SUMMARY

Dedicated and skilled Cybersecurity Analyst, bringing robust expertise in safeguarding sensitive information through innovative processes for analyzing unstructured data. Leverage advanced software tools to detect data security leaks or mitigate harm within client environments. Excellent customer-facing communication skills to ensure clear and effective interactions and foster strong client relationships. Committed to follow-through and challenging the status quo, to continuously strive to enhance cybersecurity measures and deliver exceptional results in fast-paced, dynamic environments

EXPERIENCE

Actfore (*Cybersecurity Analyst*)

Aug 2023 – Feb 2025

Utilize AL and ML tools to accelerate the discovery of sensitive information compromised by hackers after corporate system infrastructure breaches. Provide comprehensive subject-level identification and highlights of information to ensure a thorough and efficient identification of compromised data.

- Engage with clients to develop taxonomies for identifying sensitive B2B information and data elements through leading and organizing workshops
- Generated file paths to decrease 7 seconds per analyzed file, saving 48 business days of review time
- Conducted internal audits to verify data integrity of millions of lines of scraped data output.
- Manipulate and clean databases to create high-quality data analytics, reducing review time by 13 hours per output and saving \$1M in compromised data analysis cost
- Developed innovative Excel macros, Python workflows, and Visual Basic for Applications (VBA) scripts to streamline the cleaning and organization of risk reduction models.
- Deploy custom on-prem software installations to uncover cyber breach origins and pinpoint stolen sensitive information
- Orchestrated SCRUM meetings to allocate resources effectively and resolve issues in a timely manner
- Liaison with lawyers to provide customer fulfillment increasing client base
- Interpret and analyze data outputs to identify patterns, detect anomalies, and create predictive models to reduce the risk of future hacker attacks
- Process unstructured data using company proprietary software to detect sensitive info
- Utilize law [FERPA, HIPAA] to inform clients of stolen data from a cyber breach

Contemplative Science Center (*Student Intern*)

Sept 2022 – May 2023

- Identified data from business-related activities and compiled it into formal reports to management
- Proposed new operations plan to streamline day-to-day structure resulting in increased productivity
- Composed databases of client participation in facility events
- Maintained and tracked inventory lists

SKILL SET

- **Technical**
 - Discovery Center, Regular Expression, Python, Microsoft SQL Server, Power Query, Javascript, HubSpot, Access DBA, Microsoft Office [Excel, Word, PowerPoint,]

EDUCATION

University of Virginia - GPA 3.4

May 2023

B.A History with a minor in Economics and concentration in Computer Science
