
SUMMARY

- Over 4+ years of software development experience, specializing in Java, Spring, Spring Boot, Spring Security, Hibernate ORM (Object Relational Mapping), and RESTful API development for enterprise applications in the financial, IT Consulting, and education sectors.
- Proficient in full-stack web development using HTML5, CSS3, Bootstrap, JQuery, JSP/Servlets, React.js, AngularJS, and Node.js to build responsive and dynamic applications.
- Utilized Agile and Waterfall methodologies within cross-functional teams to deliver robust software solutions on time, while applying a strong foundation in data structures, algorithms, and object-oriented programming (OOP) principles to write efficient and maintainable code.
- Extensive experience with SQL, Oracle, MySQL, and PostgreSQL, optimizing complex queries for enhanced performance.
- Expertise in containerization and orchestration using Docker and Kubernetes, ensuring scalable and efficient deployments.
- Strong skills in CI/CD automation with Jenkins, Git, Maven, and Gradle for smooth software delivery.
- Proficient in cloud infrastructure management and optimization, deploying applications in AWS and Kubernetes, with hands-on experience in EC2, S3, and RDS.
- Integrated machine learning and predictive analytics in processing EEG/ECG data for real-time military applications, contributing to complex military research projects focused on driver behavior analysis and predictive modeling.
- Created detailed test scripts and collections in Postman for end-to-end API testing, covering scenarios like authentication, error handling, and data integrity.
- Optimized ETL processes using Java and SQL to improve data processing efficiency and reduce load times for enterprise-level applications.
- Developed user guides and API reference documentation, enabling developers and stakeholders to understand and effectively utilize software features.
- Ensured data security and compliance with industry standards by implementing data governance policies in software development processes.
- Adept in version control and collaboration tools like GitHub, Bitbucket, and JIRA for managing code repositories and tracking progress.

WORK EXPERIENCE

Software Engineer FIFTH THIRD BANK

Aug 2023 - Present
Ohio

- Engineered and maintained enterprise-level applications using Java and Spring Boot for the Vision Item Processing team, enhancing check-processing workflows with high performance, security, and scalability.
- Built and deployed RESTful APIs and implemented Angular for the frontend, improving data transmission efficiency and delivering a dynamic user interface while utilizing Spring Security and OAuth2 for secure authentication and authorization.
- Utilized AWS Lambda for serverless computing solutions, enhancing application efficiency through event-driven architecture, and executed containerization and orchestration of deployments with Docker and Kubernetes to standardize CI/CD pipelines for reliable delivery.
- Conducted comprehensive API testing using Postman on 15+ endpoints, ensuring functionality, performance, and security, while establishing data governance policies and creating technical documentation for backend systems and APIs.
- Maintained version control using GitHub, overseeing code repositories, performing code reviews, and collaborating with cross-functional teams to implement new features and bug fixes.

Software Engineer / Graduate Research Assistant Kennesaw State University

Jan 2023 – Jul 2023
Georgia, USA

- Collaborated on a defense project focused on predicting driver behavior (such as braking, acceleration, and lane changes) by analyzing EEG, ECG signals, and eye movement data, aiming to enhance vehicle safety systems.
- Developed a real-time web application that predicts driver actions (acceleration, braking, or lane changing) based on EEG and ECG data for military purposes.
- Developed and maintained ETL processes to support seamless data migration and integration, ensuring consistency across multiple systems while managing complex SQL queries in Oracle databases for optimized data access performance.
- Designed and implemented the frontend using ReactJS, enabling real-time monitoring and displaying of driver state through dynamic, responsive interfaces.
- Developed the backend with Spring Boot, creating RESTful APIs to process and analyze EEG/ECG data, utilizing machine learning algorithms to predict driver behavior, and managed efficient data storage and retrieval using Spring Data JPA, Hibernate ORM, and MySQL.
- Ensured secure data transmission and optimized server performance, reducing API response time by 20%.
- Collaborated with cross-functional teams, including data scientists and military experts, to integrate predictive analytics into the system.
- Documented research findings and presented the results of the predictive models to military partners, showcasing the potential application of machine learning in enhancing real-time driver assistance systems.

Software Engineer / Graduate Teaching Assistant Kennesaw State University

Aug 2022 – Dec 2022

- Assisted in the instruction of C++ and Java courses by conducting weekly lab sessions, guiding students through real-world programming challenges and enhancing their understanding of key programming concepts like object-oriented design and data structures.
- Led laboratory sessions where students engaged in hands-on coding tasks, debugged their code, and implemented algorithms, ensuring they applied proper programming techniques and logic.
- Developed and maintained college and university web applications using Java, HTML, CSS, JavaScript, and React.js, improving functionality, user experience, and accessibility across devices to ensure seamless compatibility.
- Implemented backend services using Java and Spring Boot, ensuring seamless communication between the website's frontend and

- backend systems while optimizing performance.
- Utilized version control systems like Git to track project changes and facilitate collaboration, ensuring a smooth development process and effective teamwork.

Software Engineer KPMG

**July 2021 – July 2022
India**

- Engineered and maintained full-stack web applications using Java and Spring Boot, implementing backend services and optimizing data flow between applications and databases for efficient high-volume transaction handling.
- Applied object-oriented programming (OOP) principles in designing scalable, maintainable, and efficient Java applications, leading to reduced code complexity and improved software performance.
- Streamlined UI development with Angular's two-way data binding, crafting user-friendly interfaces that enhanced responsiveness and ensured compatibility across multiple devices and browsers.
- Built and optimized ETL pipelines using Java to improve data extraction, transformation, and loading efficiency, significantly reducing processing times and enhancing data accuracy across systems.
- Constructed RESTful APIs with Node.js and Express.js, integrating third-party services to facilitate high-performance communication between front-end and back-end systems while applying object-oriented programming (OOP) principles for maintainable and scalable application design.
- Administered MySQL databases, optimizing complex queries and indexing to enhance overall system performance and reduce execution times, while orchestrating AWS deployments using EC2, S3, and RDS for scalable infrastructure management.
- Directed development efforts using Agile methodologies (Scrum), collaborating with cross-functional teams to meet project milestones, while automating CI/CD pipelines with Git, Jenkins, and Maven to streamline build, test, and deployment processes.
- Developed and executed automated API tests in Postman to ensure seamless integration and performance of RESTful services, improving defect identification speed and overall application reliability.
- Regularly updated and maintained documentation to reflect system changes and new feature implementations, ensuring accurate and up-to-date references for ongoing development and support.
- Directed development efforts following Agile methodologies (Scrum), collaborating with cross-functional teams to meet project milestones and ensuring the timely delivery of features, enhancing overall team efficiency and productivity.

Software Development Engineer Intern Genpact

**Jan 2021- Jun 2021
Hyderabad, India**

- Developed backend services in Java to manage complex business logic and optimize SQL queries for efficient data retrieval in high-transaction environments, while creating responsive websites using HTML5, CSS3, and TypeScript to enhance user interaction across various devices and improve overall site performance and accessibility.
- Optimized SQL queries and indexing to enhance performance, designed user-friendly web forms for improved usability, and created RESTful APIs for seamless front-end and back-end communication, leveraging Angular CLI to streamline development and boost application performance.
- Performed manual vacuuming on PostgreSQL instances, optimizing database performance by reclaiming memory blocked due to dead tuples, which significantly improved query execution times.

TECHNICAL SKILLS

- **Programming Languages:** C, C++, Java, PHP, JavaScript, Python, TypeScript
- **Web Technologies:** HTML, CSS, Bootstrap, jQuery, AngularJS, React.js, Node.js, Express.js, EJS, Mongo DB, Mongoose, JDBC, Hibernate ORM, Rest API, Spring, Spring MVC, Spring Boot, Spring, Security, JSP, Servlets, Microservices.
- **Software Packages:** Operating Systems, Microsoft Office, Git, GitHub, OAuth2
- **Databases:** Oracle, MySQL, SQL Server, MongoDB.
- **Tools:** JIRA, Bitbucket, Maven, Gradle, ANT, Jenkins, ETL, Postman
- **Design Pattern:** MVC, Singleton, Front Controller, Microservices and DAO patterns.
- **Interested in:** Data Structures and Algorithms, DBMS, OS, OOPS, Web-Technologies, Documentation, Data Governance

PROJECTS

PLANIT

- Developed a Web Application that makes people's lives easier by tracking monthly expenses
- Application Features - Authentication, Graphs for tracking expenses, Tracking individual expenses on different things.
- Login User can add these details to the Profile page.

A Tourist Guide Web Application

- A full-stack web application designed for users to view and tourism places. Users can also upload pictures of their travel to help others and they can even add new tourist camp groups they have visited
- Authorization is also added so that only people who have created the campgrounds can update or delete them
- Web Development Skills used: HTML, CSS, JavaScript, Node.js, Express, Mongo DB

Simon Game

- Simon's game is a game of memory skills. It consists of four colored buttons, each producing a particular tone when pressed. The game creates a series of tones and lights, and the user is required to repeat the sequence to enter the next level.

EDUCATION

Kennesaw State University Georgia, USA
Master of Science in Computer Science

Aug 2022 – July 2023

NIT Raipur Raipur, India
Bachelor of Technology in Information Technology

July 2018 – May 2022
