

Upender Reddy Bokka

Full stack Java Developer

Over 5 years of dedicated and efficient Java full stack developer experience. To build a progressive career in the IT sector by using my inner strengths, professional skills, and creative thinking to gain future exposure and experiences, where the skills acquired by me, will enable me to learn new things and work with a team of high-caliber professionals.

☎ +14752018686 ✉ upenderreddy1308@gmail.com in www.linkedin.com/in/upender-reddy-bokka-a652a8273

PROFESSIONAL SUMMARY:

- **5 Years** of experience in developing enterprise applications in different domains like Finance, Health, E- Commerce and other related domains. Good in analyzing, designing and coding technical solutions using **Java/J2EE** technologies to satisfy business requirements.
- Extensive experience in **Java/J2EE technologies** including **Servlets, JSP custom tags, Struts, Spring Framework, Spring Boot, Hibernate, EJBs, Java Beans, JDBC, and JMS**. Proficient in designing and deploying **microservices-based architectures** for both **cloud** and **on-premises environments** using **Spring Boot** and **Spring IO**. Adept at leveraging serverless computing with **AWS Lambda** to improve scalability and operational efficiency.
- Skilled in building responsive and dynamic user interfaces using **React, Redux, Angular, TypeScript, HTML5, CSS3, JavaScript, Ajax, jQuery, and ECMAScript**. Strong understanding of state management concepts such as **State Store, Action Creator, Reducer, and Container**. Proficient in **SPA (Single Page Application)** development, ensuring seamless user experiences.
- Developed and deployed **large-scale web applications** with **React and Redux**, optimizing **backend API integration** and **state management** for complex data handling and scalability. Experienced in using **Figma** to create wireframes, mockups, and interactive prototypes, optimizing collaboration between design and development teams.
- Proficient in creating **event-driven data pipelines** using **Apache Kafka, Apache Storm, and Spark** to handle streaming and batch data processing. Skilled in integrating structured and unstructured data from **RDBMS** and external sources.
- Expertise in **unit and integration testing** using frameworks like **Mockito, JUnit, Jest, and React Testing Library** to ensure robust and reliable code. Skilled in diagnosing and resolving complex front-end performance issues using **React DevTools** and **Chrome DevTools**.
- Strong experience with **Oracle, MySQL, PostgreSQL, and MongoDB**, including advanced performance optimization through **Query Optimizer, Execution Plans, and Indexes**.
- Designed and automated CI/CD pipelines using Jenkins, Docker, and Kubernetes to enable rapid, reliable deployment cycles for scalable microservices, automating deployments and ensuring smooth delivery cycles. Successfully implemented **zero-downtime deployments** using Kubernetes orchestration.
- Proficient in **Git, GitHub, SVN, and CVS** for version control. Skilled in using IDEs such as **Eclipse, Spring Tool Suite, and IntelliJ IDEA**.
- Extensive experience working in **Agile and Scrum environments**, actively contributing to sprint planning, retrospectives, and incremental feature delivery.
- Demonstrated expertise in analyzing, refactoring, and modernizing legacy monolithic applications into modular, scalable microservices-based systems, ensuring maintainability and future scalability.
- Skilled in developing **SOAP and RESTful APIs** using **Spring MVC** and implementing robust security protocols using **OAuth 2.0**. Experience with **XML, XML-RPC, JAX-RPC, JAXB, Unix Korn Shell Scripting, and JSF**. Adept at working with J2EE application servers such as **Apache Tomcat, WebLogic, and IBM WebSphere**.
- Adapted engineering principles to develop scalable, data-driven applications in highly regulated domains, ensuring compliance with industry standards.
- Leveraged Linux environments for deploying, managing, and troubleshooting distributed applications.
- Provided mentorship to junior developers on best practices, code reviews, and troubleshooting complex issues.
- Utilized Azure DevOps for continuous integration, deployment pipelines, and managing pull requests.
- Spearheaded the transformation of legacy monolithic applications into a microservices-based architecture, increasing system scalability and reducing downtime.

EDUCATION:

Masters in computer science from University of Central Missouri, USA.

TECHNICAL SKILLS:

- **Programming Languages:** Java, Groovy, SQL, JavaScript, HTML, C/C++/C#, Python, HTML5, CSS, Node.js, ReactJS
- **Java Frameworks:** Spring Framework, Elastic search, Spring Data JPA, Spring JDBC, Hibernate, Spring Rest Doc, Spring Security, Log4J, Apache Camel

- **Web Services:** SOAP, RESTful, WSDLScripts: HTML5, CSS3, XML, XSL, SOAP, WSDL, Java Scripts, CSS, Bootstrap, and jQuery, Typescript.
- **AWS Skills:** Chime, Agora, SQS, S3
- **Unit Testing:** Junit, Mockito, Spock
- **RDBMS:** MySQL, PostgreSQL, MongoDB, Oracle, My SQL Server
- **Build/Configuration Management Tools:** Ant, Maven, Gradle, Docker, Docker Compose, Jenkins, and Kubernetes
- **Web Server:** Apache Tomcat, JBoss, WebSphere, and Web Logic
- **Version Control:** GitHub, Git
- **Development methodology:** Agile, Waterfall
- **Other Tools:** Jira, Confluence, Jenkins, New Relic, Kibana, MuleSoft, Anypoint Studio

PROFESSIONAL EXPERIENCE

Client: MetLife, Cary, North Carolina, USA

Jan 2024 – Present

Role: Java Full Stack Developer

Description: MetLife, Inc. is the holding corporation for the Metropolitan Life Insurance Company. I design and implement scalable, secure, and high-performance applications by utilizing Java and other technologies to develop both front-end and back-end components of MetLife's web applications.

Responsibilities:

- Involved in developing functions for Amazon Lambda to manage some of the AWS services.
- Developed **Hibernate** configuration files and queries and Implemented **DAO classes**.
- Expertise in design and development of various web and enterprise applications using Type safe technologies like **Scala, Akka**.
- Developed and exposed scalable RESTful services using JAX-RS, designed to process real-time data and provide actionable analytics through clean APIs, created and read the **JSON** objects by using **JACKSON** libraries.
- Strong Hands-on experience with **IBM MQ Series, Active MQ, Kafka** and **JMS** for communication between middleware components.
- Strong development skills in designing and developing **Microservices** along with **Spring Boot** and Coherence cache implementation.
- Started as a monolithic application that runs on **JBoss**, later migrated it into a set of spring boot and **Node.JS Microservices**.
- Used various **jQuery** and **Bootstrap** plug-in like **date picker, Bootstrap** selectors.
- Implemented Product-Retrieval Service as **SOAP** based service using **Apache frame works**.
- Involved in **JUnit** testing, **JSON** parser & maintaining data accuracy.
- Design and maintain **Spring boot microservices** for large-scale enterprise applications.
- Implemented a continuous delivery pipeline with **Docker** for custom application images in the cloud using **Jenkins**.
- Involvement in building spring batch to maintain the several jobs on **ETL data**. Involved in using **ISO Messaging standards**.
- Used **Java1.8** Method references feature to point to methods by their names and used functional Interfaces.
- Worked on project to retrieve log messages procured from **Kafka** by leveraging **Spark Streaming**.
- Developed a controller **Servlet** that dispatches request to appropriate **Action Classes**.
- Implementing **keyspaces**, tables, and indexes in **Cassandra** database to suit application needs.
- Extensive experience in data ingestion technologies like **Kafka, flume** and **Sqoop**.
- Used **React** as framework to create a Single Page Application (**SPA**) which can bind data to specific views and data with server.
- Deployed applications into Continuous integration environments like **Jenkins** to integrate and deploy code on **CI/CD** environments for development testing.
- Designed and implemented event-driven architectures using **Kafka** and **JMS**, enabling real-time data streaming and processing.
- Implemented authentication and authorization for the application using **Spring Security** and **Oauth2**.
- Develop various screens for the front end using **React** and used various predefined components from **NPM (Node Package Manager)** and **Redux library**.
- Deployed our application on Pivotal Cloud Foundry (**PCF**) which is used to reduce the development overhead by providing a ready to use platform.
- Experience in building pipelines using build/deploy tools such as **Jenkins, Docker** and **OpenShift** for Continuous Integration & Deployment for **Microservices**.
- Strong Database design and development experience, which includes developing Stored Procedures, functions using **SQL** and **PL/SQL** in **MS-SQL, Oracle, DB2, PostgreSQL** databases Along with experience in Data, Multithreading and have worked on search techniques and algorithms.

Environment: AWS, Cassandra, CI/CD, DB2, Docker, Hibernate, Java, Java 8, Jenkins, Kafka, Microservices, Oracle, PCF, PL/SQL, PostgreSQL, React, Redux, Scala, Spring, Spring Boot, Spring Security, SQL

Client: Atrium Health, St Louis, Missouri, USA

Jun 2023 - Dec 2023

Role: Java Full Stack Developer

Description: Atrium Health is a nonprofit health system that offers a wide range of healthcare services. I worked on the entire stack, including the database, server, API, and client-side applications. Developed and maintained microservices, ensuring they are scalable, resilient, and performant.

Responsibilities:

- Hands on experience on **Azure VPN-Point to Site, Virtual networks, Azure Custom security, end point security** and firewall.
- Worked on UI for Layered Security and S&L modules and hands on experience with **Spark** streaming to receive real time data using **Kafka**.
- Used **MS360 Framework** to extract the Json file for **Microservices**.
- Worked on project to retrieve log messages procured from **Kafka** by leveraging **Spark** Streaming.
- Implemented configured **Jira** issue tracking software with **Agile** plug-in across all the company functions.
- Setting up continuous integration and continuous deployment (**CI/CD**) pipelines with **Jenkins**.
- Involved in web services design and development. Responsible for creating and consuming web services using **REST** and **XML**.
- Extensively worked on developing UI components using **JavaScript** and **JSON** to interact with **RESTful** web services.
- Worked in integrating **JMS** with **SPRING BOOT** by providing an instance which is embedded with **Active MQ**.
- Implemented **Microservices** into existing system architecture. Developed **Microservices** business components and **RESTful** service endpoints using **Spring Boot**.
- Used Client side **MVC** frameworks like **Angular JS Single Page Application** developments.
- Implemented asynchronous messaging services using **JMS**.
- Implemented Web-Services to integrate between different applications internal and third-party components using **SOAP** and **REST** services using **Axis2, Kubernetes**.
- Created and maintained reproducible development and regression testing environments using containerized solutions with **Docker** and **Kubernetes**.
- Created **UNIX shell scripts** to run the Informatica workflows and controlling the **ETL flow**.
- Used **Java 8** Features Like **lambda expressions** for communicating between business layers and database, stream **API** for Bulk Data Operations on Collections using both streams and parallel streams.
- Experience in Container management using **Docker** by writing **Docker** files and set up the automated build on **Docker HUB** and installing and configuring **Kubernetes**.
- Used **JDBC** in order to establish and maintain connection with the **MySQL** database from the **Java Spring Data** Layer.

Environment: Agile, Angular, Azure, CI/CD, Docker, Java, Java 8, JDBC, Jenkins, Jira, JMS, Kafka, Kubernetes, Microservices, MVC, MySQL, RESTful, S3, Spark, Spring, Spring Boot, Spring Data, SQL, XML

Client:(Compass Group USA) Apisero, Hyderabad, India

Sept 2020 - Jan 2023

Role: Software Engineer

Description: Compass Group USA is the leading provider of food and support services in the U.S., serving a wide range of sectors including education, healthcare, business, and entertainment. I created the RESTful services and APIs that are consumed by other services or front-end applications.

Responsibilities:

- Implemented REST Microservices using Spring Boot and integrated them with MuleSoft for seamless data transformation and API management.
- Used Node.js, React, and MuleSoft Anypoint Platform to develop and connect Single Page Applications (SPA) to backend services.
- Designed web applications in Java and HTML5/JavaScript, and integrated MuleSoft for external system integrations.
- Deployed microservices in MuleSoft CloudHub, utilizing PCF for scaling and monitoring.
- Extensive experience in developing **Microservices** using **Spring** frameworks and followed domain driven design.
- Created **JUnit** test cases to automate the testing of business logic.
- Created **TypeScript** reusable components and services to consume **RESTAPI's** using Component-based architecture provided by **ReactJS**.
- Maintain Interface compatibility and concurrency in the project using **Java 8** new features like default, static methods, and **Concurrency API**.
- Converted a monolithic app to **Microservices** architecture using **Spring Boot** using 12-factor app methodology. Deployed, Scaled, Configured, wrote manifest file for various **Microservices** in **PCF**.
- Developed **JASPER** report to show the result after validations are performed on the test cases and maintaining several data accuracy.

- Integration of **Spring** Batch & validation service in the UI & in **JBoss** & **APACHE Tomcat** servers as well.
- Worked with **NoSQL** databases such as **Cassandra**, **MongoDB**, and **Risk**.
- Created **UNIX shell scripts** to run the Informatica workflows and controlling the **ETL flow**.
- Worked on integration of **AWS** Cloud configuration management and Centralized logging using **Spring Boot** and **Java** application.
- **OAuth 2.0** authentication framework is used to provide security to **RESTful** web services by generating access tokens in order to access protected resources.

Environment: AOP, AWS, Cassandra, Eclipse, HTML, Java 8, JavaScript, JUnit, Microservices, Anypoint studio, MongoDB, MVC, Node.js, NoSQL, OAuth, PCF, React, RESTful, Spring, Spring Boot, SQL

Client: Meesho, Bangalore, India

Aug 2019 - Aug 2020

Role: Java Developer

Description: Meesho is an online shopping & Reselling site in India. Worked on continuous integration/continuous deployment (CI/CD) processes to ensure smooth and automated deployment of code to production. Developed the scalable and high-performance web applications using Java for the backend.

Responsibilities:

- Designed and maintained Spring Boot Microservices and developed REST APIs using Spring MVC, hosted on platforms like Pivotal Cloud Foundry (PCF) for enterprise applications.
- **Hibernate** as an **ORM tool** for OR mappings and configured **hibernate.cfg.xml** and **hibernate.hbm.xml** files to create the connection pool.
- Design and maintain **Spring Boot Microservices** for large-scale enterprise applications.
- Modified existing **Shell scripts** in **Unix** to call daily sub routines.
- Involved in designing, capacity planning and implementing multi-rack **Cassandra** cluster.
- For version control management used **CVS** software.
- Used Subversion for configuration Management and **Jira** for task management and bug tracking.
- Developed the **REST Microservices** using **Java JDK 1.8**, **Scala**, on **IntelliJ** platform by gathering the knowledge of previous phase resources and integration with **Oracle**.
- Worked on both **JBoss** application server to implement the web application.
- Developed **REST API's** using **Spring MVC** and **Spring Boot**, hosted all **micro services** on **PCF**.
- Involved in Unit testing using **JUnit** and Mockito.
- Experience working in **Agile** development following **SCRUM** process, Sprint, and daily stand-up meetings.
- Used **JMS (Java Messaging Service) API** and **Kafka** to mail notifications upon the success or failure when the backend processes are completed and to send mail notifications regarding any system related problems.
- Developed automation of Validation service to provide the **JASPER** report based on bean validations, **Spring** validations on test cases.
- Used various **jQuery** and **Bootstrap** plug-in like date picker, **Bootstrap selectors**.
- Expertise in coding optimized **SQL** queries on databases like **Oracle**.
- Build **REST** web service by building **Node.js Server** in the back end to handle requests sent from the front-end **jQuery Ajax** calls.
- Implemented **J2EE** components using **Spring MVC**, **Spring IOC**, **Spring Transactions** and **Spring Security** modules.

Environment: Agile, Bootstrap, Cassandra, CVS, Hibernate, IntelliJ, J2EE, Java, Jira, JMS, jQuery, JUnit, Kafka, Microservices, MVC, Node.js, Oracle, PCF, Scala, Spring, Spring Boot, Spring IOC, Spring MVC, Spring Security, SQL

CERTIFICATIONS:

- AWS Certified Solutions Architect – Associate
- MuleSoft Level 1

KEY PROJECT HIGHLIGHTS:

Event-Driven Architecture with Kafka

- Designed an event-driven architecture for handling real-time streaming data, integrating Kafka and Hadoop with microservices for high-throughput messaging.

Cloud-Native Application Development

- Developed a cloud-native application deployed on AWS, leveraging Lambda for serverless computing and S3 for storage.

Automation of CI/CD Pipelines

- Implemented CI/CD pipelines with Jenkins and Docker to automate build, test, and deploy processes, reducing deployment times by 30%.
