

Aditya Namdeo Sargar

Software Engineer

Boston, MA | +1 (206) 659-1854 | sargaraditya22@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

- Highly skilled Software Engineer with over 4+ years of experience in software development, specializing in backend development, API design, and cloud-based solutions.
- Proficient in Python, Django, Flask, Java, Angular, React, and AWS, with a strong background in microservices architecture, RESTful APIs, and data processing.
- Skilled in building scalable solutions, optimizing system performance, and automating processes to enhance operational efficiency.
- Experienced in Agile methodologies (Scrum & Kanban), ensuring effective project management and timely delivery of high-quality software.
- Proficient in using ETL tools like Apache Airflow, Talend, and SSIS to automate data workflows and enhance data processing efficiency.
- Expertise in designing and maintaining CI/CD pipelines using tools like Jenkins, Azure DevOps, and Docker, ensuring faster and reliable software releases.
- Adept at integrating complex systems, streamlining business workflows, and ensuring alignment between business needs and technical solutions.
- Passionate about leveraging cloud platforms (AWS, Docker) to build robust, data-driven applications and deliver actionable insights for business improvement.

PROFESSIONAL EXPERIENCE

Software - Data Engineer

McKinsey & Company, Boston, MA

Jun 2024 – Current

- Deployed ETL pipelines using Apache Airflow for automating data extraction from MongoDB, transforming the data, and loading it into a PostgreSQL database, reducing processing time by 3 hours per day.
- Developed and implemented RESTful APIs using Django for integrating the backend with external services, efficiently handling over 500 API requests daily and ensuring seamless data flow across systems.
- Developed and maintained CI/CD pipelines using tools like Jenkins and GitHub Actions to automate testing, deployment, and monitoring, ensuring seamless integration and delivery of applications.
- Designed a cloud-based solution using AWS S3 and Docker for data storage and management, enabling scalable data storage for over 5TB of unstructured data in less than 2 months.
- Simplified data querying processes using SQL Server, reducing query execution times by handling 5 million records and improving data retrieval speeds by 25%.
- Orchestrated containerized services using Kubernetes, implementing efficient scaling strategies and ensuring high availability and fault tolerance for microservices.
- Spearheaded the migration of legacy systems to a new microservices architecture using Django REST framework, streamlining the scaling and deployment of services to support the requirements of three departments.
- Integrated AI-powered Large Language Models (LLMs) into client-facing tools, enabling automated responses and improving report generation efficiency for data-driven decision-making.
- Collaborated with cross-functional teams to implement Agile methodologies and facilitate daily stand-ups, sprint planning, and retrospectives, ensuring timely project delivery for 6+ features in the first quarter.

Software Data Engineer

Amherst Intelligent Security, Boston, MA

Nov 2023 – May 2024

- Optimized RTSP video streams via Amazon Kinesis Video Stream, reducing buffering time by 40%, decreasing error rates, and enhancing bitrate within 24 hours.
- Containerized Python applications with Docker, standardizing development environments and enabling smooth deployment across multiple platforms.
- Collaborated with cross-functional teams to integrate CI/CD workflows with infrastructure as code (IaC) tools, enhancing deployment consistency and reducing downtime.
- Architected a scalable video file storage and processing system on Amazon S3, utilizing multi-part uploads and optimal storage classes to achieve a \$30,000 cost savings.
- Designed and implemented a motion detection model, integrating it with Flask API for efficient data processing and seamless interaction with the Groundlight API.
- Integrated Elasticsearch with security systems to enable real-time search across incident logs, reducing search times by 3 minutes per query.
- Automated routine data updates using Python, reducing manual intervention from 6 hours to 30 minutes daily, streamlining security data workflows.

Software Development Engineer Intern

Amazon.com, Seattle, WA

Sep 2022 – Dec 2022

- Built a full-stack application to automate the ticket update process, reducing production delays and improving operational efficiency by 50%.
- Developed a Java-based Data Access Object (DAO) and integrated frontend and backend components via API calls, enhancing system performance and reducing response times by 900 ms.
- Designed and implemented the frontend using React.js and Bootstrap, incorporating custom React components to achieve a 30% improvement in user satisfaction.
- Collaborated in an Agile environment using Git for version control, ensuring seamless code integration and prompt resolution of development issues.

Software Engineer

Atos Syntel, Mumbai, India

Nov 2018 – Jul 2021

- Designed and deployed a Python-based microservices file transfer system using Flask, Celery, RabbitMQ, and Redis, optimizing data transfer efficiency through RESTful APIs for FTP, SFTP, and HTTP with parallel processing and fault tolerance to ensure enhanced reliability and scalability.
- Built a responsive Angular dashboard integrated with a Node.js and Express.js backend, implementing a RESTful API to deliver real-time ticket insights, improving front-end and back-end communication and operational efficiency.
- Automated data tasks using SQL Server Integration Services (SSIS), troubleshooting and debugging packages, reducing manual intervention and saving 7 hours per week by identifying and resolving errors.
- Streamlined customer inquiry management by leveraging Oracle RightNow CX, automating the routing and handling of over 500 customer inquiries daily, resulting in a 25% reduction in response time and increased customer satisfaction.

TECHNICAL SKILLS

Programming Languages	Python, Java, JavaScript, SQL, C, C++, Go, Wordpress
IDE and Frameworks	Spring Boot MVC, IntelliJ IDEA, Visual Studio, R Studio, Jupyter, NetBeans
Web Development	React, Angular, Express.js, RESTful API
Backend Technologies	Spring Boot, Spring MVC, Django, Flask, Hibernate, JPA (Java Persistence API)
Database Systems	MongoDB, DynamoDB, MS SQL Server, MySQL, PostgreSQL
Cloud Technologies	Amazon Web Services (AWS), Docker, Amazon S3, Amazon Kinesis Video Stream, Snowflake
ETL Tools	Apache NiFi, Apache Airflow, Talend, Informatica, Microsoft SSIS (SQL Server Integration Services),
CI/CD, Docker, Kubernetes, DevOps, Kafka, Spark	
Version Control	Git, GitHub, GitLab
Testing Tools	JUnit, Selenium, PyTest, Postman
Frameworks & Libraries	Spring MVC, Express.js, Flask, Django, NumPy, Pandas, Scikit-Learn, Tensorflow, FastAPI, AngularJs, ReactJS, Redux, Bootstrap
Development Method.	Agile (Scrum & Kanban), LLM, Machine Learning, Computer Vision, Data Warehousing, SDLC, Test-Driven Development (TDD), Behavior-Driven Development

PROJECTS

Web Developer	Aug 2023 - Jul 2024
Rebecca Everlene Trust Company	Boston, MA
• Maintained web pages for the MedKids on WordPress, using HTML, custom CSS, and React, working closely with product managers and designers to translate design mockups into functional interfaces	

EDUCATION

Master of Science, Information Systems	Sep 2021 – May 2023
Northeastern University	Boston, MA
Bachelor of Engineering, Computer Science	Aug 2014 - Jun 2018
Mumbai University	Mumbai, India
