

Vedasri

Email ID: vedasri303020@gmail.com

Phone No: (913) 228-2617

PROFESSIONAL SUMMARY:

- **About 4+ years of experience** in designing, developing, and deploying applications using **Java 8/10/12/14**, technologies including **Spring, Spring Boot, Spring MVC, JSF, JMS, AJAX, XML, JDBC, JNDI, Java Beans Hibernate** and **Web Services**.
- Expertise in Client Scripting language and server-side scripting languages like **HTML5, CSS3, JavaScript with ECMA6 features, TypeScript, JQuery, JSON, Bootstrap, Angular 8/10/12/14, React JS, Express.js, Vue.js, Ext.js, Backbone.js, Node.js**.
- Experience in developing **Core Java SE 8/9/10/11** concepts like **Streams API, Time API**, Functional Interfaces, Multithreading, Transaction Management, Exception Handling, and Lambda functions, Generics and Collection **API**.
- Proficient in XML technologies like **XSL/XSLT, SOAP, REST, WSDL, DTD, XSD, XMI, SOA, JAXB, JAXP, HTML5/DHTML, XHTML, JavaScript, JQuery, JSON, CSS3**.
- Experience in all phases of **Software Development Life Cycle (SDLC)**, which includes User Interaction, Business Analysis/Modeling, Design/Architecture, Development, Implementation, Integration, Documentation, Testing, and Deployment.
- **Developed and maintained front-end applications** using **Node.js**, ensuring efficient and high-performance user interfaces.
- **Good experience in working with core java concepts** like **OOPS, Multi - threading, Exception handling, Generics, Collection, Networking** etc.
- Good experience in **spring** modules like **Spring AOP, DAD** and Implementing Spring aspects for logging cross cutting concern.
- Experience in developing web based J2EE applications using **Struts/Spring frameworks**. **Experience in Spring Framework** such as **Spring WEB, Spring IOC, Spring AOP and Spring Boot**.
- Experience using persistence framework like **Hibernate/JPA** for mapping Java classes with database and using **Hibernate Query Language (HQL)**.
- Good knowledge on working with Relational database **ORM frameworks** like **PostgreSQL, MySQL, DB2, Oracle 12c/9i**, and **NoSQL DB (Mongo DB and Cassandra, Couch DB, Redis, Dynamo DB)**.
- **Integrated RESTful APIs** with front-end applications to ensure seamless data flow between server and client.
- Good experience on working with **Amazon Web Services** like **EC2, S3, Amazon Simple DB, Amazon RDS, Amazon Elastic Load Balancing, Docker, JMS, Amazon SQS, AWS Identity and access management, AWS Cloud Watch, Amazon EBS and Amazon Cloud Front**.
- Built enterprise-wide DNS historical data trending analysis tools in **Go (GoLang)**, Languages with **REST API** for user queries as **Microservices**.
- Proficient on DevOps essential tools like **Chef, Puppet, Ansible, Docker, Kubernetes, Subversion (SVN), GIT, Hudson, Jenkins**.
- Expertise to interact with relational databases using **ORM frameworks** like **Hibernate, spring**. **Experience of Jenkins, Apache Ant, Apache Tomcat, Subversion, Git, GitHub, Maven, Bitbucket**.
- Experience with development using **Angular** extensive features for loading views in a Single Page Application, **MVC** structure for **JavaScript** files, data-binding using **Angular** directives and building custom directives.
- Extensive expertise in **Unit Testing** using **JUNIT Test Cases** and **Automated Functional Testing** tools like **Selenium, Debugging** tools like **Log4j** used **Mockito** for **Stubbing**.

- Complete understanding of the **DevOps** process with continuous integration using **Jenkins, JIRA, GIT, and CHEF**.
- Proficiency with the application servers like **IBM Web Sphere, Web Logic, JBOSS** and **Tomcat**.
- Experiences in using build tools like **Maven** and **ANT** for build and deployment of applications.
- Expert in developing and debugging applications using **Eclipse IDE** and **IntelliJ** and good knowledge with **SVN, CVN and Git version control**.
- Experience in Integrating **Apache Kafka** with and created **Kafka pipelines** for real time processing.
- Experience in web services technologies like **REST, SOAP, WSDL, JMS** and **Service Oriented Architecture (SOA)**.
- Experience in bash and **Python scripting** with focus on **DevOps** tools, **CI/CD** and AWS Cloud Architecture on **REST, Microservices** using **Spring Boot** for the customers to consume data.
- Extensive experience in testing on multiple operating systems including **Linux, UNIX,** and **Windows**.
- Special concentration in **Ruby language** and **Ruby on Rails** application framework.
Extensive experience in developing messaging module by using **Apache Camel**.

TECHNICAL SKILLS:

Languages	C, C++, Java /8/9/10/12/14, J2EE, Python, JavaScript, SQL, PL/SQL.
Java/J2ee Technologies	Servlets, JSP, JSTL, JDBC, JSF, MVC, XML, JAXP, DOM, JNDI, Web services
Web Technologies	HTML5, DHTML, XML, XSLT, CSS3, Bootstrap, Ajax, JSON, SOAP, Redux, JavaScript, Angular JS, Node JS, and React JS.
JavaScript API's	JavaScript, JQuery, Bootstrap, Ajax, JSON, Angular 14/12/10/8/, Angular CLI, Angular Material, Vue.js, React JS, Type script.
Frameworks	Struts, Spring, Spring-Data, Spring Boot, Spring JDBC, Spring MVC, Hibernate, Spring Core, Spring ORM Spring AOP.
Web/Application Servers	Apache Tomcat, Web Logic, Web Sphere, Apache Camel, Kafka, JBOSS.
Cloud Computing	AWS, Azure, GCP.
Version Control Systems	GIT, GITLAB, Bitbucket, SVN, CVS, Apache Ant.
Database	Oracle, DB2, MySQL 5.0, MS Access, SQL server & MongoDB, Casandra.
Build and Log tools	Maven, Gradle, ANT, Logging tool, Docker, Kubernetes.
Testing	JUnit, SoapUI, Postman, Selenium, TEST NG.
Operating Systems	Windows, Unix, Linux, Mac.

PROFESSIONAL EXPERIENCE:

Client: City National Bank, Reston, VA
Duration: July 2023 – Present
Role: Java full stack developer
Responsibilities:

- Involved in System Analysis, Design and development using OOAD methodology to capture and model business requirements.

- Used Java features like lambda expressions for communicating between business layer and database, stream API for Bulk Data Operations on Collections using both streams and parallel streams.
- Responsible for developing java components using spring, Spring JDBC, Spring Transaction Management.
- Designed the front-end screens using HTML5, CSS3, JavaScript, JQuery, Bootstrap and Spring Boot.
- Created and Implemented Microservices or REST APIS using spring boot, REST, JSON.
- Designed and developed SOAP Web Services Client program to consume existing SOAP web service using Axis framework.
- Worked with Responsive Web design using Bootstrap.js and Created Angular 12/14 custom pipes to format the data before displaying it to the user.
- Tested SOAP web services using SOAP UI and REST services using POSTMAN.
- Responsible for creating efficient design and developed User Interaction screens using HTML5, CSS3, JavaScript, JQuery AJAX, and JSON.
- Implemented classes, interfaces and methods, constructors and objects definitions using TypeScript.
- Created and compiled XML Schema to generate Java Bean classes.
- Developed Project Specific Java API's for the new requirements with the Effective usage of Data Structures, Algorithms, and Core Java, OOPS concepts.
- Used Maven for compilation, packaging and deployment in the Apache Tomcat and Web Sphere Application servers.
- Extensively worked on TOAD for interacting with database, developing the stored procedures, and promoting SQL changes to QA and Production Environments. Write and execute scripts in Selenium Web driver.
- Created Typescript reusable components and services to consume REST API's using Component-based architecture provided by Angular 12.
- Developed Batch process framework using executive service framework to cascade multiple changes on multiple records in only one transaction.
- Collaborated with front-end developers to integrate Node.js back-end services with React.js and Angular applications.
- Designed Hibernate configuration file in ORM model which automate the mapping between the SQL databases and objects in java.
- Design and develop application with backend programming languages Java/J2EE, spring boot, front end with JavaScript and advance JavaScript frameworks and libraries such as ReactJS, NodeJS, Redux, Axios, npm.
- Deployed Spring Boot based Micro-Services in Docker container by using AWS admin console Built cloud formation stacks utilizing JSON templates to deploy micro services as part of Jenkins.
- Involved in writing Maven scripts for automated deployment of the application and managed GitHub Projects and migrated from SVN to GitHub with merge and version and used Jenkins for continuous integration.
- Have extensive knowledge in modelling data, indexing, and performance tuning MongoDB queries as well as hands on experience writing queries.
- Developed Spring Boot Microservices with Microservices architecture using REST & Apache Kafka.
- Manipulated data using CRUD operations of MySQL database management system and handled database access and data transmission based on Restful web service.
- Complete understanding of the DevOps process with continuous integration using Jenkins, JIRA, and GIT.
- Worked with Spark Python API (PySpark) to write Spark programs to analyse and process real-time data and place the processed data on the Hadoop Distributed File System (HDFS).

- Installed and configured Jenkins Continuous Integration server with management of plugins and utilized several CI/CD plugins like build pipeline, Docker, GIT, JUnit.
- This is a configuration widget written in CSS3, Java Script, and JQuery framework in UI Layer with Tag library, application deployed and tested on Linux.
- Written unit test cases using JUnit and Integration test cases and integrated with Jenkins jobs.

Environment: Java, J2EE, JavaScript, Spring, Hibernate, Struts, Servlet, JDBC, JQuery, AJAX, Eclipse, JSP, JSTL, JIRA, JSON, WebLogic, SQL, Unix, Redux, Apache, Angular 12/14, Vue.js, React JS, AWS, MongoDB, GIT, GitHub, Windows.

Client: Frost Bank, San Antonio, TX

Duration: March 2022 – June 2023

Role: Full stack Java Developer

Responsibilities:

- Involved in various phases of Software Development Life Cycle (SDLC) of the application like Requirement gathering, Design, Analysis and Code development.
- Following Agile Methodology and interact with various stake holders in gathering requirements and business artifacts in the areas of gathering, design, coding, and documentation.
- Developed middle-tier application with J2EE using Servlet, EJB, Java Beans and Web Services Standards (Soap, WSDL, UDDI).
- Developed Web Pages by using HTML5, CSS3, JQuery, JavaScript and using JavaScript frameworks such as Ext.js, Angular 9/10 and Bootstrap.
- Developed User Interface screens for various modules like Action, Risk, Lessons learned, and MOM items using JSF, JavaScript, and AJAX using Eclipse.
- Designed UML Use case diagrams, Class diagrams, and Sequence diagrams using Rational Rose.
- Extensively used Maven to build the application and deploy on Embedded Tomcat Server.
- Extensively used the Hibernate Query Language (HQL) for data retrieval from the database and process the data in the business methods.
- Apache Maven tool has been used for the build and deploy the application. Monitored the Error logs using Log4J and fixed the problems.
- Experience working on CD/CI pipelines for web applications and hosting them on cloud AWS, using Jenkins, Shell scripting.
- Connected to Linux servers to view application logs to trouble shoot application issues using putty as an interface.
- Design and development of many PL/SQL batches using Java with connectivity to Oracle for data maintenance and handling.
- Designed dynamic client-side JavaScript codes to build web forms and simulate process for a web application, page navigation and form validation using Angular 8.
- Involved in setting up Test automation and developed cucumber feature files and used Selenium for automated testing with TestNG.
- Implemented real-time data features using WebSockets and Socket.io in Node.js to enhance user interactivity and experience in Java applications.
- Used Kafka functionalities like distribution, partition, replicated commit log service for messaging systems by maintaining feeds.
- Software developer for various enhancements to risk data adhering to regulatory functions and compliances using core Java concepts, UNIX and Oracle 11g. This application interacts with several back end systems to effectively collect the raw data from various sources.
- Used Go Programming Language (GoLang) and Scala in the development of the application.

- Created Typescript reusable components and services to consume REST API's using Component based architecture provided by angular.
- Designed and built reliable, highly scalable, Agile, and flexible systems using MongoDB as Database. Stored the data in the form of JSON structure-based documents, stored in a collection using MongoDB.
- Worked on save search module using Angular, Used RESTFUL web services using Angular HTTP Module and transformed the response using RxJs observables.
- Design, develop and test HTML, CSS, JQuery, React JS, that meets accessibility of web browser Used spring framework for implementing Dependency Injection, Spring ORM.
- Experience with container-based deployments using Docker, working with Docker images, Docker-registries and Kubernetes.
- Involved in Unit testing of application using JUnit and built the package using Maven and deployed the application on to WebLogic App Server.
- Used Java Mailing or Messaging Service (JMS) API's for mailing detailed notifications depending upon the success and failure once the backend process is complete and for mailing administrator of any system related problems.
- Performed a thorough unit testing and resolved several data related issues before migration to production.

Environment: Ava, J2EE, JavaScript, React JS, Spring, Hibernate, Struts, Servlet, JSF, JDBC, Web Services, DOJO, CSS3, AJAX, HTML5, JSP, JSTL, JSON, Eclipse, Angular 8/11, React JS, Apache Tomcat, WebSphere, AWS, SQL, MongoDB, GIT, GitHub, Windows.

Client: Capgemini, Bengaluru, India

Duration: Sep 2020 to Dec 2021

Role: Software Developer

Responsibilities:

- Responsible for system analysis, design, and development in JEE using MVC based architecture.
- Involved in various phases of Software Development Life Cycle (SDLC) as requirement gathering, modelling, analysis, architecture design & development and the project was developed using Agile Methodologies.
- Developed Object Model from Hibernate mapping files.
- Extensively used Eclipse IDE for developing, debugging, integrating, and deploying the application.
- Developed JSP and pages HTML5 using CSS3 as part of the presentation layer.
- Developed web Components using JSP, Servlets and Server-side components using EJB under J2EE Environment.
- Involved in debugging the product using Eclipse and JIRA Bug Tracking.
- Apache Maven tool has been used for the build and deploy the application. Monitored the Error logs using Log4J and fixed the problems.
- Used Spring Validation framework to implement the server-side validations and used JQuery calls to get the data from the server asynchronously by using JSON objects.
- Enhanced an existing Angular 8 application to follow strict MVC patterns for improved source code maintenance which resulted in code reduction, ease of upgrade, scalability, ease of developer spins up and enhanced performance.
- Helped to finish assignments using several frameworks such as: Java applet, Spring MVC, Hibernate.
- The several technologies were used to create and deploy web pages such as JSP, JavaScript, HTML5, and CSS3.

- Written JUnit test cases for testing UI Framework classes and wrote many Java Scripts to do client-side validations Deployed Spring Boot based Microservices in Docker container by using AWS admin console Built cloud formation stacks utilizing JSON templates to deploy micro services as part of Jenkins.
- Used Spring Kafka API calls to process the messages smoothly on Kafka Cluster setup.
- Utilized Docker and Kubernetes for containerizing Node.js applications, ensuring consistency and reliability across different environments in a Microservices architecture.
- Deployed the applications in Linux servers using deployment scripts.
- Worked on JDBC to select and update the data from the MySQL database.
- Implemented AJAX in suggestive search and to display dialog boxes with JSF and DOJO for some front end.
- Created dynamic HTML5 pages, used JavaScript for client-side validations, and AJAX to create interactive front-end GUI.
- Developed several RESTful API web services which produces both XML and JSON to perform tasks.
- End-to-end Project Management, including customization of product based on the customer's requirement, meeting delivery deadlines on development, testing, implementation phases of the system and customer relationship consulting.
- Implemented the design patterns like DAO Factory, Singleton, Service Locator and Business Delegate.
- Extensively used XML and Java Architecture for XML Binding (JAXB), to map java classes to XML representation.
- Used Hibernate as ORM tool to store the persistence data into the Oracle database.
- Used Log4j for External Configuration Files and debugging.
- Developed Web Services using SOAP, WSDL and XML.

Environment: Java SE 7, J2EE, Hibernate, Servlets, JSP, Spring, MVC, Eclipse, JSTL, AJAX, JNDI, JMS, DOJO, WebSphere, XML, JAXB, SOAP, Log4j, SQL, Oracle, Windows.
