

Ganesh Eijjada

Java Full Stack Developer

+1 (573) 519-8777 ✉ eijjadaganeshvenkata@gmail.com [LinkedIn](#)

Professional Summary

- Java Full Stack Developer with over 5 years of experience in designing, developing, and deploying scalable, high-performance web applications across diverse industries.
- Proficient in Java, Spring Boot, and Hibernate, with expertise in building secure and efficient RESTful APIs and implementing robust microservices architectures.
- Skilled in modern front-end development using React.js, Angular, and TypeScript, ensuring seamless user experiences and responsive designs.
- Extensive experience with cloud platforms like AWS, Azure, and GCP, leveraging services such as EC2, S3, Lambda, and DynamoDB to optimize performance and reduce costs.
- Strong expertise in event-driven architecture using Apache Kafka and database management with MySQL, PostgreSQL, MongoDB, and Redis, ensuring efficient data processing and real-time analytics.
- Adept in DevOps tools such as Docker, Kubernetes, Jenkins, and OpenShift, with a proven track record of automating CI/CD pipelines and enhancing system reliability.
- A collaborative team player with excellent problem-solving skills, experienced in Agile methodologies, code reviews, and mentoring junior developers to deliver high-quality software aligned with business objectives.

Skills

Programming Languages: Java, Python, JavaScript, TypeScript, SQL, PL/SQL, C++.

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Node.js, React.js, Angular, Express.js, Redux, Bootstrap.

Web Technologies: HTML5, CSS3, RESTful APIs, GraphQL, jQuery, JSON, JSP, Servlets, WebSocket.

Message Queues & Event Streaming: Apache Kafka, RabbitMQ.

Database Management: MySQL, PostgreSQL, MongoDB, Oracle, Cassandra, Redis.

Cloud Platforms: AWS (EC2, S3, Lambda, RDS, DynamoDB), Azure, Google Cloud Platform (GCP).

DevOps & CI/CD: Docker, Kubernetes, Jenkins, GitLab CI/CD, OpenShift, Maven, Ansible, Bamboo.

Version Control: Git, GitHub, Bitbucket, SVN.

Testing Tools: JUnit, Mockito, Selenium, TestNG, Cucumber, Postman, REST Assured, JMeter.

Logging & Monitoring: Log4J, Splunk, New Relic, Prometheus, Grafana.

Development Methodologies: Agile (Scrum, Kanban), Waterfall.

Work Experience

Intuit

January 2024 – Present

Java Full Stack Developer

Washington, USA

- Designed and developed scalable microservices architecture using Spring Boot, Spring MVC, and Hibernate, improving system efficiency by 30%.
- Built responsive front-end components using React.js, Redux, and Material-UI, enhancing the user experience across multiple platforms.
- Developed and integrated secure RESTful APIs for third-party payment systems, ensuring seamless and reliable transactions for millions of users.
- Migrated legacy monolithic applications to a microservices-based architecture on AWS, utilizing EC2, S3, Lambda, and RDS, reducing operational costs by 25%.
- Implemented event-driven architectures using Apache Kafka for processing real-time data streams, improving system responsiveness.
- Enhanced CI/CD pipelines with Jenkins, Docker, and Kubernetes, reducing deployment time by 40% and improving delivery efficiency.
- Led Agile development teams, participating in sprint planning, backlog refinement, and delivering features on time, improving project delivery speed.
- Debugged and monitored production issues in real-time using Splunk, Prometheus, and Grafana, reducing downtime by 50%.

Groovy Web

April 2020 – July 2022

Java Full Stack Developer

India

- Developed dynamic web applications for small-to-medium enterprises using Spring Boot, Spring Security, and Angular.js, increasing client engagement by 35%.
- Designed role-based access control systems and secure authentication workflows with JWT and OAuth 2.0, enhancing application security.
- Migrated monolithic applications to microservices architecture, enabling better scalability and maintainability.
- Created REST APIs and integrated them with responsive front-end applications using React.js, reducing development time.
- Automated testing workflows using JUnit, Mockito, and Selenium, improving code quality and reducing bug resolution time by 25%.
- Built real-time data visualization dashboards using Chart.js and integrated analytics reporting APIs for improved decision-making.
- Established streamlined version control processes using Git and Bitbucket, reducing merge conflicts by 15%.
- Conducted code reviews and mentored junior developers, ensuring adherence to clean code principles and design patterns.

Capgemini

November 2017 – March 2020

Java Full Stack Developer

Bangalore, India

- Developed a scalable web application using Java, Spring MVC, and Oracle databases, reducing warranty costs by 25% and improving recourse volume by 20%.
- Implemented Spring ORM and transaction APIs for efficient database management, reducing application response times by 15%.
- Utilized advanced Java 8 features like parallel streams, lambda expressions, and functional interfaces to enhance code efficiency.
- Documented workflows and technical knowledge for new hires, reducing onboarding time by 50%.
- Built an Angular 7 based front-end application and utilized Apache Kafka for microservices communication, improving order processing time.
- Automated deployment processes using OpenShift, Docker, and Kubernetes, saving over 100 hours annually in manual deployment efforts.
- Implemented logging and monitoring solutions with Prometheus and Grafana, saving 35 hours per month in debugging.
- Engineered a system to analyze customer order history using SQL and created data visualization dashboards in Tableau, reducing data processing time.
- Designed intelligent configuration algorithms to generate customer recommendations, enhancing personalization and boosting sales by 15%.

Education

Southeast Missouri State University

August 2022 – May 2024

Master of Science in Computer Science

Cape Girardeau, MO
