

Data Analyst | Data Analytics Engineer

Professional Summary

Data Analyst and Analytics Engineer with 4+ years of experience supporting financial and healthcare reporting through SQL-driven analysis, KPI development and dashboard design. Experienced in working with large datasets to deliver audit-ready insights for compliance, risk and operational teams. Strong expertise in Python, Snowflake, Azure Synapse, Power BI and Tableau.

Technical Skills

Programming & Querying	Python, SQL
Data Analytics & Reporting	KPI reporting, data cleaning, data validation & reconciliation, data profiling, exploratory analysis, invoice & usage analysis
Analytics & Visualization	Tableau, Power BI
Data Modeling	Snowflake, Azure Synapse Analytics, Amazon Redshift (exposure), analytics-focused data modeling
Databases	SQL Server, PostgreSQL, MySQL, Oracle
Big Data	PySpark (data prep)
Tools	Microsoft Excel, Git, GitLab, Jira

Professional Experience

Community Bank NA | Remote
Data Analytics Engineer

Mar 2025 to Present

Responsibilities:

- Designed and maintained SQL-based transformation logic in Snowflake and Azure Synapse to standardize financial and regulatory reporting datasets across compliance and risk teams.
- Developed analytics-ready data models and reusable SQL views to support scalable KPI reporting and reduce ad hoc query duplication.
- Optimized complex queries on multi-million-row financial datasets using CTE restructuring, aggregation strategies and performance-aware filtering.
- Performed ad hoc and exploratory analysis to support executive reporting, anomaly investigations, and strategic initiatives.
- Identified data quality issues and reconciliation gaps, improving reporting accuracy by ~20–30% through validation checks and root-cause analysis.
- Partnered with finance, compliance and engineering teams to gather reporting requirements and translate them into structured data transformation workflows.
- Built and supported 15+ Power BI dashboards consuming curated warehouse datasets for executive and operational reporting.
- Used Python to automate data validation and profiling tasks, reducing analysis turnaround time by ~25%.

Environment:

SQL, Snowflake, Azure Synapse, dbt, Python (analytics & automation), Power BI, Excel

Civica | Remote
Data Analyst

Jan 2024 to Mar 2025

Responsibilities:

- Worked with healthcare-related datasets to prepare analysis-ready data prior to project execution, ensuring accuracy, consistency, and completeness.
- Collected, cleaned, and organized invoice and operational data from multiple sources using Excel, SQL, and Python to support downstream analytics and reporting.
- Performed data validation and reconciliation to identify discrepancies and ensure reliable inputs for healthcare reporting use cases.
- Developed and maintained Tableau dashboards and visualizations to support stakeholder review of costs, trends, and operational metrics.
- Wrote SQL queries and performed light transformations in Snowflake to prepare curated datasets for reporting and ad hoc analysis.
- Collaborated with project teams to understand data requirements, define data readiness criteria, and ensure datasets met project standards before analysis began.

Environment:

SQL, Excel, Tableau, Python, Snowflake

Cigniti Technologies | India
Junior Data Analyst

Jan 2021 to Dec 2022

Responsibilities:

- Assisted analytics teams by preparing, cleaning, and organizing structured datasets before reporting and dashboard development.
- Cleaned and standardized data using SQL and Excel to ensure consistency across reports.
- Developed SQL queries to extract, validate, and prepare datasets used in recurring reports and visualizations.
- Performed data quality checks and basic reconciliation, identifying missing values and inconsistencies impacting reporting accuracy.
- Supported Tableau dashboards by providing clean, well-structured datasets for visualization and analysis.
- Conducted basic exploratory analysis to identify trends and anomalies prior to reporting.
- Collaborated with senior analysts and cross-functional teams to understand data requirements and resolve reporting discrepancies.

Environment:

SQL, Excel, Redshift, Tableau, SQL Server, Jira.

Education

- **Master of Science in Information Technology | Clark University** **May 2024**
Relevant Coursework: Data Mining, Business Intelligence, Database Management Systems
- **Bachelor of Technology in Electronics and Communication Engineering | JNTUH** **Jul 2022**

Certifications

- SQL Certification - Udemy
- Python Certification - Netrich IT Solutions

Online Training and Simulations

- Accenture North America – Data Analytics and Visualization
- BCG – GenAI Simulation
- Mastercard – Cybersecurity Simulation
- Accenture North America – Project Management Simulation
