PROFESSIONAL EXPERIENCE

Barti Software

Software Engineer

California, USA

Jan 2024 - Present

- Developed a **full-stack** recurring appointments feature for the Barti calendar from scratch using **Python, Flask, ReactJS, GraphQL**, and Mobiscroll, resulting in an 80% improvement in appointment management efficiency.
- Led integration of **E-fax and E-sign APIs**, storing signatures on GCS, reducing manual work for 150+ optometry customers.
- Designed the load phase of the **ETL pipeline**, optimizing batch ingestion of patient data from MDM. Leveraged **Google Pub/Sub** for scalable **batch processing**, enabling real-time synchronization and reducing migration time by 50%.
- Implemented **Elasticsearch** to index Barti Eye Exams, improving search speed by 40% and user satisfaction by 30%.
- Enhanced patient portal's UI and backend with **distributed GraphQL resolvers**, optimizing data fetching and reducing API calls by 35%. Configured a scalable backend with **FastAPI** and **Docker Compose** to simplify development.
- Built an AI-powered chatbot for eye exams using **RAG and Llama 2**, enabling context-aware interactions. Integrated vector databases and NLP techniques for efficient retrieval and fine-tuned responses, improving engagement and support.
- Integrated 5+ backend services into GKE using **Kubernetes, Docker, and Terraform**, streamlining scaling and deployment.
- Participated in **Agile Software Development Life Cycle (SDLC)**, managing version control and continuous integration and deployment (**CI/CD**) pipelines using **GitHub Actions**, reducing Sentry issues by 30% through streamlined releases.

True Credits Private Limited

Software Engineer - II

Gurugram, India

Apr 2022 - Dec 2022

- Led the development of scalable backend APIs leveraging **Spring Boot, Java, and microservices architectures**.
- Optimized month-end report generation, reducing processing time from 1 hour to an average of 3 minutes, by implementing efficient table-joining operations on 500 million+ rows using **AWS S3, Glue, Athena**, and optimized **SQL** queries.
- Architected a **Kafka-based event-driven pipeline** handling 1M+ lending decisions per month, cutting credit check latency from 5s to 1.5s. Enabled dynamic fallback for 15% of transactions, boosting approval rates and ensuring high availability.
- Authored a whitepaper to boost the company's Refer and Earn program, increasing its contribution by 4% of total transactions.
- Managed integrations with third-party vendors, developed resilient **APIs** with robust error handling, and maintained API documentation using **Swagger**. Optimized performance, security, and **code quality** through **refactoring** and best practices.

Software Engineer - I

Mar 2021 - Apr 2022

- Built a custom CMS platform using **React, TypeScript, and Redux**, enabling CS teams to assist customers and internal teams to manage flags, override loans, and monitor risk, handling 10,000+ support queries and 5,000 flagged cases monthly.
- Optimized **SQL queries** in legacy systems, enhancing API performance for 50,000+ transactions/month with minimal latency.
- Developed **Grafana dashboards** for the Welcome Loan product, reducing loan disbursement delays by 35% and transaction failures by 25% through real-time monitoring of approval rates, processing times, and API latencies.
- Conducted comprehensive **code reviews**, eliminating 15 redundant modules and optimizing critical APIs to enhance server performance; these improvements resulted in annual operational cost savings exceeding \$20,000 for the company.
- Played a pivotal role in **Java debugging**, authoring unit testing and integration testing using **JUnit and Mockito**. Invented a localization feature to enhance loan conversion rates by implementing user-centric language settings.

Digidiya Web Solutions

Software Engineer

Delhi, India

Apr 2020 - Mar 2021

- Engineered global applications using the **MERN** stack, delivering high-performance and scalable solutions for 100+ clients.
- Translated client needs into actionable technical requirements, ensuring delivery of scalable applications with **React Native**.
- Directed **AWS EC2** deployments, integrated **Firebase** for app functionality and built a CMS for employee time tracking.

SKILLS

Programming Languages
Frameworks and Libraries
Databases
Cloud Services
Tools and Platforms

Java, Python, C/C++, C#, JavaScript(ReactJS, NodeJS, React-Native), HTML/CSS
Spring, Spring Boot, Flask, Hibernate, JPA, .Net, Pyspark, PyTorch, LLMs
MySQL, PostgreSQL, MongoDB, DynamoDB
AWS (EC2, S3, Athena), GCP (Kubernetes, Pub/Sub, BigQuery, Vertex AI), Firebase
GitHub, Docker, Kafka, Jira, Gradle, Confluence, Linux, Bash, Jenkins, Postman

EDUCATION

University of Michigan

Masters in Computer and Information Science

3.96/4.00

Jan 2023 - Dec 2024

Courses: Advanced Operating Systems, Design/Analysis of Algorithms, Big Data, Software Architecture and Design Patterns, Artificial Intelligence, Security and Privacy in Cloud Computing (GCP), Data Structures

JC Bose University of Science and Technology

Bachelors of Technology in Computer Science

8.04/10.00

May 2017 - Apr 2021
