Cary, NC | (919) 434-1902 | amu.murugan04@gmail.com | <https://www.linkedin.com/in/uma-murugan>
| <https://github.com/UMAMURUGAN26> | Authorized to work in the U.S. (L-2 Visa, I-94)

Professional Summary

Senior Java developer with 10+ years of experience delivering robust, scalable digital banking and insurance applications. Adept at Java, Spring Boot, microservices, RESTful APIs, and AWS cloud tools (EC2, S3, Lambda, RDS, VPC). Proven track record in optimizing workflows, improving performance, and leading high-performing teams. Skilled in containerization, CI/CD pipelines, and cloud-native development using Docker and AWS services such as EC2, S3, Lambda, RDS, and VPC. Strong communicator and collaborative problem-solver known for boosting delivery efficiency and reducing production defects.

Technical Skills

Operating Systems: Windows, Linux

AWS Services: EC2, S3, VPC, IAM, CloudWatch, ELB, Auto Scaling, RDS, Route 53, Lambda, DynamoDB, SNS, SQS, KMS, AWS CLI, Systems Manager, ECR, ECS, EKS, AWS API Gateway

Programming Languages: Java (8, 11), Core Java, Python

Java Technologies: Spring Boot, Spring MVC, Spring Core, Hibernate, JPA

Web Technologies: RESTful APIs, SOAP Web Services, JSON

BPM Frameworks: Activiti BPM, BPMN 2.0

DevOps & Tools: Maven, Git, Jenkins, Eclipse, Postman, SonarQube, JUnit, Rally

Database Management: MySQL, PostgreSQL, SQL, Oracle, DB2

Development Methodologies: Agile, Scrum, Waterfall

Education

Per Scholas | AWS re/Start Training | Cary, NC

October 2025

- Completed 15 weeks of intensive, full-time training in cloud computing fundamentals, AWS services, networking, and system operations. Gained 250+ hours of hands-on experience through labs and real-world scenarios using core AWS tools and programming languages.
- Capstone Project – Professional Development Coach (Interview Coach Proposal): Developed an AI-powered interview preparation platform to make professional coaching accessible and affordable for underserved job seekers.
 - Built backend services using AWS Lambda and API Gateway, with DynamoDB for data storage and S3 for hosting static content.
 - Implemented Amazon Polly for realistic voice feedback and Amazon Transcribe to convert interview responses to text.
 - Deployed the front-end using AWS Amplify and managed user authentication with Cognito.
 - Monitored application performance using CloudWatch, enabling scalability and reliability improvements.

Bachelor of Technology (B.Tech) in Information Technology

Kalasalingam University, Tamil Nadu, India

May 2013

Certificate

- | | |
|---|--------------|
| • AWS Certified Cloud Practitioner (CCP) | October 2025 |
| • AWS Cloud Practitioner Essentials | August 2025 |
| • HackerRank certifications: Java (Basic) and REST API (Intermediate) | May 2025 |
| • Oracle Certified Professional, JAVA SE 6 Programmer | June 2013 |

Professional Experiences

Technical Lead | Tata Consultancy Services | Bangalore, India

June 2019 – July 2024

- Led a high-performing development team, driving the creation of web applications leveraging Java, Spring Boot, and microservices architecture, resulting in a 30% increase in system efficiency

- Collaborated with cross-functional teams to refine CI/CD processes, reducing post-deployment defects by 20% and ensuring consistent code quality through continuous integration pipelines
- Mentored five junior developers, improved their coding practices, and boosted team productivity by 30% by guiding them in best practices, efficient coding techniques, and problem-solving strategies
- Supported recruitment efforts by participating in technical interviews, evaluating candidates, and onboarding new team members with mentorship and training

Developer | Tata Consultancy Services | Bangalore, India

December 2013 – May 2019

- Engaged in agile development practices, including daily stand-ups, sprint planning, and retrospectives, contributing to the timely delivery of user stories and sprint goals
- Assisted in migrating certain components from legacy Java servlets/Struts to Spring MVC, following clean code best practices, ensuring maintainability and scalability
- Teamed up with QA teams to write unit and integration tests using JUnit, reducing production defects by 25% and ensuring high-quality releases for critical insurance functionalities

Projects

Project Name: Digital Banking

June 2019 – July 2024

Client: Continental Bank

- Streamlined identity verification and onboarding workflows using Activiti BPM, which led to a 20% decrease in account opening time.
- Integrated NSDL APIs for real-time PAN card validation and verification, reducing manual checks, improving operational efficiency by 25%
- Containerized applications using Docker and deployed them using Amazon ECS (Elastic Container Service)

Client: Peoples State Bank

- Spearheaded the migration of the banking application from a monolithic architecture to microservices, ensured scalability, flexibility, and continuous availability, and increased deployment frequency by 30%
- Authored and maintained comprehensive technical documentation, supported ongoing development, troubleshooting, and seamless knowledge transfer to other team members.
- Managed the use of Amazon S3 for securely storing financial data such as transaction logs, documents, and uploaded customer files, ensuring data redundancy and compliance with data retention policies

Client: Bahrain Development Bank

- Designed and developed highly scalable and secure payment gateway solutions to ensure uninterrupted transactions and contributed to a 40% improvement in application performance.
- Identified and resolved critical production issues, performing root cause analysis to identify recurring problems, improved system stability, and reduced recurring incidents by 40%

Project: NIA (New India Assurance)

June 2015 - May 2019

- Optimized database interactions by implementing efficient Hibernate queries and caching strategies, resulting in a 30% reduction in query execution time and improved application responsiveness
- Improved security compliance by conducting regular code reviews and using SonarQube for quality assurance and vulnerability scanning, and reduced security issues by 35%

Project: GE (GE Real Estate)

December 2013 -May 2015

- Participated in sprint demos, presenting user stories to stakeholders and incorporating feedback into subsequent iterations
- Implemented efficient SQL queries and database-level rules to automate data validation processes, reducing manual errors by 40% and improving data consistency
