EDUCATION

University of California, Irvine

Irvine, CA

Bachelor of Science in Computer Science | GPA: 3.698/4.0

Relevant Courses

Data Structure Implementation & Analysis, Introduction to Data Management, Project in Databases and Web Applications

PROJECTS

Job Tech Stack | *React, ExpressJS, NodeJS, MongoDB, Vercel, Clerk*

Nov. 2024 - June 2025

- Built a full-stack platform that parses job descriptions to extract technical keywords and store structured JSON data in MongoDB.
- Developed a responsive frontend React-based application that uses Chart.js to render a keyword-frequency pie chart and a time-series graph tracking application volume.
- Implemented an Express API layer to handle text parsing, CRUD operations, and secure client-server communication.
- Validated REST API responses using Postman and browser network tools; verified backend data integrity against MongoDB records.
- Leveraged Vercel serverless functions to create CI/CD pipelines and Clerk's authentication service for seamless user sign-in, achieving auto-scaling and 99.9% uptime

To-Do List Application | *Java, JavaScript, React, NodeJS, MongoDB, Spring Boot*

July - Sept. 2024

- Formulated a modular to-do list app with Spring Boot backend exposing RESTful endpoints and MongoDB persistence.
- Implemented full CRUD functionality (create/read/update/delete) and session-based user authentication, enhancing task management reliability.
- Constructed a React frontend with dynamic components that update in real time on user interaction.
- Deployed backend on Railway and frontend on Vercel, ensuring CI/CD integration and zero-downtime updates.

Fabflix Movie Database Web Application | *Java, JavaScript, AWS, jQuery, Tomcat*

Sept. - Dec. 2023

- Engineered an end-to-end, low-latency movie catalog system handling thousands of titles with <500ms response times, hosted on AWS instance.
- Implemented 25+ features, including secure login (SHA-256 hashing), cart checkout, auto-complete search, and SQL-injection protection with Prepared Statements.
- Optimized backend performance via connection pooling, replication (+44% JDBC throughput), and Apache load balancing (+24% query speed).
- Designed an ETL pipeline to ingest and validate 5 MB+ XML data files, expanding the movie database with zero downtime.
- Performed detailed documentation, executed manual testing, and conducted software testing to ensure product functionality met quality standards.

TECHNICAL SKILLS

Languages : Java, Python, JavaScript, HTML/CSS, C# (familiar)

Databases & Data Formats : MySQL, PostgreSQL, MongoDB, JSON, XML

Frameworks & Libraries: React, Express, Node.js, Chart.js, Axios, jQuery, Spring Boot

DevOps & Tools: Git/GitHub, Docker, AWS EC2, Vercel, Maven, Linux, Bash, Postman, Jira, Agile, JUnit, Unit Testing, Playwright (learning)

APIs & Architecture: REST APIs, Microservices, MVC, Clerk Authentication
