### PROFESSIONAL EXPERIENCE

Around 5 years as a Full-Stack Java Developer in IT, I've worked across different sectors like Insurance and Financial Services, actively engaged in the complete software development life cycle (SDLC). My involvement spans from analysis and design to coding, testing, and implementing Java/J2EE applications.

#### Java Intern | RBFCU – Texas, USA

July 2023 – Feb 2024

- Designed and developed microservices architecture using Java and Spring Boot, ensuring scalability and modularity.
- Spearhead the development of microservices-based applications using Java Spring Boot, resulting in improved scalability and maintainability.
- Created robust, secure, and high-performance RESTful APIs to facilitate communication between microservices.
- Implemented responsive and user-friendly interfaces using React components, ensuring a seamless user experience.
- Implemented RESTful APIs, leveraging Spring Boot's features for rapid development and deployment.
- Integrated Datadog for monitoring and performance optimization, proactively identifying and resolving issues.
- Proficient in containerizing applications using Docker, creating Dockerfiles and Docker Compose configurations for defining container environments.
- Participated in code reviews and conducted performance tuning to optimize application performance.
- Implemented Authentication protocols including SAML, OAuth 2.0, and OpenID Connect.
- Took ownership of complex technical issues that span across multiple teams, leading them to resolution.
- Providing expertise and actively participating in collaborative problem-solving, offering thoughtful feedback during peer design and code reviews. Built Java-based plugins or modules to enhance WordPress websites with custom features or integrations not achievable with standard WordPress plugins or themes.
- Utilized state management libraries such as Redux for efficient data handling and consistency across the application.
- Contributing across the entire Software Development Life Cycle (SDLC) by designing, implementing, testing, and deploying new features for our platform.

Tech stack: MongoDB, React JS, Angular 15, Node JS, Proxy Server, Promises, Express. JS, REST, AWS Cloud, HTML5, CSS3, JavaScript, jQuery, Jasmine, Mocha, TypeScript, JSON, XML, AJAX, SOAP, RESTFUL, Java, MySQL.

#### Software Developer | Atos – Bangalore, India

Dec 2021 – Aug 2022

- Proficient in web technologies like HTML5, CSS, Bootstrap, JavaScript, jQuery and Angular 9, Karma, Jasmine using these frameworks to create efficient, responsive interfaces.
- Implemented core Java concepts like Multi-threading, Collections, Java 1.8, Lambda Expressions, and Migrated all the Dependencies from Java 1.8 to the latest stable versions Java 11+.
- Responsible for developing multiple microservices using java Spring Boot to modularize code and implemented Rest APIs using Spring Rest. Proficiency in API design, crafting specifications, and working with XML/JSON for efficient data exchange.
- Used TypeScript for improvising JavaScript development and also developer experience.
- Proficient in integrating Java applications with WordPress using the WordPress REST API.
- Deployed and managed containerized applications at scale using Kubernetes, including cluster provisioning, deployment, scaling, and monitoring. Configured container networking in Kubernetes, including service discovery, load balancing, and network policies, to ensure secure and efficient communication between microservices.
- Optimized Docker images for size and performance, leveraging multi-stage builds, caching, and layering techniques.
- Developed Ansible playbooks to manage configurations, handle dependencies, and automate the deployment of Java microservices across diverse environments. Familiarity with CyberArk for secure access management, ensuring robust security protocols.

- Proficiency in testing methodologies using tools like Postman and JUnit for comprehensive testing and validation. Experience in utilizing SonarQube for code quality checks and improvements, ensuring adherence to coding standards.
- Proficient database technologies like DDL, DML, Oracle, IMS PostgreSQL and MySQL server, Hadoop, DB2.
- Integrated NoSQL databases with Java applications, libraries like Spring Data for MongoDB.
- Working with No SQL databases, including tasks like data modeling, schema design, CRUD operations, and scalability considerations.
- Experience you have with database management tools such as Oracle SQL Developer, Toad, or SQL Workbench.
- Extensive AWS experience including AWS services such as Event Bridge, SQS, SNS, and Route53, Cloud watch, security group.
- Experience in using Splunk for log monitoring and analysis, ensuring system health and security. Proficiency in Nexus for comprehensive reports on software composition analysis, ensuring code integrity.
- Experience in writing unit test cases using JUnit, Testing, Mockito and Wrote JUnit Test Cases for challenging environments.
- Integrated microservices deployments with CI/CD pipelines using Jenkins, GitLab CI/CD, or CircleCI, automating build, test, and deployment processes. Experience in using GIT and GitHub as version controlling platform. Built java applications using Maven and Gradle
- Application using Agile/scrum process with daily scrum meetings, Backlog Refinements, Demos, sprint planning sessions, and sprint retrospective meetings. Expertise on Linux, Ubuntu, CentOS, Windows.

Tech stack: Java/J2EE, HTML5, CSS, JavaScript, Angular 9, Spring Boot, Microservices, REST APIs, Ansible, CyberArk, R, Postman, SonarQube, PostgreSQL, AWS, Splunk, Kafka, OpenShift, Nexus, CI/CD pipelines, Junit, Mockito, Git, GitHub, Agile, Hoverfly

#### Software Trainee | Indigen Technologies – Hyderabad, India

Aug 2018 - Dec 2021

- Redesign and maintain existing internal web applications utilizing HTML, CSS, JavaScript and JQUERY, Angular JavaScript.
- Developed mock-ups and prototypes using HTML and CSS3.
- Worked on application development using J2EE, Hibernate, Spring Boot, Microservices, HTML5, CSS3 and Web Services.
- Designed, developed, and tested J2EE components like Java Beans, Java, XML, Collection Framework, JSP, Spring and Hibernate, and Perl scripting. Utilized Java frameworks and libraries to enhance the scalability and reliability of WordPress deployments, particularly for high-traffic or enterprise-level websites.
- Implemented Java multi-threading and thread-handling issues during application development.
- Wrote Microservices to export/import data and task scheduling using Spring Boot, spring and hibernate.
- Designed the front-end screens using AngularJS, HTML5, CSS3, JavaScript, jQuery, Bootstrap and Spring Boot. Generated complex SQL queries for data reporting purposes, extracting meaningful insights and presenting information in a clear and concise manner.
- Developed REST controllers using Spring Data REST to serve the UI with required JSON data, Used Web services (SOAP) for transmission of large blocks of XML data over HTTP.
- Designed database and created tables, wrote complex SQL Queries and stored procedures as per the requirements.

Tech stack: Java, Spring Framework, Hibernate, SQL, Oracle, Restful Web Service, HTML5, CSS3, jQuery, JavaScript, JSON, XML, JSP, Java Beans, Perl Scripting, Bootstrap, AngularJS, JMS, JIRA, Log4J, Agile

## TECHNICAL SKILLS

|                  |                                                                                                        |
|------------------|--------------------------------------------------------------------------------------------------------|
| Languages        | Java, Data Structures and Algorithms, C, C++, Python, .NET, Mainframe COBOL, Mainframe Assembler, Ruby |
| Web Technologies | HTML, HTML5, CSS, JavaScript, Boot strap jQuery, REST Service (prior experience), CICS                 |
| Frameworks       | React JS, Spring, Node JS, Spring Boot, Django, Hibernate, Junit, Angular9, Redux, typescript          |

|                       |                                                                                                          |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| Databases             | SQL, Oracle DB, MongoDB, Hadoop, DDL, DML, MYSQL server                                                  |
| Cloud Technologies    | API Gateway, Cloud Formation, AWS Lambda S3, Dynamo DB, Microsoft Azure                                  |
| Tools                 | Eclipse IDE, JIRA, Splunk, ETL tool, IntelliJ, Jenkins, Maven, Kubernetes, Docker, Kafka, visual studio, |
| Version Control tools | Git, GitHub                                                                                              |
| Methodologies         | Agile, SDLC, Object Oriented Analysis and Design                                                         |

## ACADEMIC PROJECTS

---

### Utilization Management Software | Java, REST, Jenkins, AWS | Master's Project

Developed a Real-time software which was utilized by providers, medical reviewers to assess primary care physicians. I integrated the application with AWS services such as Cognito and SAML IDP, allowing the company to leverage their enterprise login system (ADP) for seamless access. I implemented monitoring systems like CloudWatch, established deployment pipelines using Jenkins CI/CD on the AWS cloud, and predominantly utilized Spring Boot alongside various AWS services. The system also seamlessly interacted with other microservices, employing tools like SQS for distributed services, passing information, and notifying third-party vendors through notification services.

## EDUCATION

Master's in computer science | SACRED HEART UNIVERSITY      Sep 2022-Dec 2023    Bachelor  
of Technology | Acharya Nagarjuna University      Aug 2014 – Apr 2018
