

Arun Kumar Jamalapuram

Software Developer

660-528-5005 | arun.j@careernb.com | Bellevue WA

SUMMARY

- 5+ years of experience as a Software Developer, delivering high-quality web applications through all stages of the development lifecycle (design, development, implementation, testing). Proven ability to translate business requirements into functional and user-friendly applications.
- Utilizing automation tools to automate testing and deployment tasks within an Agile framework, significantly improving efficiency and reducing the testing phase deployment time.
- Proficient in developing Kafka Producers and Consumers using Java API or Spring Kafka library.
- Demonstrated expertise in at least one leading front-end framework and libraries like React.js, Angular, HTML5, CSS3, JavaScript, Bootstrap5, jQuery, Ajax, JSON, XML, SOAP API and Redux to construct complex, modular, and reusable UI components, leveraging virtual DOM for performant updates.
- Created interactive and responsive user interfaces using React, leveraging JSX, Virtual DOM, and one-way data flow. Utilized Node.js for building scalable server-side applications and RESTful APIs.
- Proficient in backend and frontend technologies like Spring Boot, Spring MVC, Spring REST, Restful API, and MongoDB, PostgreSQL for comprehensive web application development.

TECHNICAL SKILLS

- **Methodologies:** SDLC, Agile/Scrum, Waterfall
- **Languages:** C, Java, Python, SQL, JavaScript
- **Frameworks/Libraries:** Microservices, Spring Boot, Spring MVC, Spring Cloud, React.JS, NodeJS Angular, OAuth 2.0
- **Web Technologies:** HTML5, Tailwind CSS, JavaScript, jQuery, Bootstrap, Ajax, XML, Redux, TypeScript
- **Cloud:** AWS (Lambda, EC2, S3, ECS, ECR, CloudWatch), Apache Tomcat, Kafka,
- **Database:** MySQL, PostgreSQL, MongoDB, Oracle
- **Tools:** Git, SVN, Jenkins, GraphQL, Grafana, Postman, Mockito, JUnit, Docker, Kubernetes, Splunk
- **Operating System:** Windows, MacOS, Linux

EDUCATION

Master of Science in Computer Science

Northwest Missouri State University

Maryville, Missouri

EXPERIENCE

JPMorgan Chase & Co., TX

Feb 2023 – Present

Software Developer

- Improved code quality and consistency by integrating static code analysis and unit tests into the CI/CD pipeline for React.JS, NodeJS, and backend projects.
- Migrated legacy database to a modern solution and successfully migrated a large-scale application to a new database using Spring Data JPA, reducing query execution time by 30%.
- Implemented state management in React applications using Redux and MobX, optimizing data handling for complex applications with single-directional data flow.
- Used Spring JDBC for persistence objects in a database and included the concepts of Spring boot starter, dev tools, JPA, MySQL-connector, and Auto-wired concepts of Rest Controller, Service, Entity, and Repository.
- Integrated Spring Cloud Stream and Spring Cloud Task for asynchronous messaging and task execution, enhancing system scalability and enabling efficient, loosely coupled microservices communication.
- Design and implement 8+ microservices using Spring Boot, achieving a 30% reduction in application complexity.
- Contributed to the production deployment and monitoring of an application into AWS EC2, utilizing tools such as Elastic Beanstalk, Lambda, Code Deploy, and CloudWatch.
- Orchestrated efficient NoSQL database solutions with DynamoDB, optimizing data retrieval times by 25% and implementing partition key strategies for reduced query latency.
- Boosted API performance by optimizing RESTful APIs and GraphQL queries, implementing caching strategies and query optimization techniques that reduced response times by 20%.
- Accelerated application deployment by 50% through the implementation of robust CI/CD pipelines leveraging Kubernetes and industry-leading tools like Jenkins and GitLab CI.
- Wrote unit-test cases to obtain Sonar Quality for each Git version for spring boot APIs using JUnit and working on Jira stories to align with Confluence.

- Utilized extensive expertise in modern technologies, including React, NodeJS JavaScript, TypeScript, Nodejs, jQuery, HTML5, CSS, Spring Framework, JUnit, SOAP, and REST, to deliver high-performance applications.
- Performed coding standards and best practices within the Angular project, leading to a 25% decrease in bug rates and upgraded code maintainability by testing using Junit, Cucumber and Mockito along with Spunk as a monitoring tool.
- Involved in major system conversions, demonstrating proficiency in transitioning outdated applications to modern, Microservices Spring Boot-based systems.
- Developed and maintained production web applications using Java 11 & 8, J2EE, JavaScript, and associated technologies within a collaborative team environment.
- Designed and developed APIs leveraging microservice architecture, utilizing Spring Boot for efficient development and JMS for asynchronous communication with Kafka as the message broker.
- Implemented form validation, and error handling, and utilized Angular Material components to ensure data accuracy and create visually appealing user interfaces following coding standards.
- Demonstrated solid experience in backend development, working with PostgreSQL, Oracle databases, and tools like H2 Console for data transfer and maintenance.
- Updated and modernized code to adhere to Spring's coding conventions and design patterns, integrating Spring components like IoC and Spring MVC framework.
- Accomplished Test-Driven Development (TDD) practices and unit testing frameworks, such as JUnit, to minimize bugs during User Acceptance Testing (UAT) and System Testing.
- Executed Spring MVC, and JPA to construct RESTful APIs, leading to an 18% increase in API response times and improved integration capabilities of applications.
- Enhanced and managed the CI/CD pipeline using Jenkins and Docker, implementing automated testing and deployment within an agile development framework for seamless backend changes integration and delivery.
