands-on expertise in designing, developing, and maintaining scalable data pipelines and infrastructure.
- Proficient in **leveraging various data engineering tools** to extract, transform, and load (ETL) large and complex data sets from diverse sources.
- Demonstrated expertise in **utilizing programming languages** such as **Python** and **Java** to manipulate and process data efficiently.
- Skilled in **designing and implementing** robust data storage and retrieval systems using **relational databases** (e.g., **MySQL**, **PostgreSQL**) and **NoSQL databases** (e.g., **MongoDB**, **Cassandra**).
- **Proficient in cloud-based technologies** and experienced in working with **AWS**, **Azure**, or **Google Cloud Platform (GCP)** to build and deploy data solutions.
- **Strong knowledge of data warehousing concepts** and experience in implementing **dimensional modeling** and **ETL frameworks** (e.g., **Kimball methodology**, **Apache Airflow**).
- Demonstrated proficiency in **stream processing** and real-time data integration using tools such as **Apache Kafka** and **Apache Spark**.
- Proven ability to **optimize and fine-tune** data pipelines for performance and scalability to handle large volumes of data.
- **Expertise in data quality assurance** and implementing **data validation** and **data cleansing** techniques to ensure accuracy and reliability of data.
- **Skilled in data visualization** using tools such as **Tableau** or **Power BI** to create insightful and interactive dashboards and reports.
- **Experience with distributed computing frameworks** such as **Hadoop** and **Apache Hive** for processing and analyzing big data.
- Strong understanding of **data security** and **privacy regulations** (e.g., **GDPR**, **HIPAA**) and experience in implementing appropriate data protection measures.
- **Effective problem solver** with a proven track record of identifying and resolving data-related issues and optimizing data processes for efficiency.
- **Excellent collaboration and communication skills**, with a demonstrated ability to work effectively with cross-functional teams and stakeholders.
- **Highly detail-oriented** with a strong emphasis on data accuracy, quality, and integrity.
- Proactive and **self-motivated**, with the ability to work independently and manage multiple projects concurrently.
- **Continuous learner** who stays updated with the latest advancements in data engineering and emerging technologies.
- **Strong analytical and problem-solving skills**, with the ability to analyze complex data sets and derive meaningful insights.
- **Proficient in SQL** for data manipulation and querying, with experience in writing optimized queries for performance.
- **Familiarity with data modeling** techniques and proficiency in **ER diagrams** and **schema design**.
- Experienced in **working with structured, semi-structured, and unstructured data formats** (e.g., **JSON**, **XML**, **CSV**).
- **Knowledge of containerization** technologies such as **Docker** and **Kubernetes** for deploying and managing data applications.
- **Experience with version control systems** (e.g., **Git**, **SVN**) and familiarity with **Agile** and **Scrum** methodologies.
- Proven ability to **troubleshoot and debug** complex data engineering issues and provide effective solutions.

- **Passionate about data engineering** and dedicated to leveraging data-driven insights to drive business growth and decision-making.

PROFESSIONAL EXPERIENCE

RESPONSIBILITIES

Client: CVS Health

Mar 2022 - Present

Role: Data Engineer

Responsibilities:-

- Involved in Big data requirement analysis, develop and design solutions for ETL and Business Intelligence platforms.
- Installed snowsql configured snowflake warehouse to establish connection from hash tags.
- Worked on reading multiple data formats on using python.
- Extensively used SQL Server Import and Export Data tool.
- Implemented Spark using Python (PySpark) and SparkSQL for faster testing and processing of data.
- Involved in converting SNOWSQL queries into transformations using python.
- Utilized Google Cloud Platform (**GCP**) to design and develop ETL and Business Intelligence solutions for big data requirements.
- Configured and managed a Snowflake data warehouse on **GCP** using SnowSQL and Python to establish connections with hashtags.
- Leveraged Python to read and process multiple data formats on **GCP**, enabling efficient data analysis and management.
- Utilized SQL Server Import and Export Data tool on **GCP** to transfer and transform data between different sources and destinations
- Implemented PySpark and SparkSQL on **GCP** for faster data processing and testing, improving overall efficiency and productivity.
- Converted SNOWSQL queries into transformations using Python on **GCP**, streamlining data workflows and enabling faster data analysis.

Environment: Airflow · Good Clinical Practice (**GCP**) · Google Big Query · Google Cloud Platform (**GCP**)

Client: Vanguard

Jun 2021 - Feb 2022

Role: Data Engineer

RESPONSIBILITIES

- Created Pipelines in ADF using Linked Services/Datasets/Pipeline to Extract, Transform, and load data from different sources like **Azure** SQL, Blob storage, **Azure** SQL Data warehouse, write-back tool, and backward.
- Extracted, Transformed and Loaded data from Sources Systems to **Azure** Data Storage services using a combination of **Azure** Data Factory, Spark SQL, and U-SQL **Azure** Data Lake Analytics.
- Data is Ingested to one or more **Azure** Services - (**Azure** Data Lake, **Azure** Storage, **Azure** SQL, **Azure** DW) and processing the data in In **Azure** Databricks.
- Worked on **Azure** Services like IaaS, PaaS and worked on storage like Blob (Page and Block), SQL **Azure**.
- Implemented OLAP multi-dimensional functionality using **Azure** SQL Data Warehouse.
- The data is retrieved using **Azure** SQL and **Azure** ML is used to build, test, and predict the data.
- Worked on Cloud databases such as **Azure** SQL Database, SQL managed instance, SQL Elastic pool on **Azure**, and SQL server.
- Responsible for estimating the cluster size, monitoring, and troubleshooting of the Spark data bricks cluster.
- Involved in Migrating Objects from Teradata to Snowflake and created Snow pipe for continuous data load.

- Increased consumption of solutions including **Azure** SQL Databases, **Azure** Cosmos DB, **Azure** SQL.
- Created continuous integration and continuous delivery (CI/CD) pipeline on **Azure** that helps to automate steps in the software delivery process.
- Deploying and managing applications in Datacenter, Virtual environment, and **Azure** platform as well.
- Utilized Matillion for data integration and ETL processes.
- Involved in converting Hive/SQL queries into Spark transformations using Spark RDD's and PySpark.
- Log data Stored in HBase DB is processed and analyzed and then imported into Hive warehouse, which enables end business analysts to write HQL queries.

Environment: **Azure** Data Factory(V2), **Azure** Data Bricks, **Azure** Data Lake, **Azure** BLOB Storage, **Azure** ML, **Azure** SQL, PySpark, Hive, Git, GitHub, JIRA, **Azure** Databricks • Microsoft **Azure**•**Azure** SQL

Client: FS Investments

FEB 2019 - May 2021

Role: Data Engineer

RESPONSIBILITIES

- Experience in Migrating on Prem Presto Queries to Hive on **AWS**.
- Converting Merlin Queries to Hive Queries
- Building Generic Framework on **AWS** Glue using python to orchestrate configurable Hive Queries with parameterization.
- Developed Python utilities to parse the configuration files and prepare the dependencies and configuration for the pipeline
- Developed Pyspark (Glue) jobs to perform custom transformation and execute queries as per the defined dependencies in configuration.
- Extracted schema form merlin tables and prepared DDL statements as per hive syntax.
- Analyzed the files using Athena.
- Build a generic process for backfilling the history data.
- Extensively used Git for version control and automatic deployments.
- Participated in all Agile ceremonies including sprint planning, refinement and sprint demo
- Experience in Migrating on Prem Presto Queries to Hive on **AWS**.
- Converting Merlin Queries to Hive Queries Building Generic Framework on **AWS** Glue using python to orchestrate configurable Hive Queries with parameterization.
- Developed Python utilities to parse the configuration files and prepare the dependencies and configuration for the pipeline Developed Pyspark (Glue) jobs to perform custom transformation and execute queries as per the defined dependencies in configuration.
- Extracted schema form Merlin tables and prepared DDL statements as per hive syntax. Analyzed the files using Athena.
- Build a generic process for backfilling the history data. Extensively used Git for version control and automatic deployments.
- Participated in all Agile ceremonies including sprint planning, refinement and sprint demo

Environment:**AWS** Cloud Formation • Amazon EC2 • Apache •**AWS** Glue • Amazon S3 • Amazon Web Services (**AWS**)

EDUCATION:

- B. COM COMPUTERS FROM KAKATIYA UNIVERSITY: MAY 2018-MAY 2021
- MASTERS : LEWIS UNIVERSITY: MAR 2022 – MAY2023
