
"Data Analyst, Power BI/Tableau, SQL, T - SQL/PL SQL, Python, SSIS, Excel, Big Data Hadoop "

OBJECTIVE

Over 4 years of experience as Sr. Data Analyst, Power BI/Tableau Developer eager to contribute to team success through hard work, attention to detail, and excellent organizational skills. Clear understanding and working experience in data visualization, business reporting & dashboards, data management, data governance, ETL (extract, transform, load), and data analytics.

PROFESSIONAL SUMMARY

-  Experience in gathering Requirements, Analysis, Design, Development, Deployment, Testing, and Support of rich Interactive Dashboards and Workbooks using Power BI and Tableau Desktop.
-  Experience in Performance Tuning of reports within Power BI and Tableau Dashboards.
-  Conducted Analysis and created Use Cases, Workflows, screenshots, and Power BI/Tableau PowerPoint presentations in the Client Web Applications.
-  Represented data using the Cross Tabs, Scatter Plots, Geographic Maps, Pie Charts, Bar Charts, Heat Maps, and Tree Maps.
-  Experience in audience profile analysis that includes the demographics, geographies and interest category segmentations.
-  Experience in writing SQL, T - SQL/PL SQL (Stored Procedures, Functions, and triggers) scripts for reporting, data analysis, ETL validations, and supporting Ad-hoc business requests.
-  Proficient in data mining tools like R, SAS, Python, SQL, Excel, and Big Data Hadoop ecosystems Staff leadership and development.
-  Creation and execution of Synchronization statements and Checkpoints in Automation testing.
-  Analyze the effectiveness of the current systems and procedures applied in the organization toward achieving long-term and short-term goals.
-  Involved in user segmentation reports generation.
-  Collaborated with business users in determining various data, reporting, and dashboard requirements and developing the same.
-  Designed and developed Power BI/Xcelsius dashboards.
-  Expertise in Manual/Functional Testing, Automation Testing.
-  Specialized in analyzing Functional/Technical specifications and writing Test plans, Test Scripts, assessing and documenting the actual results against the expected results, creation of test data and automation of test cases.
-  Proficient at translating strategic IT user requirements into specific database capabilities.
-  Strong experience in business and data analysis, profiling, migration, conversion, quality, integration, metadata management services, and configuration management.
-  Ability to document the procedures and write specifications for developing data models.
-  Highly analytical and process-oriented data analyst with in-depth knowledge of database types, research methodologies, manipulation, and visualization of data.
-  Excellent SQL & PL/SQL skills with both DML and DDL commands and demonstrated ability to write complex queries to analyze data and/or evaluate how information needs might be translated into the back-end database.
-  Experience in Creating Views, stored procedures, DDL/DML Triggers, and User-Defined Functions to implement Business Logic and Data Protection.
-  Experience working with various relational database management systems such as MS SQL Server, Oracle, Teradata, DB2, and MS Access.

✚ Experience in creating KPI dashboards on Excel, Tableau, and Cognos reports.

TECHNICAL SKILLS:

Reporting & Analysis Tools:	SSRS (SQL Server Reporting Services), Power BI, Tableau
ETL Tools:	SSIS (SQL Server Integration Services), Tableau
Programming Languages:	T-SQL, PL/SQL, DAX, Python
Database:	T-SQL, PL/SQL, SSIS/SSRS/SSAS, Power BI, Tableau, Azure
Methodologies:	MS Project, SQL Profiler, Toad, Teams, Agile, Jira, Waterfall, SQL

PROFESSIONAL EXPERIENCE:

Client: Sutherland Global Services | September 2021 – November 2022 |

Role: Data Analyst

Responsibilities:

- ✚ Involved in migration projects to migrate data from data warehouses on Oracle/DB2 and migrated those to Teradata.
 - ✚ Designed, implemented, and automated modeling and analysis procedures for existing and experimentally created data.
 - ✚ Implemented a job that leads an electronic medical record, extracts data into an Oracle Database, and generates an output.
 - ✚ Using the Model Mart approach, I used the Model Manager Option in Erwin to synchronize the data models.
 - ✚ Parsed data, producing concise conclusions from raw data in a clean, well-structured, and easily maintainable format. Developed clustering models for customer segmentation using Python.
 - ✚ Developed data mapping documents between Legacy, Production, and User Interface Systems.
 - ✚ Reverse engineering the reports and identifying Data Elements (in the source system). Dimensions, Facts, and Measures required for reports.
 - ✚ Developed logical and Physical data models using ER Win to design OLTP systems for different applications.
 - ✚ Building ETL jobs using the PySpark API with Jupyter notebooks in the on-premise cluster for certain transformation needs and HDFS as a data storage system.
 - ✚ Using forward engineering, I worked with the DBA group to create the best fit for the physical data model with DDL from the logical data model.
 - ✚ Analyzed the data and provided insights about the customers using Tableau.
 - ✚ Developed Data Migration and Cleansing rules for the Integration Architecture (OLTP, ODS, DW)
 - ✚ Used Teradata utilities such as Fast Export and Multi LOAD to handle various tasks.
 - ✚ Created dynamic linear models to perform trend analysis on customer transactional data in Python.
 - ✚ Developed an Object model in UML for a Conceptual Data Model using Enterprise Architect.
 - ✚ Created entity process association matrices using Zachman Framework, functional decomposition diagrams, and data flow diagrams from business requirements documents.
 - ✚ Worked with the ETL team to document the transformation rules for data migration from OLTP to the Warehouse environment for reporting purposes.
 - ✚ Generated comprehensive analytical reports by running SQL queries against current databases to conduct data analysis.
 - ✚ Generated ad-hoc reports using Crystal Reports 9 and SQL Server Reporting Services (SSRS).
- Environment:** Teradata SQL Assistant, Teradata Loading utilities (Bteq, FastLoad, Multi Load), Python, UNIX, Tableau, MS Excel, MS PowerPoint, Business Objects, Oracle

Client: Bose Technology INDIA | May 2019 – August 2021 |

Role: Data Analyst

Responsibilities:

-  I worked on performing quantitative analysis for credit portfolios, data quality control, and data profiling.
-  Developed interactive dashboards and storyboards in Tableau to explore credit portfolio data and report insights to the manager.
-  Performed exploratory data analysis and identified data patterns that can translate into business rules.
-  Deployed MS SQL Server platform to store, transform, and query data for data analysis and reporting.
-  Wrote T-SQL queries involving multiple joins, subqueries, and common table expressions to perform data aggregation for reporting.
-  Used ETL tool SSIS to extract data from both external and internal sources, including CSV, JSON, and Excel, and load data into the database.
-  I worked on monitoring email delivery statistics and optimizing email efficiency to increase customer engagement.
-  Set up automated systems using Excel VBA to pull the data smoothly into the Tableau platform to create reports and dashboards.
-  Collected data from internal sources using MySQL and performed data cleaning and aggregation for reporting and further analysis.
-  Manipulated data and calculated key metrics for reporting using MySQL queries (window function, subqueries) and MS Excel.
-  Visualized data from MySQL and MS Excel using Tableau Dashboard to monitor email performance. connected to a MySQL database using MySQL and retrieving data for statistical analysis and visualization.

Environment: MS SQL, T-SQL, Excel VBA, SSIS, Tableau, MS Excel
