

# Mithandra J Stockley

[mstockle@gmail.com](mailto:mstockle@gmail.com) • 401-267-8389 • West Warwick, RI 02893 • *she/her*

Bug hunter, schema wrangler, query optimizer, tool smith, data sleuth, knowledge sponge. Lover of Emacs, sed, and all creatures feathered or furry. In my free time, I like to tame wayward websites with Violentmonkey scripts while watching the wildlife visit my feeders.

---

## SKILLS

- **Code:** Perl 5.14.2, JavaScript/ES5+, AJAX, jQuery, CSS 2+, HTML 4+, Bash
- **Database:** MySQL 5.0+, SQLite, Elasticsearch
- **Environment:** Linux (Debian Etch), Windows XP/7/10, Apache, CVS, Redmine
- **Past or limited experience with:** Python, NGINX, Plack, PostgreSQL, GIT, PHP5, Java (J2SE)

---

## EDUCATION

**Williams College**, Williamstown, MA.

- Bachelor of Arts in Computer Science, 2003.

---

## EXPERIENCE

**Intricity**, New York, NY.

- Data Engineer. *July 2023 - July 2024*
  - ▶ Maintained and produced Perl scripts with custom JSON configurations used by customers to convert Big Data workflows between various technologies.

**The Conference Exchange (Confex)**, Cumberland, RI.

- Senior Software Engineer / DevOps Specialist. *July 2011 - December 2022*
  - ▶ Reviewed code written by other developers for logical correctness and adherence to company coding standards prior to application in production systems.
  - ▶ Instructed junior developers in programming methodologies and best practices, with emphasis on efficiency, clarity, and reusability.
  - ▶ Performed detailed research of database transaction and web access logs to determine causality of otherwise unexplained user-generated errors.
  - ▶ Created and updated existing shell and Perl scripts to encapsulate and streamline common developer and systems workflows, including:
    - ♦ *mysqlhumanlog* : Perl wrapper around MySQL's standard *mysqlbinlog* utility to make row-formatted binary logs more human-readable by converting to statements with column names and enum values as existed in schema at time of logging.
    - ♦ *nginx2db* : Multi-component tool run nightly to import NGINX access logs into MySQL database for ease of searching and analyzing user activity.
    - ♦ *uri2module* : Perl script for determining which shared or client-specific Perl module handled given requested URI for easier debugging of errors in absence of stack trace.
  - ▶ Tackled major projects for modernizing internal and outward-facing systems, including:
    - ♦ *tm2rm* : Imported data from home-grown task management system into Redmine via API, with care to replicate users, issues, and comments as if originally created in target system.
    - ♦ *ep/2tt* : Created Perl command-line utility with web interface for rewriting Embperl template files to be parsable by Template Toolkit 2, to facilitate conversion by front- and back-end developers of thousands of individual templates.

*cont'd.*

- Assistant Database Administrator. *July 2009 - December 2022*
  - ▶ Reviewed and applied daily patches to database schemas as required for functionality updates.
  - ▶ Reviewed and optimized complex MySQL queries for staff/client data reporting.
  - ▶ Performed detailed research of database transaction history to reconcile data discrepancies.
- Assistant Systems Administrator. *March 2009 - January 2012*
  - ▶ Performed triage of anomalous behavior of multiple internal and production web and database servers, directly handling minor issues with proprietary tools.
  - ▶ Configured and deployed new client accounts for immediate use.
- Web Application Developer. *February 2007 - December 2022*
  - ▶ Worked independently and with development team to maintain and add functionality to proprietary online conference content system, utilizing object-oriented Perl, AJAX, and MySQL.
  - ▶ Directly assisted Customer Support staff with configuring and troubleshooting various components of online system.

**The Search Agency (TSA), East Greenwich, RI.**

- Software Engineer. *July 2004 - January 2007*
  - ▶ First developer hired into growing SEM/SEO firm.
  - ▶ Rearchitected company website from graphical template.
  - ▶ Implemented several new components of proprietary bid management web interface used by both Account Managers and clients, utilizing PHP, AJAX, and advanced MySQL (multi-table joins, triggers, query optimization).
  - ▶ Diagnosed and fixed bugs as they arose in both PHP front end and Java back end.
  - ▶ Created and utilized new tool for data QA.
  - ▶ Assisted CTO with daily data collection and discrepancy resolution process, involving complex shell scripts.
  - ▶ Educated and coached new engineers in "TSA Way" of software development.

**Williams College Department of History, Williamstown, MA.**

- Web Designer/Developer. *November 2002 - August 2003*
  - ▶ Updated Department web site.
  - ▶ Redesigned course listings to automatically update from Registrar's Office data, using Perl script to parse free-form file.

**Williams College Department of Security, Williamstown, MA.**

- Web Designer/Developer. *June 2002 - August 2003*
  - ▶ Redesigned Department web site.
  - ▶ Designed and implemented online party/event registration form in PHP.
  - ▶ Developed data storage and automated parking space assignment system in Perl without aid of database; reimplemented online vehicle registration form in PHP to work with new system.
