EDUCATION

University of Texas at Arlington

Arlington, TX | Jan 2023 – Dec 2024

Master of Science in Information Systems

Relevant Coursework: Data Science, Data Mining, Business Statistics and Advance Analytics, Web and Social Analytics, Data Warehouse and Business Intelligence, Project Management

University of Mumbai

Mumbai, India | Jul 2017 – Jun 2021

Bachelor of Engineering in Computer Science

SKILLS

Technical Skills: Python (Pandas), SQL, Database, Data Visualization, Data Mining, Data Cleaning, ETL, Excel (Pivot Tables), Machine Learning (Regression, Classification algorithms, NLP, Text Analysis)

Tools: Power BI, MySQL, MS SQL, Microsoft excel, SAS Enterprise Miner, Stata, Jupyter Notebook, Jira, Snowflake

EXPERIENCE

DataPent Inc. (CodersData) | Data Analyst

Remote | Feb 2025 - Present

- Proactively explored internal data systems and led self-initiated training in Snowflake, integrating with AWS S3 for secure data ingestion, managing virtual warehouses, and configuring access controls.
- Built demo ETL pipelines and dashboards by connecting Snowflake to Power BI, and documented project workflows using JIRA to track tasks and collaborate with cross-functional teams.

FirstEnergy Corp. | Data Analyst Intern

Akron, OH | May 2024 – Dec 2024

- Collaborated with cross-functional teams to gather and analyze system requirements, leading research efforts to advance the EMS alarm management system by enhancing responsiveness, operational efficiency, and timely operator intervention.
- Used Pandas to preprocess data, implementing an initial approach that identified 62.2% of transient alarms for removal. Optimized the EMS alarm system with a secondary approach to decrease prolonged nuisance alarms by 13.4% using time-based filtering and frequency analysis techniques.
- Established a quarterly auditing process to proactively identify Operator Human Performance needs, NERC Standards compliance, and training requirements.
- Utilized Python for data restructuring and cleansing, combined with advanced visualization techniques, such as detailed trend analysis, to derive actionable insights from complex datasets.
- Developed a meter accuracy classification framework using RTU point lists, FileNet drawings, and metering data analysis to assess field equipment against EMS accuracy parameters, resolve state-estimator discrepancies, and enhance system model accuracy.

Brain Infinite Eduprise | Intern

Mumbai, India | Jan 2022 – Jul 2022

- Managed websites daily updates and maintenance, ensuring accurate and timely information delivery on the landing page within a 3-person team. Resulting 15% increase in user engagement over five months.

ACADEMIC PROJECTS

Art Authentication System

- Developed a machine learning model to authenticate artworks, enhancing the verification process.
- Utilized a variety of algorithms, including Logistic Regression, SVM, Random Forest, and Convolutional Neural Networks, to focus on image-based feature extraction and classification.
- Achieved breakthrough results with an AI-driven authentication model using CNNs, reaching 98.34% accuracy in verifying artist signatures, significantly aiding in the fight against art forgery.

Employee Performance Analysis

- Develop a model to forecast employee turnover of a company and enhance retention strategies.
- Analysed a dataset of 14,999 employee records using logistic regression and random forest models with SAS Enterprise Miner to accurately predict turnover with 83.1% accuracy, identifying key factors influencing employee decisions.
- Developed a classification system to assess turnover risk levels and leveraged KNN to match employee profiles, enhancing targeted retention interventions and supporting strategic decision-making.

Market Segmentation and Sales Analysis for Adventure Works

- Leveraged Python and Power BI to perform advanced analytics, including clustering, decision trees, and ARIMA modeling, identifying key customer segments and forecasting sales trends.
- Engineered features like Discount Effectiveness and Price-Discount Ratio to optimize pricing strategies and improve predictive model accuracy for repeat purchases and profitability.
- Designed interactive dashboards (executive, customer, product, and geographic) to visualize insights, streamline decision-making, and support inventory planning and marketing strategies.
