EDUCATION

San Diego State University

Bachelor of Science in Computer Science

Spring 2025

Honors: Cum Laude

WORK EXPERIENCE

General Atomics

San Diego, CA

Software Engineer Intern

June 2024 – April 2025

- Reduced server costs by ~\$3K annually and simplified maintenance by consolidating two external FileMaker Pro servers into one centralized server and optimizing data retrieval with SQL queries
- Developed a FileMaker Pro work order page using SQL queries to automate order workflows and eliminating ~10 hours of manual preparation for weekly QA reviews
- Collaborated with an engineer to build a SQL-driven tracking system to log order updates, capture late-order reasons, and generate summarized insights for lab management
- Developed a full-stack dashboard in FileMaker Pro that generated JSON data for Google Charts to visualize quarterly order metrics, reducing ~10 hours of manual Excel work per cycle
- Led a project by coordinating weekly meetings with lab head technicians and upper management to provide progress updates and gather evolving system requirements for the project

PERSONAL PROJECTS

Full Stack Netflix Clone

- Developed a RESTful backend with Node.js, Express.js, MongoDB, and JWT to implement secure authentication, managing API routing, and handling user data
- Built a responsive React.js frontend using React Router and Axios for content browsing, search, recommendations, and trailer playback
- Created and implemented a responsive UI to showcase movie and TV show data, including trailers and similar content recommendations

AI-Driven Facial Detection System

- Utilized TensorFlow with a VGG16-based model for classification and bounding box regression, alongside OpenCV, to build a real-time AI facial detection system
- Designed and implemented a data collection system using LabelMe to capture and label frames, creating an annotated dataset to improve face detection accuracy
- Optimized model performance using Adam optimizer with learning rate decay, guided by TensorBoard visualizations to improve training and real-time face detection accuracy

Interactive Facial Recognition Platform

- Built a containerized React app using the DeepFace AI library for facial recognition, ensuring consistent cross-platform performance with Docker
- Implemented a React component to upload user images, invoke a facial analysis API, and display extracted traits on the webpage
- Developed an autonomous Python function to query an image similarity API, retrieve face matches, and sort results from highest to lowest similarity

Technical Skills

Programming Languages: Python, Java, C++, JavaScript, SQL

Frameworks: Node.js, React.js

Tools: Git, Docker, FileMaker Pro
