

CHANDRA KIRAN

+13027091730 • kirankunapareddy37@gmail.com

Summary

Senior Java Developer with 7 years of experience in designing, developing, and implementing full lifecycle web applications using N-Tier J2EE architecture. Proven track record in financial, healthcare, and e-commerce sectors. Key projects include developing RESTful Microservices with Spring Boot and enhancing web applications with AngularJS and ReactJS. Seeking to leverage expertise to drive innovative solutions in a senior development role.

Skills

UI Technologies

- XML, HTML, DHTML, XHTML, HTML5, CSS3, XSLT, JSON, jQuery, JavaScript, ReactJS, BackboneJS, ECMA, AngularJS, Angular 6+, TypeScript, Node.js, AJAX

Frontend Frameworks and Libraries

- React JS, HandlebarJS, Redux, Flux, jQuery, EXT.js, Angular

Backend Technologies

- J2EE (Java 2 Platform, Enterprise Edition), JSP, JDBC, Core Java (Multi-Threading, Exception Handling, Collection API, Data Structures, Regex, Generics, Object-Oriented Programming), Java 8

Web Application Development

- MVC, Responsive Web Design, Agile (XP), Scrum, Unit Testing, Short Iterations

Design Patterns

- Singleton, MVC, DAO, Builder, Business Delegate, Session Façade, Service Locator

Databases

- Oracle, MySQL, MongoDB, Redis, Cassandra, Postgres

Web Services

- RESTful, SOAP, WSDL, UDDI

Testing Frameworks

- JUnit, Jasmine, Karma, Mockito, Protractor

Development Tools

- Eclipse, NetBeans, IntelliJ IDEA, RAD

Web Servers

- WebSphere, WebLogic, JBoss, Tomcat

Version Control

- Git, Bitbucket, SVN, CVS

Technical Stack

- HTML, CSS, JSP, J2EE, SQL, Gradle, Eclipse, MVC, SOAP

Work Experience

CIT Bank

Senior Java Full Stack Developer

Jan 2024 - present

- Designed and implemented scalable microservices architectures using Spring Boot and RESTful APIs, resulting in a 30% increase in application performance.
- Improved data retrieval times by 40% through optimizing complex SQL queries and implementing efficient database indexing strategies in MySQL and PostgreSQL.
- Integrated security protocols such as OAuth2 and JWT for authentication and authorization, ensuring compliance with industry standards like GDPR and OWASP.
- Conducted thorough code reviews and provided mentorship to junior developers, reducing production bugs by 25% and enhancing overall code quality.
- Automated deployment pipelines using Jenkins and Docker, reducing deployment time by 50% and ensuring seamless integration and continuous delivery.
- Developed and maintained front-end components using React JS, optimizing performance and ensuring high-quality, responsive design for web applications.
- Used caching mechanisms such as Redis and optimized thread management, leading to a 20% reduction in server response times.
- Migrated monolithic applications to containerized environments using Docker and Kubernetes, increasing deployment flexibility and system resilience.
- Collaborated closely with backend teams to align React front-end with Java-based APIs.
- Leveraged advanced Java features such as multithreading, lambda expressions, and stream API to improve application concurrency and code readability.
- Designed and implemented scalable, highly available, and fault-tolerant systems using AWS services.

- Experience in designing multi-tier application architecture using AWS, including VPC, EC2, RDS, ELB, and Route 53.
- Configured CloudWatch for monitoring infrastructure metrics and setting up alerts for thresholds.
- Implemented Kafka-based real-time data streaming solutions for banking applications, enabling event-driven processing for transaction monitoring, fraud detection, and customer notifications. Utilized AWS MSK to ensure high availability, data durability, and seamless scaling in compliance with financial industry regulations.

Pluto TV

Senior Java Full Stack Developer

Jan 2023 – Dec 2023

- Participated in the design and development phases of Agile Software Development, contributing to efficient project completion
- Developed Java modules implementing business rules and workflows using Spring Boot, enhancing system functionality and reliability
- Participated in Sprint planning for the estimation of efforts for user stories and bugs, improving project planning accuracy
- Designed and developed the REST based Microservices using Pivotal Cloud Foundry (PCF) platform build upon Spring Boot Services.
- Wrote application-level code to interact with APIs, Web Services using AJAX, JSON, and XML, ensuring seamless data integration and communication
- Used Spring Boot which is radically faster in building cloud Micro Services and develop Spring based application with very less configuration
- Utilized Spring RESTful API to create RESTful Web Services, set JSON data type between front-end and the middle-tier controller
- Designed Single page web applications using AngularJS and deployed into development.
- Used various J2EE design patterns, like DTO, DAO, and Business Delegate, Service Locator, Session Facade, Singleton and Factory patterns with the help of Hibernate ORM.
- Used Spring Core for IOC implemented using DI and developing Restful web services.
- Augmented browser applications using Backbone JS, Node JS, and React JS, improving user interface responsiveness
- Created Microservices using Spring Boot and Spring Core annotations for dependency injection, enhancing the modularity and scalability of REST APIs
- Built Microservices for the Purchase Order module using Spring Cloud, streamlining order processing and delivery
- Leveraged MicroService architecture with Spring Boot, REST, MQ message brokers, and AWS to build, test, and deploy Identity MicroService, improving system reliability and deployment speed
- Designed and developed JSON and XML objects using SQL Server, improving data interchange and storage efficiency

Fannie Mae

Senior Java Full Stack Developer

Nov 2021 - Dec 2022

- Fannie Mae
- Involved in Analysis, Design, Development, System Testing and UAT followed by Agile methodology in the Scrum Cycle model
- Implemented Java features like Lambda parameters, dynamic class file constants, lower head heap profiling and No-op garbage collector
- Created Micro service using spring boot, Gradle and used spring core annotations for dependency injection and Spring MVC for REST API in micro service
- Built Micro services for the populating Transactional data in AU-Validation service using Spring
- Implemented Micro Service architecture with Spring Boot services, using Drools engine to validate client data, resulting in improved data accuracy
- Utilized Micro services with HTTP and REST protocols to implement SOA, enhancing system interoperability and efficiency
- Created JSON Schemas to convert XML files to JAVA Objects for validation, streamlining data processing and validation
- Developed Spring Boot applications with minimal configuration, improving development speed and access logging efficiency
- Utilized Spring framework modules (Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Boot, Spring Microservices, Spring REST, Spring Ribbon, Spring Security) to build robust applications, enhancing system reliability and security
- Utilized Spring Core Annotations for dependency injection and Spring MVC for REST APIs, enhancing application modularity and maintainability
- Developed a system of Spring Boot micro-services using Spring MVC, Spring Cloud Stream, and Spring Data, improving system scalability and performance
- Implemented authentication and database security using Spring Security and OAuth 2.0, enhancing application security and user data protection
- Created Docker images and containers, and integrated them with Spring Boot, streamlining the deployment process and improving application portability
- Implemented authentication, authorization, and access-control features using Spring Security and OAuth 2.0, ensuring secure user access and data protection
- Mapped relationships between tables and entity classes using AWS dependency to access and update information in the Dynamo

database, improving data retrieval efficiency

- Developed API using Spring Boot and tested it with Swagger, documenting endpoints using Open API, which enhanced API reliability and documentation clarity
- Implemented Swagger/Swagger UI to streamline endpoint documentation and deployed scalable, modular software products, improving documentation efficiency and software scalability
- Developed JUnit Test Cases for Unit testing & for Continuous Integration we used Jenkins
- Worked with Maven to implement application using Spring Integrations and Spring Security, enhancing application security and integration
- Implemented Bit Bucket branching strategy for inspection and version control maintenance, improving code quality and collaboration
- Worked on Jenkins for continuous Integration and End-to-End automation for all builds and deployments
- Created pipelines in Jenkins by integrating BitBucket and Maven plug-in, streamlining the build process and ensuring consistent deployments
- Installed and configured Jenkins to support various Java builds and Jenkins plugins, automating continuous builds and publishing Docker images to the Nexus repository, enhancing deployment efficiency
- Used JIRA for tracking defects and updating tickets as work progressed, ensuring timely resolution and better project management
- Developed and maintained applications using Java, Spring Boot, and Spring MVC, ensuring robust performance and scalability. Utilized tools like JIRA for project management and Jenkins for continuous integration, resulting in streamlined development processes. Implemented REST APIs and SOAP services, enhancing system interoperability and data exchange efficiency. Leveraged AWS and Docker for deploying microservices, improving application deployment speed and reliability

CIT Bank

Senior Java Full Stack Developer

Aug 2020 - Oct 2021

- CIT Bank
- Involved in Analysis, Design, Development, System Testing and UAT followed by Agile methodology in the Scrum Cycle model
- Used React JS for templating for faster compilation and developing reusable components
- Involved to implement various screens for the front end using React.js and used various predefined components from node packages and redux library
- Used React.js with RXJS for building rich internet applications, and to optimize in-browser use and to load the module and to improve the Speed and linked the API data to view render virtual DOM dynamically
- Developed React.js / Flux / Redux front-end UI, and Node.js applications for backend and used React.js library and Sass to build out reusable components to create a fully responsive UI layout
- Created Typescript reusable components and services to consume REST API's using Component based architecture provided by React-Redux
- Implemented Java features like Lambda parameters, dynamic class file constants, lower heap profiling and No-op garbage collector
- Used Microservices to communicate using synchronous protocols HTTP and REST for implementing SOA
- Created Restful API to transfer user data securely and performed validation using javascript
- Developed applications using Restful web services and integrated data fields with business logic to map fields, resulting in improved data processing efficiency
- Designed and developed RESTful XML web service endpoints based on business components in Microservices using Spring Framework, handling AJAX requests, which improved data retrieval speed
- Developed RESTful Web Services using Jersey and JAX-RS to perform CRUD operations on the database server over HTTP, facilitating seamless data transfer between different applications
- Used Spring Boot to build cloud Microservices with minimal configuration, resulting in faster application development and improved access logging for Spring Boot applications
- Utilized Spring framework modules such as Spring MVC, IOC, AOP, JDBC, JTA, IO, Spring Boot, Spring Microservices, Spring REST, Spring Eureka, Spring Ribbon, Spring Netflix, Spring Zuul, and Spring Security, leading to streamlined application development with minimal configuration
- Utilized Spring Core Annotations for dependency injection and Spring MVC for REST APIs, enhancing the efficiency of microservices built with Spring Boot
- Developed a system of Spring Boot microservices using Spring MVC, Spring Cloud Stream, and Spring Data, improving system scalability and performance
- Implemented pre-authentication and database security using Spring Security, securing application access and maintaining batch jobs with Spring Batch
- Created Docker images and containers, and integrated them with Spring Boot, streamlining the deployment process
- Implemented authentication, authorization, and access-control features using Spring Security and OAuth 2.0, enhancing application security
- Utilized Hibernate mappings to access and update database information, improving data retrieval efficiency
- Extracted data from secure database using DAO layer and converted it into JSON formats, enhancing data processing for Kafka streams
- Implemented Apache Kafka for asynchronous processing, improving system scalability and reliability

- Designed and developed DAO layer with Hibernate3.0 standards to access IBM DB2 database, creating Object-Relational Mappings and writing PL/SQL procedures, which improved data access efficiency
- Utilized MongoDB for data storage, implementing replica sets and clever document design to enhance service scalability and feature extensibility
- Developed API using Spring Boot and tested endpoints with Swagger, improving API documentation and usability
- Implemented Swagger/Swagger UI for endpoint documentation, enhancing software product deployment and availability
- Developed JUnit Test Cases for Unit testing & for Continuous Integration we used Jenkins
- Utilized Maven for web design and application implementation with Spring Integrations/Spring Security, enhancing project efficiency
- Used Git/GitHub branching strategy for inspection and version control maintenance
- Worked on Jenkins for continuous Integration and End-to-End automation for all builds and deployments
- Created pipeline in Jenkins by integrating GIT and Maven plug-in
- Installed and configured Jenkins to automate continuous builds and publish Docker images to the Nexus repository, enhancing build efficiency and consistency
- Involved in development of test environment on Docker containers and worked in configuring the Docker containers using Kubernetes for smoother deployment process
- Created deployment pipelines in Spinnaker and deployed docker images on Kubernetes
- Deployed and managed VMs on Azure VMware, ensuring seamless integration and high availability for cloud-based applications
- Tracked and updated defects using JIRA, improving workflow efficiency and ensuring timely resolution of issues
- Utilized a diverse technical stack including Java, JIRA, Hibernate, and Spring Boot to develop and maintain robust applications, enhancing system performance and reliability

Magellan Health

Senior Java Full Stack Developer

Aug 2019 - Aug 2020

- Worked in Agile/ Scrum methodology which had daily scrum and a sprint of fourteen days
- Implemented complex forms using Angular Reactive forms and Form Builder, improving form validation and user data accuracy
- Developed CSS-based animations in AngularJS for new client requirements, enhancing user experience and interface appeal
- Created Angular components like controllers, services, directives, and forms to collect user data, improving data collection and validation processes
- Utilized Angular 6 to facilitate communication between components using Observable & Subject, and with the server, enhancing data display on the UI
- Developed both front-end and back-end features using Angular frameworks, NodeJS, and PostgreSQL, enhancing application performance and user experience
- Designed and implemented the User Interface using Angular, JavaScript, HTML, CSS/CSS3, SASS, and Bootstrap for responsive design, improving user engagement and accessibility
- Utilized W3C Validator for testing and conducted unit testing with Karma and Jasmine, ensuring code quality and reducing bugs
- Leveraged Java 8 features like Stream API, Time API, Functional Interfaces, Multithreading, and Lambda to optimize application performance and efficiency
- Implemented the application using Spring IOC, Spring MVC Framework, Spring Batch, and Spring Boot, and managed security with Spring Security, ensuring robust and secure application architecture

ETSY

Senior Java Developer

Aug 2018 – July 2019

- Developing Spring MVC, ORM and Hibernate application, created microservices using Spring Boot
- Used JSON for data exchange between application modules along with XML and WS-Security for authenticating the RESTful messages along with encryption and decryption
- Deployed Spring Boot based micro services on Docker containers using Amazon EC2 and used Docker Hub for registering the Docker images
- Developed the Web application using MVC patterns with Spring Framework along with Spring boot and Spring scheduler
- Coded to implement AJAX based application by fetching the response from back-end REST API as a part of JSON
- Used spring boot Actuator to externalize application's configuration properties for different environments
- Developed a server-side application to interact with the database using spring boot and Hibernate
- Implemented persistence using Hibernate that uses the POJOs to represent persistence database tuples
- Designed and developed the End Points, Business Layer, DAO Layer using Hibernate/JDBC template, using Spring IOC
- Used JWT mechanism for authentication and authorization security configurations using Node JS
- Implemented RabbitMQ for provisioning using the Spring JMS Listeners to parse the XML message
- Ran Log aggregations, website Activity tracking and commit log for distributed system using Apache Kafka
- Used JDBC driver to connect to the Oracle database for all data transactions, mapped them to service layer

- Worked on writing SQL queries for PostgreSQL databases to build PL/SQL functions, store procedure, triggers, and views and materialized views
- Used Atlassian Jira tool for the development, creating the stories, spikes, updating the tasks and reporting the bugs
- Proficient in writing java unit test cases using Junit and TestNG and configuring project dependencies Maven
- Used Postman to test the RESTful API for HTTP requests such as GET, POST, and PUT
- Developed REST service documentation using Swagger UI and developed test cases using Junit and Mockito framework
- Used GitHub as Version Control System for maintaining source code and to store and retrieve the Source Code
- Experienced in the functional usage and deployment of web applications in Apache Tomcat and JBoss
- Worked on spinning up AWS EC2 instances, Creating IAM Users and Roles, Creating Auto Scaling groups, Load balancers and monitoring through Cloud Watch for the applications, S3 buckets, VPC etc
- Worked on the AWS cloud environment and frequently used some of their services such as CloudWatch, X-ray, API Gateway

Education

Wilmington University

Master of Science

-
