WORK EXPERIENCE

Operations Business Analyst, Teladoc Health - Boston

Oct 2021 – Present

- Directed automation of 300 practitioner rosters through Python libraries in Jupyter Notebook; personalized to client preferences (state, products, lines of business). Achieved a 40% reduction in monthly roster production time by eradicating manual tasks also trained the team, boosting productivity by 30%
- Deployed advanced visualization software (Tableau/ Microsoft Power BI) to create interactive dashboards to monitor and report on KPIs, also provide insights on improved decision-making for management by 20%
- Developed and upheld MS Excel, data analytic tools to facilitate client reporting, resulting in a 20% reduction in reporting time and increasing operational efficiency
- Formulated and delivered monthly executive presentations, highlighting business insights and value enhancements derived from business intelligence tools and strategies
- Collaborated cross-functionally with the team to handle large-scale data sets and translate business requirements into SQL queries to provide business insights
- Implemented solutions for more than 15 ad-hoc requests weekly and coordinated with stakeholders

Data Scientist, ISmile Technology – Illinois

Dec 2020 -Mar 2021

- Deployed Python scripts for data cleaning and preprocessing, elevating data quality and analysis accuracy; resulting in a 30% productivity increase and ultimately reducing turnaround time
- Devised and implemented an innovative Business Intelligence (BI) system with predictive analytics capabilities, boosting data prediction accuracy by 35% and transforming decision-making processes
- Crafted engaging dashboard visualizations using Tableau to monitor and present real-time data
- Managed to simplify SQL queries and data structures in R, boosting overall efficiency by 25%
- Led the development of novel statistical analysis models through collaborative teamwork, leveraging advanced algorithms to extract insights

Junior Software Engineer, WebCraft IT - Indore

Jul 2015 – Mar 2019

- Conceptualized and brought to life a user centric front-end interface through HTML, CSS, and JavaScript, driving a 30% surge in user interactions, a 20% rise in page views
- Led thorough testing and debugging processes, uncovering and addressing more than 35 bugs throughout the software testing phase, guaranteeing a high-quality, error-free software product
- Generated technical documentation and assisted clients and end-users, aiding in understanding and utilizing the software

ACADEMIC PROJECT

Northeastern University - Boston

Sep 2019 - Jun 2021

- Analysis of US Aviation Industry – Created a notebook in Databricks utilizing SQL and Python to find out the busiest airport in the US, the top five popular airlines, average arrival, and departure delay
- Led a data analysis project on General Electric aviation dataset using R and Python, implementing feature selection, clustering, one-hot encoding, logistic regression, random forest, and decision tree models, resulting in a 40% reduction in system alerts triggered by employees
- Established a model for prediction using logistic regression, neural network, decision tree & random forest for environmental & food triggers to get advanced warnings against asthma for Keva Health subscribers

EDUCATION

Northeastern University, Boston

Jul 2021

Master of Science in Data Analytics with a concentration in Statistical Modeling

Rajiv Gandhi Technical University, India

Jun 2015

Bachelor of Engineering in Electrical & Electronics Engineering

SKILLS

- Data Analysis | SAS | Google Analytics | Stakeholder Communication | Statistical Modeling | SQL Querying & Database Management | Business Process Optimization | Business Process Improvement | Process Flow Diagram | Agile methodology | System Design | Data Warehouse | Data Extraction | Data Integration | Data Manipulation
- Certification:** Azure | Tableau Essential | Storytelling with Data | Analyzing Big Data with Hive
