SUMMARY

Full-stack engineer with expertise in systems design and scalable architecture. Currently at a private-markets indexing firm, where I designed a foundational data model and built a high-throughput ETL pipeline powering multi-year regulatory analytics. Previously founding engineer at FinUnity, built an AI-driven personal finance platform that won \$11K in prizes in a fintech competition. Top 0.1% on CodeChef; 98.2 percentile in IIT-JEE. Seeking Full-Time Engineer roles to build user-focused systems and drive impactful innovation.

EXPERIENCE

Software Engineer

The Kernel LLC.

October 2025 - Current

Greater Hartford, CT

- Architected foundational data model and PostgreSQL warehouse, ingesting 10,000+ Regulation Crowdfunding and Regulation A filings to enable comprehensive regulatory analysis.
- Modeled multi-year funding histories for 50,000+ rounds to support index research and backtesting.
- Engineered a queue-based bulk-write pipeline, reducing database writes by 40% and enhancing system stability by preventing storage crashes.

Founding Engineer

FinUnity

February 2025 - October 2025

Greater Boston, MA

- Engineered a credit-card payment optimizer engine and AI-powered micro-payment engine that not only balanced future interest reduction but also ensured **optimal credit utilization** and other credit health aspects.
- Directed migration from browser local storage to a dual-tier embedded database, reducing data-fetch response time by 60% (500ms to 200ms) and ensuring seamless offline-sync reliability for users.

Software Engineering Intern

Xylem Inc.

June 2023 - August 2023

Greater Hartford, CT

- Developed a Java Spring Boot backend for a file handling system, reducing processing time for large files by 25% and enhancing system efficiency for file uploads and manipulation.
- Developed a feature enhancing system capabilities to support multiple data profiles stored in sonar devices and empowered clients to generate **XML files from metadata on-demand, using C++-17**.

Back-End Engineering Virtual Experience Program

Lyft

May 2023 - June 2023

Remote

- Refactored Python-based rental fleet backend services using the Factory Design Pattern, significantly enhancing code modularity and streamlining future modifications for improved developer productivity & system maintainability.

EDUCATION

Bachelor of Science in Computer Science, Springfield College

May 2025

Bachelor of Technology in Computer Science, Indian Institute of Technology(IIT), Guwahati

PROJECTS

Resume Wizard Engineered a structured-prompt LLM pipeline to score resumes and generate targeted rewrites in strict JSON, with schema guardrails + evidence/path grounding + hallucination-resistant constraints to keep outputs tied to source sections. Optimized quality and latency through token budgeting, prompt modularization for each tasks, and similarity-based de-duplication, cutting redundant generations and stabilizing outputs across reruns. Built a human-in-the-loop accept/dismiss workflow and a lightweight prompt eval harness to iteratively tune for ATS keyword alignment, clarity, and impact.

SKILLS

Language

Python, Java, JavaScript, Shell, C++, GoLang, SQL, HTML, CSS

Technologies

React, Vue.js, Rest API, AWS, Vector Database, Semantic Search, RAG, LLM, Deep Learning
