PROFESSIONAL EXPERIENCE

Business Analyst | Scrum Master | Cornerstone Medical 2018-Present |

- Collaborates with development team to find solutions and problem-solving methods.
- Serves as a liaison between the customer community and the software development team to gather and communicate requirements, which help define and verify product scopes.
- Collaborates independently with stakeholders and system users to define concepts and clarify functional and non-functional requirements, understand current state of system processes, translate them into application and operational requirements, User Stories, Acceptance Criteria etc.
- Responsible for eliciting requirements using various techniques such as one on one interviews, documents analysis, requirements workshops, shadowing etc. depending on the type and phase of the project.
- Creates and maintain project schedules by developing project plans and specifications, tracking all phases of the project lifecycle, providing timely reporting of issues that impact project progress, coordinating actions and resolving conflicts, meeting minutes and schedules.
- Responsible for gathering project requirements, conducting Gap Analysis and creating process flows that outline the current and future state of the business process.

- Collaborates with Product Owner on Artefacts such as Product Backlog, Sprint Backlog, Product Increment and on Product Backlog Items prioritization.
- Collaborates with the QA team to conduct manual testing to ensure all products are built according to specifications and systems are free of bugs.
- Follows through with implementation of action points from Retrospective Meetings, towards continuous team improvement.
- Manages customer relationships and expectations by developing a communication process to keep others up to date on project results.
- Successfully completed 500+ hours of expert led instruction in machine learning through python and scored the models on different metrics.
- Cleans data from myriad of datasets, makes heatmaps, and bar charts for exploratory data analysis.
- Uses SQL to join tables and filter the data within key parameters.
- Monitors projects through the SDLC process using the Agile/Scrum methodology.
- Schedules and facilitates scrum ceremonies such as daily standup meetings, sprint planning, sprint review, sprint retrospective, and other Scrum related meetings with Scrum teams and stakeholders.
- Facilitates leadership sessions to help identify and remove impediments.
- Authors user guides, test scripts and conduct end user training, resulting in improved adoption of new services/features.
- Facilitates SCRUM ceremonies including daily standup and retrospectives to monitor projects using the Agile/SCRUM methodology.
