SOFTWARE QA ENGINEER

Passionate **Software QA Engineer** with 5+ years of experience who is willing to be accountable for the results of his work and conscientiously fulfills the required responsibilities. Brings positive energy to the team with high productivity and perseverance in achieving set goals. With expertise in front-end and back-end testing for web-based applications and devices. Proficient in JIRA for project workflow, Postman for API testing, and Linux command line for server communication. Successful track record of high-quality release delivery and key insight into software improvements.

EXPERIENCE

Software QA Engineer

Insight Global contracted to Nielsen

August 2022 - Present

- Participating in testing efforts for a project for *Metering Technologies and Audio Measurement*.
- Perform regression, smoke, E2E testing, and monitor debugging process results by testing web-based application and Smart Devices for Metering Technologies and Audio Measurement.
- Reduce regression testing time by optimizing and maintaining an automation testing framework Playwright with JavaScript for UI.
- Strong knowledge of JIRA, project workflows, and communication in tickets.
- Used Linux command line to communicate with the server to track log files.
- Developed and executed detailed API test cases using Postman, covering various scenarios including positive and negative test cases.
- Created and executed MySQL queries to validate data integrity across multiple projects.
- Authored a thorough test plan, accurately estimated testing efforts, prepared meticulous test cases, executed comprehensive test runs, identified and diligently documented bugs in detailed reports, and effectively summarized the project's progress in a work summary report.
- Developed an effective testing strategy, involving the utilization of pre-existing scenarios and various device types. This strategy enabled a more comprehensive coverage of application functionality and compatibility. Organized the work of two teams for analyzing testing results, ensuring productive collaboration between the teams that facilitated the swift identification and resolution of identified issues.
- Responsible for presenting all completed user stories to stakeholders at the end of each two-week sprint.

QA Engineer

EDCAST Inc

December 2018 - July 2022

- Performed quality assurance on an *E-commerce Learning Experience platform project*, delivering the highest-rated release based on user feedback.
- Used exploratory testing methods to uncover unique issues and scenarios not covered in regular test cases.
- Played an integral role in testing new features, proactively identifying issues, and submitting detailed bug reports to ensure prompt resolution.
- Improved the clarity and comprehensiveness of test cases and documentation for better understanding among team members.
- Maintained a positive attitude, boosting team morale and motivation during challenging phases of the project.
- Created SQL queries to validate data integrity in the database (MySQL).
- Gained exposure to test automation through developing basic Java/ Selenium script for web UI testing.
- Deployed new builds to the testing environments and updated all existing test plans in order to match the current product requirements.

EDUCATION

Bachelor in Economics

St.Petersburg State University

CERTIFICATIONS

Stanford Online Certificate for DataBases: Relational Databases and SQL

SKILLS

- REST API / Postman /Swagger
- Database: MySQL
- Test Management Tools: Jira /TestRail
- Methodology: Agile/Scrum
- OpenWRT / TCP/IP / Ethernet / WiFi/ Wireshark
- Playwright / Selenium
- JavaScript /Java
- GitLab / Docker / AWS / Jenkins / Linux / Ubuntu / Oracle VM VirtualBox
