

ANIRUDH PUDICHETI

Data Engineer | BI Developer | Analytics & Cloud Specialist
Anirudh7049@gmail.com | +1 (678) 549-9708 |

PROFESSIONAL SUMMARY

Results-driven Data Engineer and BI Developer with 3+ years of hands-on professional experience building scalable data pipelines, enterprise BI solutions, and CRM-driven automation — backed by an advanced degree in Big Data Analytics. Proven expertise across the Microsoft Power Platform (Power BI, Power Apps, Power Automate, Dynamics 365) and core data engineering tools (SQL, Python, ETL pipelines, Oracle PL/SQL). Demonstrated ability to translate complex business requirements into production-grade analytics solutions for global clients including Allianz. Adept at Agile/Scrum delivery, data quality governance, and cross-functional team collaboration.

TECHNICAL SKILLS

BI & Visualization	Power BI (DAX, Power Query, DirectQuery, RLS), Tableau, AWS QuickSight, SSRS
Data Engineering	SQL, T-SQL, Oracle PL/SQL, ETL Pipelines, SSIS, Apache Airflow, Databricks
Low-Code / CRM	Microsoft Dynamics 365, Power Apps (Canvas Apps), Power Automate, REST API Integration
Programming	Python (Pandas, NumPy, Flask, FastAPI, SciPy, BeautifulSoup), R, SQL scripting
Cloud Platforms	Azure (ADF, Synapse, ADLS, Azure SQL, Azure ML), AWS (S3, Redshift, SageMaker), Snowflake
Databases	MS SQL Server, Oracle 10g/11i, MySQL, MongoDB, IBM DB2
AI / ML	Scikit-learn, TensorFlow, NLP (spaCy, NLTK, VADER), Facebook Prophet, XGBoost, MLFlow
DevOps & Governance	Azure DevOps, CI/CD pipelines, Git, Agile/Scrum, UAT coordination, Data Lineage & MDM

WORK EXPERIENCE

Data Engineer	Oct 2025 – Present
MSRCosmos LLC United States (Remote)	
- Design, develop, and maintain SQL- and Python-driven ETL pipelines processing large structured datasets for analytics and operational reporting across enterprise clients. - Write and optimize complex SQL queries and Oracle PL/SQL logic for data extraction, transformation, validation, and loading into downstream reporting layers. - Build and enhance Power BI dashboards to visualize KPIs, operational metrics, and performance trends for stakeholder decision-making. - Implement data quality checks, reconciliation rules, and integrity validations across multiple integrated systems to maintain reporting accuracy and consistency. - Utilize Python scripting for data analysis, anomaly detection, automation, and scheduled reporting workflows. - Research and evaluate AI/ML techniques — including forecasting, predictive analytics, and NLP — for potential integration into analytics solutions. - Collaborate with cross-functional stakeholders to translate business requirements into technical data specifications and scalable pipeline architectures. - Contribute to documentation and best practices for maintainable, production-grade data engineering pipelines.	
Systems Engineer (Data & CRM)	Nov 2021 – Jul 2023
Infosys Limited Hyderabad, India	
Client: Allianz Financial Services, Munich, Germany (German Banking & Insurance)	

- Designed and developed a fully paperless CRM solution for Allianz Dynamics 365 in Munich, covering order creation, bill payments, equipment sales, inventory report management, and user administration.
- Built Customer Billing User Interface using Power Apps (Canvas Apps) and Power Automate, implementing business rules on form pages and a modal dialog box for error handling on failed customer orders.
- Automated end-to-end business workflows using Power Automate, triggering actions based on user inputs, system events, and scheduled executions — significantly reducing turnaround time and manual effort.
- Integrated Power Automate flows with web applications, CRM systems, and REST APIs to streamline data movement and automate email notifications across business processes.
- Collaborated with cross-functional teams to perform root-cause analysis, troubleshoot data/performance issues, and support system monitoring initiatives.
- Actively participated in Agile/Scrum ceremonies including sprint planning, backlog grooming, retrospectives, UAT coordination, and production release activities.
- Documented ETL processes, data transformation logic, KPI definitions, and troubleshooting steps for long-term maintainability and team onboarding.
- Mentored junior engineers on data integration best practices, performance monitoring, and Python/SQL optimization strategies.
- Supported UAT and production deployments by validating data outputs against business requirements and source system records.

ACADEMIC PROJECTS

E-Commerce Sales Analytics Dashboard

2024 – 2025

University of Central Missouri — Academic Capstone | Full-Stack | Python | BI | ML

A production-ready, full-stack analytics platform built as a comprehensive academic capstone project, demonstrating enterprise-grade data engineering and BI development skills.

- Architected a microservices-based application using Flask backends distributed across multiple service ports (5050, 5002, 5003) with a dual-database design combining MySQL (structured transactional data) and MongoDB (unstructured review/sentiment data) — implementing polyglot persistence principles.
- Built eight core analytics modules: Sales Forecasting, RFM Customer Segmentation, Sentiment Analysis, Inventory Intelligence, Cohort Analysis, Product Performance, Geographic Analytics, and Executive KPI Dashboard.
- Implemented Sales Forecasting using Facebook Prophet, achieving 87.7% accuracy with confidence interval visualization and sub-2-second API response times.
- Developed NLP-driven Sentiment Analysis pipeline using VADER for customer review scoring, integrated with MongoDB for unstructured data storage and real-time processing.
- Ingested real-time external marketplace data through Walmart and Amazon APIs, enabling live product comparisons and competitive pricing analytics within the dashboard.
- Designed RFM (Recency, Frequency, Monetary) customer segmentation model to classify customer tiers and drive targeted marketing recommendations.
- Resolved complex technical challenges including JSON serialization errors, MongoDB integration issues, API data ingestion edge cases, and frontend modal implementations through systematic debugging.
- Delivered a responsive frontend dashboard featuring interactive charts, drill-down filters, and dynamic modals, demonstrating end-to-end product development from data pipeline to user interface.

Research Publication: Spam Email Detection using Machine Learning

- Conducted a comparative study of five supervised ML models (Naïve Bayes, SVM, Random Forest, Logistic Regression, XGBoost) using the Kaggle SMS Spam dataset.
- Designed an end-to-end NLP classification pipeline with tokenization, stopword removal, stemming, TF-IDF feature extraction, and rigorous evaluation using confusion matrices and accuracy metrics.

EDUCATION

Master of Science — Big Data Analytics & Information Systems

2023 – 2025

University of Central Missouri, Warrensburg, MO

Bachelor of Engineering — Mechanical Engineering

2018 – 2021

Jawaharlal Nehru Technological University Hyderabad (JNTUH), India
