SUMMARY

A Cloud Engineer with 3+ years of experience with strong background as a cloud infrastructure specialist, skilled in AWS and Azure, focusing on automation, Infrastructure as Code (IaC), and containerization. Experienced in developing CI/CD pipelines using Python and Node.js, and certified as an AWS Solutions Architect-Associate. Successfully implemented automation scripts and workflows to enhance product resilience and efficiency. Eager to leverage expertise in cloud technologies and automation to drive operational excellence in a DevOps role.

SKILLS

- **Cloud Infrastructure:** AWS (Serverless, Microservices, CloudFormation, CodeCommit, CodePipeline, CodeDeploy, IAM)
- **Technical Skills:** Node.js, Docker, Kubernetes, AWS, CI/CD, CloudFormation, Terraform, Ansible, Jenkins, Git, Linux Administration, Java script
- **CI/CD Tools:** Jenkins, Ansible, Terraform
- **Containerization:** Docker, Kubernetes
- **Cloud Platforms:** AWS, Azure, Google Cloud Platform
- **Infrastructure as Code (iCA):** CloudFormation, Terraform, Ansible
- **Version Control Systems:** Git
- **Soft Skills:** Problem-solving, Collaboration, Communication, Adaptability, Continuous Improvement
- **Programming Languages:** Python, Shell Scripting

CERTIFICATIONS

- **AWS Solutions Architect - Associate:** AWS
- **SQL Basic:** HackerRank
- **Python3:** Google Certification
- **Software Engineering Virtual Experience:** JP Morgan Chase & Co
- **Cybersecurity Virtual Experience:** Mastercard
- **Introduction to Cybersecurity Tools and Cyber Attacks:** IBM-Coursera

EDUCATION

University of North Carolina, USA, Charlotte

Master of Science, Information Technology

Christ University, India, Bangalore

Bachelor of Technology, Electronic and Communication Engineering

WORK EXPERIENCE

Verizon

Oct 2024 - Present

Cloud Platform Engineer Job Simulation on Forage

USA(Remote)

- Developed a comprehensive understanding of Cloud Computing Engineer responsibilities at Verizon, which improved the management of cloud applications and enhanced collaboration on high-priority projects
- Gained experience in Agile methodology, enhancing collaboration skills and adaptability to project changes, which led to improved project efficiency and outcomes.
- Acquired knowledge of essential traits of cloud-native applications, such as redundancy and resiliency, which ensured stability and security within cloud environments
- Interacted with and tested cloud applications using a Python program, gaining practical experience in automation and validation, vital for maintaining project quality.
- Developed the ability to present test findings clearly and effectively, ensuring insights are communicated to team members and stakeholders for informed decision-making.
- Recognized the importance of network, application, and data security, contributing to the safeguarding of cloud applications against potential threats and vulnerabilities
- Enhanced the ability to conduct research into technical subjects and compile findings into comprehensive PowerPoint presentations, fostering knowledge sharing and collaborative learning within the team.
-

Nexus software Limited

Mar 2020 - Jul 2023

Cloud Engineer

India

- Analyzed the company's cloud computing strategy and provided AWS-based solutions, improving system efficiency and reducing operational costs.

- Completed comprehensive AWS Skill Builder courses, gaining hands-on experience with AWS EC2, Amazon Lex, AWS Lambda, Amazon CloudWatch, and Amazon Cognito, which enhanced my ability to manage cloud services effectively.
- Enhanced product resilience by focusing on automation and monitoring within cloud infrastructure, aligning with best practices in site reliability.
- Collaborated with data teams to design, develop, and maintain data pipelines for efficient data ingestion, processing, and transformation.
- Designed and developed scalable software solutions using Python and JavaScript, optimizing data processing pipelines and ensuring system reliability on AWS.
- Led architecture design for distributed cloud-based systems using AWS services, including IAM, RDS, S3, and EC2, resulting in a 25% improvement in performance and cost efficiency.
- Implemented DevOps practices with Docker and Kubernetes, automating deployment processes and improving the CI/CD pipeline, reducing deployment time by 30%.
- Developed RESTful APIs using FastAPI and Django, implementing stateless and stateful services to support high-traffic web applications.

PROJECTS

Portfolio project using AWS S3 Buckets and Terraform

- I created a robust and scalable portfolio website leveraging the power of AWS S3 and Terraform.
- By employing Terraform's infrastructure as code capabilities, I defined the entire S3 bucket configuration, including versioning, access controls, and website hosting settings, within a declarative script.
- This approach ensured consistency and repeatability in the deployment process.
- To populate the website, I meticulously organized my portfolio content (HTML, CSS, images) and uploaded it to the designated S3 bucket. By configuring appropriate bucket policies, I established secure access and cross-origin resource sharing for optimal website performance.

Cloud-Based Data Processing Pipeline

- Designed and implemented a cloud-based data processing pipeline using Python and AWS services (Redshift, S3, RDS), resulting in a 30% reduction in data processing time and improving overall system efficiency.

Containerized Microservices on Kubernetes

- Deployed microservices architecture using Docker and Kubernetes to orchestrate and scale applications.
- Automated scaling based on traffic demands, ensuring optimal performance with 99.9% uptime.

Online Food ordering system

- Designed and executed a comprehensive online food ordering system using Python, Django, HTML, CSS, and JavaScript.
- Spearheaded the development of an intuitive interface enabling users to register, select food items, modify orders, and securely process payments through integrated gateways.
- Ensured data integrity by implementing and managing the database structure using SQLite3.
- Engaged in collaborative efforts with cross-functional teams, successfully deploying the system and conducting thorough testing for optimal functionality.
- The project underscores a proficiency in full-stack development, effective problem-solving, and a dedication to delivering a seamless and secure online ordering experience.

Location based reminder using Kotlin and XML

- Using the Fused Location Provider API, customers can utilize a location-based reminder app in Kotlin and XML to create tasks based on their actual position.
- The application creates virtual areas known as geofences, tracks users' locations, and notifies users when they enter a specified geofence.
- Check out the location-based reminders course project on Udacity for additional details.
